

DATE: 1 February 2022

I.T.L. (PRODUCT TESTING) LTD.
FCC/IC Radio Test Report
for
Amimon Ltd.

Equipment under test:

Draco RX

AMN42012

Tested by:

M. Zohar

Approved by:

D. Shidlow

This report must not be reproduced, except in full, without the written
permission of I.T.L. (Product Testing) Ltd.

This report relates only to items tested.

Measurement/Technical Report for **Amimon Ltd.**

Draco RX

AMN42012

FCC ID: VQSAMN42012
IC: 7680A-AMN42012

This report concerns:

Original Grant:

Class I Change:

Class II Change: X

Equipment type:

FCC: (NII) Unlicensed National Information
Infrastructure TX

ISED: WLAN

Limits used:

47CFR15, Part 15, Subpart E, Section 15.407

RSS 247, Issue 2, February 2017, Section 5

RSS-Gen, Issue 5, April 2018

Measurement procedure used is KDB 789033 D02 v02, ANSI C63.10:2013 and
RSS-Gen, Issue 5, April, 2018.

Application for Certification

Applicant for this device (different from

1 General Information

1.1 Administrative Information

Manufacturer:	Amimon Ltd.
Manufacturer's Address:	26 Zarhin St., Ra'anana 4366250, Israel
Manufacturer's Representative	Gabi Nocham
Equipment Under Test (E.U.T):	Draco RX
Equipment PMN:	AMN42012
Equipment Serial No.:	Not designated
Equipment HVIN:	AMN42012/AMN42012EX
Equipment FVIN:	7.5.15
Date of Receipt of E.U.T:	May 11, 2021
Start of Test:	May 11, 2021
End of Test:	July 20, 2021
Test Laboratory Location:	I.T.L (Product Testing) Ltd. 1 Bat Sheva St., Lod 7120101, Israel 47CFR15, Part 15, Subpart E, Section 15.407
Test Specifications:	RSS 247, Issue 2, February 2017, Section 5 RSS-Gen, Issue 5, April 2018

1.2 List of Accreditations

The EMC laboratory of I.T.L. is accredited by the following bodies:

1. The American Association for Laboratory Accreditation (A2LA) (U.S.A.),
Certificate No. 1152.01.
2. The Federal Communications Commission (FCC) (U.S.A.),
FCC Designation No. IL1005.
3. The Israel Ministry of the Environment (Israel),
Registration No. 1104/01.
4. Department of Innovation, Science and Economic Development (ISED)
Canada, CAB identifier: IL1002

I.T.L. Product Testing Ltd. is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this test report have been determined in accordance with I.T.L.'s terms of accreditation unless stated otherwise in the report.

1.3 Product Description

The Draco system provides high-end, high performance wireless HD video connection that can operate in challenging unmanned environment.

The AMN41012 is the video source unit, which is connected to a camera to capture video signals and to transmit these signals to its companion device AMN42012, thus, creating a wireless video link.

The AMN42012 is the video display unit that receives the video information transmitted from a video transmitter such as the AMN41012 unit, for example, and transfers the images to various types of computer monitors/displays. This enables the user or camera operator to monitor the video transmitted from the remote camera connected to the companion device AMN41012, for example.

1.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures in KDB 789033 D02 v02, and ANSI C63.10: 2013, RSS-Gen, Issue 5, April 2018. Radiated testing was performed at an antenna-to-EUT distance of 3 meters.

1.5 Test Facility

Emissions tests were performed at I.T.L.'s testing facility located in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by A2LA, certificate No. 1152.01, and its FCC designation number is IL1005.

1.6 Measurement Uncertainty

Conducted Emission

Conducted Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4)

0.15 – 30 MHz:

Expanded Uncertainty (95% Confidence, K=2):

± 3.44 dB

Radiated Emission

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for open site:

30-1000MHz:

Expanded Uncertainty (95% Confidence, K=2):

± 4.96 dB

1 GHz to 6 GHz

Expanded Uncertainty (95% Confidence, K=2):

±5.19 dB

>6 GHz

Expanded Uncertainty (95% Confidence, K=2):

±5.51 dB

2 System Test Configuration

2.1 Justification

1. The E.U.T contains a UNII 1, 2A, 2C and 3, certified as FCC /IC (FCC ID: VQSAMN42012; IC: 7680A-AMN42012).
2. The customer has asked to add performance of 20MHz to the existing 40MHz Grant.
3. This report destination is to check C2PC compliance, according to the agreed test plan between the customer and the TCB (Timco Engineering Inc.).

2.2 EUT Exercise Software

No special exercise software was used.

2.3 Special Accessories

No special accessories were used

2.4 Equipment Modifications

No modifications were necessary to achieve compliance.

2.5 Configuration of Tested System

Figure 1. Configuration of Tested System - Conducted

Figure 2. Configuration of Tested System - Radiated

3 Conducted and Radiated Measurement Test Setup Photos

See a separate file.

4 Maximum Conducted Output Power

4.1 Test Specification

FCC, Part 15, Subpart E, Section 407

RSS 247, Issue 2, Section 6.2

4.2 Test Procedure

(Temperature (22°C)/ Humidity (57%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=31.5 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

Spectrum setting done according KDB 789033 d02 v01, method SA-1 instructions (section 2.b).

4.3 FCC Test Limits

UNII1: 15.407(a)(1)(iv): For client devices in the 5.15-5.25 GHz band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi.

UNII2: 15.407(a)(2) For the 5.25-5.35 GHz and 5.47-5.725 GHz bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or $11 \text{ dBm} + 10 \log B$, where B is the 26 dB emission bandwidth in megahertz.

UNII3: 15.407(a)(3)(i) For the band 5.725-5.850 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W.

Note: Special requirements provided for fixed point-to-point UNII devices

All UNII: If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

4.4 ISSED Test Limit

ISED: RSS-247

UNII1: 6.2.1.1: For other than OEM devices installed in vehicles, the maximum e.i.r.p. shall not exceed 200 mW or $10 + 10 \log 10B$, dBm, whichever power is less. B is the 99% emission bandwidth in megahertz.

UNII2:

5250-5350MHz:

6.2.2.1(a): The maximum conducted output power shall not exceed 250 mW or $11 + 10 \log 10B$, dBm, whichever is less.

6.2.2.3: Outdoor fixed devices with a maximum e.i.r.p. greater than 200 mW shall comply with the e.i.r.p. levels at different elevations angles.

Therefore, devices equal or below 200mW eirp are exempt from meeting eirp at different elevation angles.

5470-5600MHz and 5650-5725MHz:

6.2.3.1: The maximum conducted output power shall not exceed 250 mW or $11 + 10 \log_{10} B$, dBm, whichever is less.

The maximum e.i.r.p. shall not exceed 1.0 W or $17 + 10 \log_{10} B$, dBm, whichever is less. B is the 99% emission bandwidth in megahertz.

UNII3:

6.2.4.1: The maximum conducted output power shall not exceed 1 W. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the output power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi

4.5 Test Results for Antenna Gain 2dBi

Band U-NII 1, 5150MHz-5250MHz						
BW	Operation Frequency	Port Reading	Antenna Gain	EIRP	Limit	Margin
(MHz)	(MHz)	(dBm)	(dBi)	(dBm)	(dBm)	(dB)
20.0	5180.0	17.7	2.0	19.7	22.6	-2.9
	5220.0	18.4		20.4		-2.2
	5240.0	18.5		20.5		-2.1

*Note: EIRP includes the port reading and AG of 2dBi

Limit is determined by lowest limit of FCC and ISSED: 22.6dBm eirp by ISSED (FCC limit is 23.9dBm conducted, ISSED limit is $\min(23, 10+10\log B)$, where $B \sim 18\text{MHz}$)

Figure 3 Test Results, U-NII 1

Band U-NII 2A, 5250MHz-5350MHz						
BW	Operation Frequency	Port Reading	Antenna Gain	EIRP	Limit	Margin
(MHz)	(MHz)	(dBm)	(dBi)	(dBm)	(dBm)	(dB)
20.0	5260.0	20.3	2.0	22.3	23.0	-0.7
	5280.0	20.4		22.4		-0.6
	5320.0	20.2		22.2		-0.8

*Note: EIRP includes the port reading and AG of 2dBi

Limit is determined by ISSED: 200mW eirp regardless of eirp power at elevation angles

Figure 4 Test Results, U-NII 2A

Band U-NII 2C, 5470MHz-5725MHz				
BW	Operation Frequency	Port Reading	Limit	Margin
(MHz)	(MHz)	(dBm)	(dBm)	(dB)
20.0	5500.0	20.2	23.6	-3.4
	5580.0	20.7		-2.9
	5600.0	17.8		-5.8
	5720.0	20.7		-2.9

*Note: EIRP includes the port reading and AG of 2dBi

Limits for conducted power are the same for ISED and FCC

Figure 5 Test Results, U-NII 2C

Band U-NII 3, 5725MHz-5850MHz								
BW	Operation Frequency	Port Reading	Limit (conducted)	Margin	Antenna Gain	EIRP	Limit (Radiated)	Margin
(MHz)	(MHz)	(dBm)	(dBm)	(dB)	(dBi)	(dBm)	(dBm)	(dB)
20.0	5740.0	21.4	30.0	-8.6	2	23.4	36.0	-12.6
	5800.0	20.7		-9.3		22.7		13.3
	5840.0	20.4		-9.3		22.4		-13.6

*Note: EIRP includes the port reading and AG of 2dBi

Limits for conducted power are the same for ISED and FCC

Figure 6 Test Results, U-NII 3

4.6 Test Results for Antenna Gain 11dBi

Band U-NII 1, 5150MHz-5250MHz						
BW	Operation Frequency	Port Reading	Antenna Gain	EIRP	Limit	Margin
(MHz)	(MHz)	(dBm)	(dBi)	(dBm)	(dBm)	(dB)
20.0	5180.0	11.6	11.0	22.6	22.6	0.0
	5220.0	11.2		22.2		-0.4
	5240.0	11.4		22.4		-0.2

*Note: EIRP includes the port reading and AG of 11dBi

Limit is determined by ISED requirements of: $10+10\log B$, where $B \approx 18\text{MHz}$

Figure 7 Test Results, U-NII 1

Band U-NII 2A, 5250MHz-5350MHz						
BW	Operation Frequency	Port Reading	Antenna Gain	EIRP	Limit	Margin
(MHz)	(MHz)	(dBm)	(dBi)	(dBm)	(dBm)	(dB)
20.0	5260.0	11.3	11.0	22.3	23.0	-0.7
	5280.0	11.4		22.4		-0.6
	5320.0	11.0		22.0		-1.0

Figure 36 Test Equipment Used

5 Maximum Power Spectral Density (PSD)

5.1 Test Specification

FCC, Part 15, Subpart E, Section 407

RSS 247, Issue 2, Section 6.2

5.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.5dB). Special attention was taken to prevent Spectrum Analyzer RF input overload. Spectrum setting done according KDB 789033 d02 v01 instructions (section F).

5.3 FCC Test Limits

UNII1: 15.407(a)(1)(iv):

For client devices in the 5.15-5.25 GHz band, the maximum power spectral density shall not exceed 11 dBm in any 1 MHz band.

UNII2: 15.407(a)(2):

For the 5.25-5.35 GHz and 5.47-5.725 GHz bands:

the maximum conducted power spectral density shall not exceed 11 dBm in any 1 megahertz band.

UNII3: 15.407(a)(3)(i):

For the band 5.725-5.850 GHz, the maximum conducted power spectral density shall not exceed 30 dBm in any 500-kHz band.

Note: special requirements provided for fixed point-to-point U-NII devices

All UNII: If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

5.4 ISED Test Limit

UNII1: RSS-247:

6.2.1.1: The e.i.r.p. spectral density shall not exceed 10 dBm in any 1.0 MHz band.

UNII2:

5250-5350MHz: RSS-247: 6.2.2.1(a): The conducted power spectral density shall not exceed 11 dBm in any 1.0 MHz band;

5470-5600MHz and 5650-5725MHz:RSS-247: 6.2.3.1

The conducted power spectral density shall not exceed 11 dBm in any 1.0 MHz band.

UNII3:

RSS-247: 6.2.4.1: The output power spectral density shall not exceed 30 dBm in any 500 kHz band.

If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the output power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

5.5 Test Results for PSD with Antenna Gain 2dBi

Band U-NII 1, 5150MHz-5250MHz						
BW	Operation Frequency	Port Reading	Antenna Gain	Total PSD*	Limit	Margin
(MHz)	(MHz)	(dBm/MHz)	(dBi)	(dBm/MHz)	(dBm/MHz)	(dB)
20.0	5180.0	6.9	2.0	8.9	10	-1.1
	5220.0	7.7		9.7		-0.3
	5240.0	7.7		9.7		-0.3

*Note: EIRP includes the port reading and AG of 2dBi

Limit is determined by ISED limitation

Figure 37 Test Results, U-NII 1

Band U-NII 2A, 5250MHz-5350MHz						
BW	Operation Frequency	Port Reading	Limit	Margin	Antenna Gain	EIRP

6 Band Edge

6.1 Test Specification

FCC Part 15, Subpart E, Section 15.407(b)(1-7)

RSS 247, Sections 6.2.1.2

RSS-Gen, Issue 4, November 2014

6.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

Testing was performed for both Radiated Emission for Emissions in the Non-Restricted Bands & in the Restricted Bands:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

- For band edge emissions that falls near the restricted band section II.G.1c applied with measuring methods as described in section II.G.5 (b) and II.G.6 (Method AD) of KDB 789033 D02
- For band edge emissions that falls outside the restricted band section II.G.2c and 2diii were applied with measuring methods as described in section II.G.5 (b) of KDB 789033 D02

Evaluation was performed for 20.0 MHz BW transmissions.

The highest radiations are described in the tables below.

6.3 Test Limits

Operating Band (MHz)	Tested frequency/range (MHz)	Up band edge (Non restricted band) (dBm)	Low Band edge (restricted band) (dBm)
5150-5250	5149.5	NA	Peak: -21.2(74dBuV/m@3m) Avg: -41.2(54dBuV/m@3m)
5250-5350	5350.5	Peak: -21.2(74dBuV/m@3m) Avg: -41.2(54dBuV/m@3m)	NA
5470-5725	5469.5	NA	Peak: -21.2(74dBuV/m@3m) Avg: -41.2(54dBuV/m@3m)
5725-5850	5850-5855	27 dBm/MHz at frequencies from the band edges decreasing linearly to 15.6 dBm/MHz at 5 MHz above or below the band edges	NA
	5855-5875	15.6 dBm/MHz at 5 MHz above or below the band edges decreasing linearly to 10 dBm/MHz at 25 MHz above or below the band edges;	NA

Operating Band (MHz)	Tested frequency/range (MHz)	Up band edge (Non restricted band) (dBm)	Low Band edge (restricted band) (dBm)
	5875-5925	10 dBm/MHz at 25 MHz above or below the band edges decreasing linearly to -27 dBm/MHz at 75 MHz above or below the band edges; and -27 dBm/MHz at frequencies more than 75 MHz above or below the band edges.	NA

*The emission measurements shall be performed using a minimum resolution bandwidth of 1 MHz. A lower resolution bandwidth may be employed near the band edge, when necessary, provided the measured energy is integrated to show the total power over 1 MHz.

In addition, according to RSS-247, Section 6.2.1.2, any unwanted emission that falls into the 5250-5350 MHz band shall be attenuated below the channel power by at least 26 dB, when measured using a resolution bandwidth between 1 and 5% of the occupied bandwidth (i.e. 99% bandwidth), above 5250 MHz.

6.4 Test Results

JUDGEMENT: Passed

The EUT met the requirements of the F.C.C. Part 15, Subpart E, Section 15.407(b)(1-7) and RSS 247, Sections 6.2.1(2), 6.2.2(2), 6.2.3(2), 6.2.4(2) specifications.

For details see Figure 72 to Figure 107.

7 Undesirable/Unwanted Emissions

7.1 Test Specification

Part 15, Subpart E, 15.407(b)

RSS 247, Issue 2, Section 6.2.4.2, RSS-Gen, Issue 5: 2018, Section 8.9

7.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

Testing was performed for both Radiated Emission for Emissions in the Non-Restricted Bands & in the Restricted Bands:

For measurements between 0.009-30MHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The frequency range 0.009-30MHz was scanned.

For measurements between 30-1000MHz:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 30-1000MHz was scanned and the list of the highest emissions was verified and updated accordingly.

For measurements between 1-40GHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The frequency range 1.0-40.0 GHz was scanned.

Evaluation was performed for 20.0 MHz BW transmissions.

The highest radiations are described in the tables below.

7.3 FCC&ISED Test Limits

Frequency ranges from band edge	EIRP limit	EIRP limit
(MHz)	(dBm/MHz)	(dBμV/m/MHz@3m)
±5.0	27.0 decreasing linearly to 15.6	122.2 decreasing linearly to 110.8
±5.0±25.0	15.6 decreasing linearly to 10.0	110.0 decreasing linearly to 105.2
±25.0±75.0	10.0 decreasing linearly to -27.0	105.2 decreasing linearly to 68.2
±75.0	-27.0.0	68.2

Figure 109 FCC and IC Non-Restricted Band Limits

Frequency (MHz)	Field strength (microvolts/meter)	Measurement distance (meters)	Field strength (dB μ V/m)	Field strength* (dB μ V/m) @ 3m
0.009-0.490	2400/F(kHz)	300	48.5-13.8	128.5-73.8
0.490-1.705	24000/F(kHz)	30	33.8-23.0	73.8-63.0

Figure 113 Test Equipment Used

7.6 Field Strength Calculation

The field strength is calculated directly by the EMI Receiver software, and a "Correction Factors", using the following equation:

$$FS = RA + AF + CF$$

FS: Field Strength [dB μ V/m]

RA: Receiver Amplitude [dB μ V]

AF: Receiving Antenna Correction Factor [dB/m]

CF: Cable Attenuation Factor [dB]

Example: $FS = 30.7 \text{ dB}\mu\text{V (RA)} + 14.0 \text{ dB (AF)} + 0.9 \text{ dB (CF)} = 45.6 \text{ dB}\mu\text{V}$

No external pre-amplifiers are used.

8 Occupied Bandwidth

8.1 Test Specification

FCC, Part 2, Sub part J, Section 2.1049

RSS-Gen, Issue 5: 2014, Section 6.6

8.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.5dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The RBW set to the range of 1% -5% of the OBW. The span was set to 1.5-5 times of the OBW.99% occupied bandwidth function was set on.

10 6 dB Minimum Bandwidth

10.1 Test Specification

FCC Part 15, Subpart E, Section 407(e)

RSS 247, Issue 2, Section 6.2.4

1.1 Test Procedure

10.2 (Temperature (22°C)/ Humidity (61%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=31.5 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The spectrum bandwidth of the E.U.T. at the point of 6 dB below maximum peak power was measured and recorded. The RBW was set to 100 kHz.

10.3 Test Limit

For systems using digital modulation techniques that operate in the 5725-5850 MHz band. The minimum 6 dB bandwidth shall be at least 500 kHz.

10.4 Test Results

Declared EBW	Operation Frequency	Reading	Limit
[MHz]	(MHz)	(MHz)	(kHz)
Band U-NII 3, 5725-5850MHz			
20.0	5740MHz	17.7 MHz	>500.0
20.0	5800MHz	17.82 MHz	>500.0
20.0	5840MHz	17.86 MHz	>500.0

Figure 146 Test Equipment Used

11 Antenna Gain/Information

11.1 Test Specification

FCC, Part 15, Subpart B. section 212 (a)(iv)

11.2 Test Limit

The modular transmitter must comply with the antenna and transmission system requirements of §§15.203, 15.204(b) and 15.204(c). The antenna must either be permanently attached or employ a “unique” antenna coupler (at all connections between the module and the antenna, including the cable).

11.3 Test Results

Model	Type	Antenna Gain	Impedance
VT5-7.5G-R-1	Dipole	2 dBi	50Ω
WSS002	Dipole	2 dBi	50Ω
AMN5330	Directional Antenna	11 dBi	50Ω

Figure 147 Antenna Gain Results

Judgment: Passed

2dBi antenna with RP-SMA connector type

12 R.F Exposure/Safety

The device's intended use is to operate in a user home environment, linked to the home router, allowing a two way video call and upload of files to the network.

The typical distance between the E.U.T. and the user is at least 20cm. Transmission occurs when the device is placed on a surface.

Calculation of Maximum Permissible Exposure (MPE)

Based on 47CFR1 Section 1.1307(b)(1) and RSS 102 Issue 5, Table 4 Requirements

- (a) FCC: The limit for the 5.0 GHz band is: $1 \frac{mW}{cm^2}$

Using Table 1 of 47CFR1 Section 1.1310 limit for general population/uncontrolled exposures, the above levels are an average over 30 minutes.

The power density produced by the E.U.T. is:

$$S = \frac{P_t G_t}{4\pi R^2}$$

P_t = Conducted Transmitted Power 21.4 dBm = 138.04 mW

G_t = Antenna Gain 11dBi = 12.59 numeric

R = Distance From Transmitter 20 cm

The peak power density produced by the E.U.T. is:

$$S = 138.04 * 12.59 / 4\pi(20)^2 = 0.034 \text{ mW/cm}^2$$

This is below the FCC limit.

- (b) ISED: The limit: 300-6000MHz = $0.02619 \times f^{0.6834} \text{ W/m}^2 = 0.02619 \times 5840^{0.6834} \text{ W} = 0.02619 \times 374.9 = 9.8 \text{ W/m}^2$

The peak power density produced by the E.U.T. is

$$S = 0.138 * 12.59 / 4\pi(0.2)^2 = 3.46 \text{ W/m}^2$$

This result is below the ISED limit.

13 APPENDIX A - CORRECTION FACTORS
