Measurement/Technical Report for
Amimon Ltd.
Wireless Video Transmission Module
AMNPTTX01

FCC ID: VQSAMNPTTX01

IC: 7680A-AMNPTTX01

This report concerns: Class II Permissive Change

Equipment type: FCC: Unlicensed National Information (UNII)

Infrastructure: TX

ISED: WLAN

Limits used: 47CFR15, Part 15, Subpart E, Section 15.407

RSS-247, Issue 2, February 2017, Section 5

RSS-Gen, Issue 5, April 2018, AMD1:2019, AMD2:2021

Measurement procedure used: KDB 789033 D02 v02, ANSI C63.10:2013

RSS-Gen, Issue 5, April 2018.

Certification application prepared by:

R. Ezrah

1 General Information

1.1 Administrative Information

Manufacturer:	Amimon Ltd.
Manufacturer's Address:	26 Zarhin St., Ra'anana 4366250, Israel
Manufacturer's Representative	Gabi Nocham
Equipment Under Test (E.U.T):	Wireless Video Transmission Module
Equipment PMN:	AMNPTTX01
Equipment Serial No.:	Not designated
Equipment HVIN:	AMN7.5.11
Equipment FVIN:	N/A
Date of Receipt of E.U.T:	August 23, 2021
Start of Test:	August 23, 2021
End of Test:	May 04, 2022
Test Laboratory and Location:	I.T.L. (Product Testing) Ltd. 1 Bat Sheva St., Lod 7110603, Israel

1.2 List of Accreditations

The EMC laboratory of I.T.L. is accredited by the following bodies:

1. The American Association for Laboratory Accreditation (A2LA) (U.S.A.),
Certificate No. 1152.01.
2. The Federal Communications Commission (FCC) (U.S.A.),
FCC Designation No. IL1005.
3. Department of Innovation, Science and Economic Development (ISED)
Canada, CAB identifier: IL1002

I.T.L. Product Testing Ltd. is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this test report have been determined in accordance with I.T.L.'s terms of accreditation unless stated otherwise in the report.

1.3 Product Description

The E.U.T. provides high-end, high performance, wireless HD video transmission that operates in challenging unmanned environment.

The AMNPTTX01 is the video source unit, which is connected to a camera to capture video signals and to transmit these signals to its companion device, like the AMN42012 thus creating a wireless video link at the 5GHz band.

Supply Voltage Range	5V _{DC} ± 10%
Mode of operation	Transceiver, two ports
Modulations	OFDM
Assigned Frequency Range	5150-5250 MHz, 5250-5350 MHz, 5470-5725 MHz, 5725-5850 MHz
Operating Frequency Range	5150-5250 MHz, 5250-5350 MHz, 5470-5725 MHz, 5725-5850 MHz
Total transmit power (conducted)	~22.0dBm
Antenna Gain	2.0dBi (dipole)
Modulation BW	20/40 MHz

1.4 Test Methodology

Both conducted and radiated emissions testing were performed according to the procedures in KDB 789033 D02 v02, ANSI C63.10: 2013, RSS-247, Issue 2, February 2017, Section 5, and RSS-Gen, Issue 5, April 2018, AMD1:2019, AMD2:2021.

Radiated emissions testing was performed at an antenna-to-EUT distance of three meters.

1.5 Test Facility

Emissions tests were performed at I.T.L.'s testing facility in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by the A2LA, certificate No. 1152.01. Its FCC Designation Number is IL1005.

1.6 Measurement Uncertainty

Conducted Emission

Conducted Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4)

0.15 – 30 MHz:

Expanded Uncertainty (95% Confidence, K=2): ± 3.44 dB

Radiated Emission

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for open site:

30-1000MHz:

Expanded Uncertainty (95% Confidence, K=2): ± 4.96 dB

1 GHz to 6 GHz

Expanded Uncertainty (95% Confidence, K=2): ±5.19 dB

>6 GHz

Expanded Uncertainty (95% Confidence, K=2): ±5.51 dB

2 System Test Configuration

2.1 Justification

1. The E.U.T. is an approved UNII 1,2 3 transceiver module (FCC ID: VQSAMNPTTX01; IC: 7680A-AMNPTTX01) using 20 MHz or 40 MHz BWs.
2. This report's purpose is to check C2PC compliance. The rationale for C2PC is as follows:
 - a. Adding the usage of UNII2 C frequencies at 5710 MHz for the 40 MHz BW, and 5720 MHz for 20 MHz BW.
 - b. Re-arranging the channels at UNII3 for 40MHz and 20 MHz BW. Full tests were done on the band's lowest and highest frequencies. As the middle frequency was covered in the original grant, only power and radiated emissions were tested for verification purpose.
 - c. Update the test reports to RSS-247 Issue 2: 2017 for UNII2 and UNII3, regarding power and emissions - output power is generally lower than what appears in the original reports. Radiated emissions were repeated on the edges to confirm compliance with the tested power.
 - d. Adding variants under the same Grant with identical RF sections.
3. The following is our suggested test procedure:
 - UNII2:
 - Full tests at frequencies 5710MHz/40MHz BW and 5720MHz/20MHz BW
 - Power measurements at the test frequencies of:
 - 40MHz: 5270MHz, 5310MHz, 5510MHz, 5670MHz
 - 20MHz: 5260MHz, 5280MHz, 5320MHz, 5500MHz, 5580MHz
 - Radiated emissions and Band edge - at the worst-case antenna test frequencies:
 - 40MHz: 5310MHz, 5510MHz, 5670MHz
 - 20MHz: 5260MHz, 5500MHz, 5580MHz
 - UNII3:
 - Full tests at 5740, 5840, 5750, 5830 MHz, with both antenna types.
 - Power and emissions will be tested in the middle channel (5790MHz, 5780MHz) with the worst-case antenna.

2.2 EUT Exercise Software

No special exercise software was used.

2.3 Special Accessories

No special accessories were used

2.4 Equipment Modifications

No modifications were necessary in order to achieve compliance.

2.5 Configuration of Tested System

Figure 1. Configuration of Tested System - Conducted

Figure 2. Configuration of Tested System - Radiated

3 Conducted and Radiated Measurement Test Setup Photos

See a separate file.

4 Conducted Emission from AC Mains

4.1 Test Specification

FCC Part 15, Subpart C, Section 15.207
RSS-Gen, Issue 5: 2018, Clause 8.8

4.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

The E.U.T operation mode and test setup are as described in Section 2 of this report. In order to minimize background noise interference, the conducted emission testing was performed inside a shielded room, with the E.U.T placed on a 0.8 meter high wooden table, 0.4 meter from the room's vertical wall. In the case of a floor-standing E.U.T., it was placed on the horizontal ground plane.

The E.U.T was powered from 115 V AC / 60 Hz via 50 Ohm / 50 μ Hn Line Impedance Stabilization Network (LISN) on the phase and neutral lines. The LISN's were grounded to the shielded room ground plane (floor), and were kept at least 0.8 meters from the nearest boundary of the E.U.T.

The center of the E.U.T.'s AC cable was folded back and forth, in order to form a bundle less than 0.40 meters and a total cable length of 1 meter.

The effect of varying the position of the cables was investigated to find the configuration that produces maximum emission.

The emission voltages at the LISN's outputs were measured using a computerized receiver, complying with CISPR 16 requirements. The specification limits are loaded to the receiver and are displayed on the receiver's spectrum display.

The E.U.T was evaluated in TX operation mode.

A frequency scan between 0.15 and 30 MHz was performed at 9 kHz I.F. band width, using peak detection.

The spectral components having the highest level on each line were measured using a quasi-peak and average detector.

4.3 Test Limit

Frequency of Emission (MHz)	Conducted Limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

* Decreases with the logarithm of the frequency.

4.4 Test Results

JUDGEMENT: Passed by -9.00 dB

The margin between the emission levels and the specification limit is, in the worst case, -16.99 dB for the phase line at 18.70 MHz, and -9.00 dB at 24.022 MHz for the neutral line.

The EUT met the FCC Part 15, Subpart C and RSS-Gen specifications requirements.

The details of the highest emissions are given in *Figure 3* to *Figure 6*.

RSS-Gen, Issue 5: 2018, Section 6.7; RSS-247: 2017, Section 6

5.2 Test Procedure

(Temperature (20°C)/ Humidity (48%RH))

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.5dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The RBW set to the range of 1% -5% of the OBW. The span was set to 1.5-5 times of the OBW 99% occupied bandwidth function was set on.

7.2 Test Procedure

(Temperature (22°C)/ Humidity (61%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=31.5 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The spectrum bandwidth of the E.U.T. at the point of 6 dB below maximum peak power was measured and recorded. The RBW was set to 100 kHz.

7.3 Test Limit

For systems using digital modulation techniques that operate in the 5725-5850 MHz band. The minimum 6 dB bandwidth shall be at least 500 kHz.

7.4 Test Results

Declared EBW	Operation Frequency	Reading

(Temperature (22°C)/ Humidity (57%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=31.5 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

Spectrum setting done according KDB 789033 d02 v01, method SA-1 instructions (section 2.b).

8.3 FCC Test Limits

Operational Band U-NII 2A, 2C:

15.407(a) (2) For the 5.25-5.35 GHz and 5.47-5.725 GHz bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or 11 dBm + 10 log B, where B is the 26 dB emission bandwidth in megahertz.

Operational Band U-NII 3:

15.407(a) (3) (i) For the 5.725-5.850 GHz band, the maximum conducted output power over the frequency band of operation shall not exceed 1 W. the maximum conducted power spectral density shall not exceed 30 dBm in any 500-kHz band

8.4 ISSED Test Limit

Operational Band U-NII 2A:

- The maximum conducted output power shall not exceed 250 mW or 11 + 10 log10B, dBm, whichever is less. assuming antenna gain does not exceed 6dBi.
- Devices, other than outdoor fixed devices, having an E.I.R.P. greater than 200 mW shall comply with E.I.R.P. elevation mask or implement a method to permanently reduce their E.I.R.P. via a firmware feature in case the Department requires it.

Operational Band U-NII 2C:

The maximum conducted output power shall not exceed 250 mW or 11 + 10 log10B, dBm, whichever is less, assuming antenna gain does not exceed 6dBi.

Operational Band U-NII 3:

The maximum conducted output power shall not exceed 1W. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the output power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi

9.1 Test Specification

FCC, Part 15, Subpart E, Section 407

RSS-247, Issue 2: 2017, Section 6.2

9.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.5dB). Special attention was taken to prevent Spectrum Analyzer RF input overload. Spectrum setting done according KDB 789033 d02 v01 instructions (section F).

9.3 FCC Test Limits

Operational Band U-NII 2A, 2C:

For devices in the 5.25-5.35 GHz and 5.47-5.725GHz bands the maximum power spectral density shall not exceed 11 dBm in any 1-megahertz band, provided the maximum antenna gain does not exceed 6 dBi. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Operational Band U-NII 3:

For devices in the 5.725-5.85 GHz band, the maximum power spectral density shall not exceed 30dBm in any 500KHz band provided the maximum antenna gain does not exceed 6 dBi. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Note: Special requirements provided for fixed, point-to-point U-NII devices

9.4 ISED Test Limit

Operational Band U-NII 2A, 2C:

For devices in the 5.25-5.725 GHz band, the maximum conducted spectral density shall not exceed 11 dBm in any 1.0 MHz band.

Operational Band U-NII 3:

For devices in the 5.725-5.85 GHz band the maximum conducted spectral density shall not exceed 30 dBm in any 500 kHz band.

10 Band Edge

10.1 Test Specification

FCC Part 15, Subpart E, Section 15.407(b)(1-8)

RSS-247, Issue 2: 2017, Sections 6.2.1.2; RSS-Gen, Issue 5: 2018, Section 6.2

10.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

Testing was performed for both Radiated Emission for Emissions in the Non-Restricted Bands and in the Restricted Bands:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

- For band edge emissions that falls near the restricted band section II.G.1c applied with measuring methods as described in section II.G.5 (b) and II.G.6 (Method AD) of KDB 789033 D02
- For band edge emissions that falls outside the restricted band section II.G.2c and 2diii were applied with measuring methods as described in section II.G.5 (b) of KDB 789033 D02

The highest radiations are described in the plots below.

10.3 Test Limits FCC/ISED

Operating Band	Up band edge (restricted band)	Low Band edge (non-restricted band)
(MHz)	(dBm)	(dBm)
5250-5350	Peak: 74dBuV/m@3m Avg: 54dBuV/m@3m	NA
5470-5725	NA	e.i.r.p. of -27 dBm/MHz(68.2dBuV/m@3m)

Operating Band	Frequency ranges from band edge	EIRP limit	EIRP limit
(MHz)	(MHz)	(dBm/MHz)	(dBuV/m/MHz@3m)
5725-5850	±5.0	27.0 decreasing linearly to 15.6	122.2 decreasing linearly to 110.8
	±5.0±25.0	15.6 decreasing linearly to 10.0	110.0 decreasing linearly to 105.2
	±25.0±75.0	10.0 decreasing linearly to -27.0	105.2 decreasing linearly to 68.2
	±75.0	-27.0.0	68.2

*The emission measurements shall be performed using a minimum resolution bandwidth of 1 MHz. A lower resolution bandwidth may be employed near the band edge, when necessary, provided the measured energy is integrated to show the total power over 1 MHz.

In addition to the IC standard, any unwanted emission that falls into the band 5250-5350 MHz shall be attenuated below the channel power by at least 26 dB, when measured using a resolution bandwidth between 1 and 5% of the occupied bandwidth (i.e. 99% bandwidth), above 5250 MHz

10.4 Test Results

JUDGEMENT: Passed

The EUT met the requirements of the FCC Part 15, Subpart E, Section 15.407(b)(1-8), RSS-Gen: 2018, Section 6.2, and RSS-247, Issue 2: 2017, Sections 6.2.1(2), 6.2.2(2), 6.2.3(2), 6.2.4(2) specifications.

For details see Figure 108 to Figure 141.

11 Undesirable/Unwanted Emissions

11.1 Test Specification

Part 15, Subpart E, 15.407(b)

RSS-247, Issue 2: 2017, Section 6.2.4.2; RSS-Gen, Issue 5: 2018, Section 8.9

11.2 Test Procedure

(Temperature (22°C)/ Humidity (56%RH))

Testing was performed for both Radiated Emission for Emissions in the Non-Restricted Bands & in the Restricted Bands:

For measurements between 0.009-30MHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 0.009-30MHz was scanned.

For measurements between 30-1000MHz:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 30-1000MHz was scanned and the list of the highest emissions was verified and updated accordingly.

For measurements between 1-40GHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 1.0-40.0 GHz was scanned.

Evaluation was performed for 20.0 and 40.0 MHz BW transmissions, and at all operations frequencies. The highest radiations are described in the tables below.

11.3 FCC and ISSED Test Limits

Operation frequency band	Frequency ranges from band edge	EIRP limit	EIRP limit

30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz Radiated emission limits in these three bands are based on measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

Figure 144 FCC Restricted Band Limits

Frequency (MHz)	Magnetic Field strength (microampere/meter)	Measurement distance (meters)	Magnetic Field strength (dBμA/m)	Magnetic Field strength* (dBμA/m) @ 3m
0.009-0.490	6.37/F(kHz)	300	-3.0-(-37.7)	77.0-42.2

11.4 Test Results

JUDGEMENT: Passed

The EUT met the requirements of the FCC Part 15, Subpart E, Section 15.407(b) and RSS-247, Issue 2: 2018, Sections 6.2.1(2), 6.2.2(2), 6.2.3(2), 6.2.4(2) specification.

Radiated Emission

E.U.T Description Wireless Video Transmission Module
Type AMNPTTX01
Serial Number: Not designated

Specifications: FCC, Part 15, Subpart E, Section 15.407(b) and RSS-247, Issue 2: 2018,
Sections 6.2.1(2), 6.2.2(2), 6.2.3(2), 6.2.4(2)

Antenna Polarization: Horizontal/Vertical Frequency Range: 9kHz to 40.0 GHz
Operation BW: 40MHz Detector: Peak, Average

Operation Frequency	Freq.	Pol	Peak Reading	Peak Limit	Peak Margin	Average Reading	Average Limit	Average Margin
(MHz)	(MHz)	(H/V)	(dBμV/m)	(dBμV/m)	(dB)	(dBμV/m)	(dBμV/m)	(dB)
5310.0	21,240.0	V	53.1	74.0	-20.9	50.6	54.0	-3.4
	21,240.0	H	47.8	74.0	-26.2	43.8	54.0	-10.2
5510.0	22,040.0	V	52.1	74.0	-21.9	49.1	54.0	-4.9
	22,040.0	H	47.2	74.0	-6.8	44.2	54.0	-9.8
5670.0	22,680.0	V	49.4	74.0	-24.6	47.1	54.0	-6.9
	22,680.0	H	45.2	74.0	-28.8	43.5	54.0	-10.5
5710.0	No emissions detected above the spectrum analyzer noise level which have at least 10dB margin below the limits							
5750.0								
5790.0								
5830.0								

Figure 146. Radiated Emission Results

Margin refers to the test results obtained minus specified requirement; thus a positive number indicates failure, and a negative result indicates that the product passes the test.

“Peak Amp” includes correction factor.

* “Correction Factor” = Antenna Factor + Cable Loss- Low Noise Amplifier Gain

Radiated Emission

Specifications: FCC, Part 15, Subpart E, Section 15.407(b)(1-7) and RSS-247, Issue 2: 2017,

Figure 156 Test Equipment Used

11.6 Field Strength Calculation

The field strength is calculated directly by the EMI Receiver software, and a "Correction Factors", using the following equation:

$$FS = RA + AF + CF$$

FS: Field Strength [dB μ V/m]

RA: Receiver Amplitude [dB μ V]

AF: Receiving Antenna Correction Factor [dB/m]

CF: Cable Attenuation Factor [dB]

Example: $FS = 30.7 \text{ dB}\mu\text{V (RA)} + 14.0 \text{ dB (AF)} + 0.9 \text{ dB (CF)} = 45.6 \text{ dB}\mu\text{V}$

No external pre-amplifiers are used.

12 Antenna Gain/Information

12.1 Test Specification

FCC, Part 15, Subpart B. section 212 (a)(iv)

12.2 Test Limit

The modular transmitter must comply with the antenna and transmission system requirements of §§15.203, 15.204(b) and 15.204(c). The antenna must either be permanently attached or employ a “unique” antenna coupler (at all connections between the module and the antenna, including the cable).

12.3 Test Results

Model	Type	Antenna Gain	Impedance
AMN_ANT_1010	Dipole	2 dBi	50Ω
AMN_ANT_1012-0	Dipole	0 dBi	50Ω

Figure 157 Antenna Gain Results

Judgment: Passed

2dBi antenna with RP-SMA/UFL connector type.

13 RF Exposure/Safety

See a separate file.

14 APPENDIX A - CORRECTION FACTORS

14.1 For ITL #1911 OATS RF Cable

Frequency (MHz)	Cable Loss (dB)		Frequency (MHz)	Cable Loss (dB)
1.0	0.5		450.00	5.83
10.00	1.0		500.00	6.33
