ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 80, FCC 47 CFR Part 2, ISSED RSS-182 and ISSED RSS-GEN. The sample tested was found to comply with the requirements defined in the applied rules.

EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with FCC 47 CFR Part 80: 2019, FCC 47 CFR Part 2: 2019, ISSED RSS-182: Issue 5 (2012-01) and ISSED RSS-GEN: Issue 5 (2018-04) for the tests detailed in section 1.3.

Statement of Conformity

Jotron AS hereby states that the Tron 40AIS is a variant of the Tron 40VDR AIS.
Testing performed on the Tron 40VDR AIS should in most cases cover Tron 40AIS testing.

On behalf of Jotron AS:

1.6 Product Information

1.6.1 Technical Description

The Equipment under test (EUT) was a Jotron AS Tron 40VDR AIS EPIRB with Float Free capsule.

The primary function of the EUT is an Emergency Position Indication Radio Beacon (EPIRB) within capsule.

Additionally, the EUT has functionality for Automatic Identification System (AIS), GNSS Rx (GPS/Galileo/Glonass), Transmitting 406 MHz, 121.5 MHz Home, RLS and VDR

1.7 Deviations from the Standard

No deviations from the applicable test standard were made during testing.

1.8 EUT Modification Record

The table below details modifications made to the EUT during the test programme.

The modifications incorporated during each test are recorded on the appropriate test pages.

Modification State	Description of Modification still fitted to EUT	Modification Fitted By	Date Modification Fitted
Model: Tron 40VDR AIS, Serial Number: 00039 and 00041			
0	As supplied by the customer	Not Applicable	Not Applicable
1	GNSS LED changed to blink before or after 406MHz to reduce noise on modulation	Manufacturer at TUV SUD site	31-March 2021
2	Addition of a LDO (Low Dropout Regulator) to the TCXO, to reduce the noise coming from the power supply. A resistor of 0 ohm (added to the design for current measurement) was replaced by the three-legged regulator.	Manufacturer	27-April 2021
3	SW update to reduce image AIS frequencies. Parameter in the synthesizer was adjusted to reduce the signal level from the clock.	Manufacturer	21-May 2021

Note: Repair was carried out on sample with Serial Number 00041 on 25-May-2021 to resolve an issue with low power output.

Table 3

1.9 Test Location

TÜV SÜD conducted the following tests at our Fareham Test Laboratory.

Test Name	Name of Engineer(s)	Accreditation
Configuration and Mode: AIS Transceiver		
Bandwidths	Neil Rousell	UKAS
Transmitter Frequency Tolerances	Neil Rousell	UKAS
Spurious Emissions at Antenna Terminals	Neil Rousell	UKAS
Radiated Spurious Emissions	Graeme Lawler	UKAS
Modulation Requirements	Neil Rousell	UKAS

2 Test Details

2.1 Bandwidths

2.1.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.205
FCC 47 CFR Part 2, Clause 2.1049
ISED RSS-GEN, Clause 6.7

2.1.2 Equipment Under Test and Modification State

Tron 40VDR AIS, S/N: 00039 - Modification State 2

2.1.3 Date of Test

13-May-2021

2.1.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.205, Part 2.1049, ISED RSS-GEN Clause 6.7 and KDB 971168.

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using PRBS packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, the RBW of the spectrum analyser was set to at least 1% of the emission bandwidth, the occupied bandwidth measurement function of the analyser was used and the 99% bandwidth recorded.

2.1.5 Environmental Conditions

Ambient Temperature 23.4 °C
Relative Humidity 44.3 %

2.1.6 Test Results

AIS Transceiver

161.975 MHz	162.025 MHz
9.53 kHz	9.45 kHz

Table 5 - Occupied Bandwidth Results

2.2.2 Equipment Under Test and Modification State

Tron 40VDR AIS, S/N: 00039 - Modification State 3

2.2.3 Date of Test

15-June-2021 to 16-June-2021

2.2.4 Test Method

The EUT was modulated using the standard AIS test signal with PRBS packet payload and was transmitting in turn on either AIS channel. The EUT was connected to a spectrum analyser via a cable and attenuator. The external frequency reference of the spectrum analyser was locked to a 10 MHz rubidium frequency standard reference. The 99 % OBW function of the spectrum analyser was used to record the carrier frequency error. The temperature was varied from -30°C to +55° in 10° steps. At 20°C the voltage was also reduced to the manufacturer declared battery endpoint voltage and the carrier frequency measured.

2.2.5 Environmental Conditions

Ambient Temperature 24.7 - 24.9 °C

Tron 40VDR AIS, S/N: 00039 - Modification State 3

2.3.3 Date of Test

11-June-2021 to 01-July-2021

2.3.4 Test Method

For emissions where the frequency is removed less than 250 % of the authorized bandwidth measurements were performed conducted as follows:

The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss between the EUT and analyser was calibrated using a network analyser and entered into the spectrum analyser as a reference level offset. The spectrum analyser was configured with an RBW of 300 Hz with the trace set to max hold using a peak detector. The mask as per FCC CFR 47 Part 80, clause 80.211 (f) was applied.

For emissions where the frequency is removed more than 250 % of the authorized bandwidth measurements were performed both conducted and radiated. Conducted measurements were performed as follows:

A network analyser was used to measure the path loss and the worst case was entered as a reference level offset into the spectrum analyser. The EUT was connected to a spectrum analyser via an attenuator, filter and cable. Between 300 MHz and 2 GHz a 300 MHz high pass filter was used. The spectrum analyser was configured with an RBW of 30 kHz with the trace set to max hold using a peak detector

2.3.5 Environmental Conditions

ISED RSS-GEN, Clause 6.13

2.4.2 Equipment Under Test and Modification State

Tron 40VDR AIS, S/N: 00041 - Modification State 3

2.4.3 Date of Test

08-June-2021

2.4.4 Test Method

Testing was performed in accordance with ANSI C63.26, clause 5.5.4.

A preliminary profile of the Spurious Radiated Emissions was obtained up to the 10th harmonic by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber.

Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

Using the information from the preliminary profiling of the EUT, the list of emissions was then confirmed or updated under Alternative Open Site conditions. Emission levels were maximised by adjusting the antenna height, antenna polarisation and turntable azimuth.

The EUT was set to transmit on maximum power with each channel tested in turn.

2.4.5 Environmental Conditions

Ambient Temperature 20.1 °C
Relative Humidity 53.2 %

2.4.6 Test Results

2.5.2 Equipment Under Test and Modification State

Tron 40VDR AIS, S/N: 00039 - Modification State 3

2.5.3 Date of Test

14-June-2021

2.5.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80, clause 80.213 (d).

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using either PRBS, 01010101 or 00001111 packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, using the FM demodulation function of the spectrum analyser, the peak frequency deviation was observed.

FCC 47 CFR Part 80, Limit Clause 80.213

Ship and coast station transmitters operating in the 156-162 MHz and 216-220 bands must be capable of proper operation with a frequency deviation that does not exceed ± 5 kHz when using any emission authorized by 80.207.

ISED RSS-182, Limit Clause 7.7

The VHF AIS equipment shall comply with the following characteristics.

Transmitter frequency:	161.975 MHz (channel 87B) 162.025 MHz (channel 88B)
Channel spacing:	25 kHz or 12.5 kHz
Modulation scheme:	GMSK/FM
Modulation index:	0.5 max. for 25 kHz channel spacing 0.25 max. for 12.5 kHz channel spacing
Transmission rate:	9600 bps

2.5.7 Test Location and Test Equipment Used

This test was carried out in RF Laboratory 2.

Tron 40VDR AIS, S/N: 00039 - Modification State 2

2.6.3 Date of Test

13-May-2021

2.6.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80, clause 80.215 (e) and KDB 971168.

The EUT was set to transmit on maximum power in turn on either AIS channel. The EUT was modulated using the standard AIS test signal with PRBS packet payload. The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss was measured using a network analyser and entered as a reference level offset in the spectrum analyser. The RBW of the spectrum analyser was set to 100 kHz and the video bandwidth to 300 kHz with the trace set to max hold using a peak detector and the result was recorded

2.6.5 Environmental Conditions

Ambient Temperature 23.5 °C
Relative Humidity 43.7 %

Table 15 - Transmitter Power Results

FCC 47 CFR Part 80, Limit Clause 80.215 (d)

Ship station frequencies above 27500 kHz. The maximum power must not exceed the values listed below:

- Ships Stations: 156 to 162 MHz - 25 W
- Marine Utility Stations and Handheld Portable Transmitters: 156 to 162 MHz - 10 W

ISED RSS-182, Limit Clause 7.5

The output power shall be within ± 1.0 dB of the manufacturer's rated power and not exceed the limits listed in the table below, unless indicated otherwise.

Stations	Typical Power
Coast Station	50 W
Ship Stations Minimum Maximum	6 W 25 W
Hand-held portable transmitters	5 W
Survival two-way radiotelephones	Should have a minimum e.i.r.p of 0.25 W

4 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

Test Name	Measurement Uncertainty
Bandwidths	± 58.05 Hz
Transmitter Frequency Tolerances	± 11 Hz
Spurious Emissions at Antenna Terminals	± 3.45 dB
Radiated Spurious Emissions	30 MHz to 1 GHz: ± 5.2 dB 1 GHz to 18 GHz: ± 6.3 dB
Modulation Requirements	-
Transmitter Power	± 3.2 dB

Table 18

Measurement Uncertainty Decision Rule

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115: 2007, clause 4.4.3 and 4.5.1.
