Subject: Declaration Regarding Simultaneous Transmission for WLAN and Bluetooth
FCC ID: VSFAR4

Federal Communications Commission
7435 Oakland Mills Road - Gate A
Columbia, Maryland 21046

The WLAN and Bluetooth design prevents simultaneous transmission of these radios.

Although users can enable and use WLAN and Bluetooth features at the same time, the co-existence feature of the design shares the antenna between WLAN and Bluetooth, preventing overlapping transmissions.

Please let me know if you have any questions.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Jordan Allen', written over a blue line.

Jordan Allen
Vice President of Engineering
