

Electromagnetic Compatibility Test Report IC RSS-210 & FCC CFR47 Part 15/C 15.247

Report Reference No.: E10671-1401-FCC-IC Rev 2.0
Date of issue: Dec 17 2014
Total number of pages.....: 67

Testing Laboratory.....: Quality Auditing Institute
Address.....: 16 – 211 Schoolhouse Street, Coquitlam, BC, V3K 4X9, Canada

Accreditations (ISO 17025):

Standard Council of Canada: Accredited Laboratory No. 743
International Accreditation Service Inc: Accredited Laboratory: No. TL-239

This report has been completed in accordance with the requirements of ISO/IEC 17025. Test results contained in this report are within QAI Laboratories ISO/IEC 17025 accreditation. QAI Laboratories authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for the use by the company's employees only.

Applicant's name: City Theatrical Inc.
Address.....: 475 Barell Ave. Carlstadt, NJ, USA, 07072
Contact.....: Mr Paul Kleissler
Email.....: Pkleissler@citytheatrical.com
Phone.....: (201)549-1160
Fax.....: (201) 549-1161

Test Standards.....: IC RSS-210 Issue 8
IC RSS-Gen Issue 4
FCC CFR47 Part 15/C 15.247

Test item description.....: Modular Wireless Transceiver
Model Number.....: 5792
Manufacturer.....: City Theatrical Inc.
FCC ID.....: VU65792M
IC: 7480A-5792M

The following tests demonstrate the testimony to "IC and FCC" Mark Electromagnetic compatibility testing for "CTI 5792" manufactured by City Theatrical Inc. The testing was performed pursuant to RSS-210 Issue 8 & FCC CFR47, PART 15/C 15.247

Test	Applicable Standard	Description	Result
Radiated Emissions (Receive Mode)	ICES-003 Issue 5, RSS-Gen Issue 4, FCC Part 15/B Class B	The radiated emissions are measured in the 9kHz-26GHz range	Complies
Channel Bandwidth	RSS-210 Iss.8 A8.1 FCC Part 15/C 15.247	The channel bandwidth is measured at -20dB. Minimum 500kHz for DTS	Complies
Channel Separation	RSS-210 Iss.8 A8.1 FCC Part 15/C 15.247	The channel separation should be greater than the channel BW or 25kHz, whichever is greater	Complies
Number of Hopping Channels	RSS-210 Iss.8 A8.1 FCC Part 15/C 15.247	At least 15 hopping channels	Complies
Occupancy Time	RSS-210 Iss.8 A8.1 FCC Part 15/C 15.247	less than 0.4seconds during a period of 0.4 multiplied by the number of hopping channels	Complies
Output Power	RSS-210 Iss.8 A8.4 FCC Part 15/C 15.247	Maximum Peak Conducted Output power will not exceed 0.125W (21dBm)	Complies
EIRP Emissions	RSS-210 Iss.8 A8.4 FCC Part 15/C 15.247(c)(1)(i)	E.I.R.P. will not exceed: IC: 4W(36dBm) FCC: 0.5W (27dBm)	Complies
Out-of-band Emissions	RSS-210 Iss.8 A8.5 FCC Part 15/C 15.247	At least 20 dB below the highest level of the desired power	Complies
Restricted Frequency Bands	RSS-Gen Issue 4 FCC Part 15/C 15.205	Spurious emissions frequency shall not fall within the restricted bands	Complies
Antenna Requirement	FCC Part 15/C 15.203	Antenna with a unique coupling or professionally installed	Complies
RF Exposure Evaluation	FCC 1.1310	General Population Exposure Levels or lower	Complies

All the tests were conducted on a sample of the equipment as requested by City Theatrical Inc. for the purpose of demonstrating compliance with IC RSS-210 Annex8 and FCC CFR47 PART 15/C 15.247. City Theatrical Inc. is responsible for the tested product configuration, continued product compliance with these standards listed, and for the appropriate auditing of subsequent products, as required. Please note that this list of tests may only comprise a partial list of the tests that are required before a FCC or IC label can be produced by the manufacturer.

This is to certify that the following report is true and correct to the best of our knowledge.

Section I: GENERAL INFORMATION

PRODUCT DESCRIPTION

Applicant: City Theatrical Inc.
Equipment Under Test: Wireless Module 2.4GHz
Model Number: 5792
Serial Number: ENG-001 Client and ENG-002 Server

Introduction:

The CTI 5792 Wireless Module (EUT) is used in multiple City Theatrical products. It is installed by the Manufacturer and is setup by professional operators on-site for the final configuration.

The EUT requires +3.3VDC nominal to operate, which it receives from a regulated power supply in the application board.

EUT Test Configuration:

The EUT was provided preprogrammed with custom firmware for EMC compliance testing. It was programmable by the lab to test the various modulation options and power levels.

The EUT was mounted to Test PCB that is used to provide communications with a PC via USB port; power from an Auxiliary +5Vdc power port and a UFL flexible cable for the antenna port.

The EUT was powered directly by +5Vdc. A ferrite was added to the power cable to isolate the emissions as this cable is not part of the normal system.

The EUT was programmed by a PC running Hyperterminal using the USB port. The PC and USB cable were removed after programming.

The Antenna port was connected directly to a Spectrum Analyzer or Antenna or Terminated as required by the test.

The EUT has 14 modes (A thru L) of modulation for use by client products, 6 test modes (1-6). All modes (A thru L) are Frequency Hopping spread spectrum (FHSS). Modes K and L were also tested as DTS Hybrid as per 15.247(f) due to only having 5 channels.

Mode of Operation	Description	Channels	Frequency Range
A Address: 0	Even channels Full Band FHSS	36	2406MHz to 2476MHz
A Address: 16	Even channels Full Band FHSS	37	2408MHz to 2480MHz
B Address: 0	Odd channels Full Band FHSS	36	2407MHz to 2477MHz
B Address: 16	Odd channels Full Band FHSS	36	2409MHz to 2479MHz
C	Even channels Low Sub Band FHSS	15	2406MHz to 2434MHz
D	Odd channels Low Sub Band FHSS	15	2407MHz to 2435MHz
E	Even channels Mid Sub Band FHSS	15	2428MHz to 2456MHz
F	Odd channels Mid Sub Band FHSS	15	2429MHz to 2457MHz
G	Even channels High Sub Band FHSS	15	2448MHz to 2476MHz
H	Odd channels High Sub Band FHSS	15	2449MHz to 2477MHz
I	Adaptive Odd Channels Full Band FHSS	20	2407MHz to 2477MHz
J	Adaptive Even Channels Full Band FHSS	20	2406MHz to 2476MHz
K	Odd channels High Sub Band FHSS	5	2471MHz to 2479MHz
L	Even channels High Sub Band FHSS	5	2472MHz to 2480MHz
1	Continuous CW test mode	1	2406
2	Continuous Modulated test mode	1	2406
3	Continuous CW test mode	1	2440
4	Continuous Modulated test mode	1	2440
5	Continuous CW test mode	1	2480
6	Continuous Modulated test mode	1	2480

Firmware Rev. Number	1.0

Section II: Test Information

Markings

According to FCC 47 CFR Part 15 Section 15.19 and ICES 003, a statement similar to the following must be included on an identification label, which also uniquely identifies the manufactured date, either explicitly or through a Serial number etc.:

“This equipment complies with FCC Rules, Part 15 and Industry Canada’s ICES 003 for a Class B Digital Device. Operation is subject to two conditions:

- 1) This device may not cause harmful interference, and
- 2) This device must accept any interference that may cause any undesired operation”

Additionally, if the manufacturer markets product to Canada, the following information must be added to the label:

“Cet Appareil numerique de la Classe B respecte toutes les exigences du Reglement sur le material brouilleur du Canada.”

User Manual Statements

According to FCC 47 CFR Part 15 Subpart C Section 15.105, and ICES 003, the following statement must be included in a prominent location in your User’s Manual:

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy, and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

It is also required according to FCC 47 CFR Part 15 Subpart B Section 15.21 that a caution is included such as:

Caution: Changes or modifications to this equipment, not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

This product is License Exempt for FCC and IC. There is a requirement for this product to be submitted for certification and requires both an FCC ID and an IC ID number to be added to the labels in accordance with FCC 47 CFR Part 2 Subpart J (2.901 to 2.956) as well as IC Self-Marking standards.

Additionally, your user manual will require the following statements:

“Cet Appareil numerique de la Classe B respecte toutes les exigences du Reglement sur le material brouilleur du Canada.”

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Part 1 - Radiated Emissions Testing (Receive Mode)

DATE: Nov-11-2014

TEST STANDARD: ICES-003 Issue 5, RSS-Gen Issue 4, FCC Part 15/B

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

TEST SETUP: The EUT was operated in receive mode for these tests.

MINIMUM STANDARD: When the EUT is operating in Receive mode FCC Part 15 Subpart B Unintentional Radiators Limits for a Class B product:

Frequency (MHz)	Field Strength ($\mu\text{V/m}$)	Measurement Distance (m)
0.009 – 0.490	2400/F(kHz)	300
0.490 – 1.705	24000/F(kHz)	30
1.705 – 30.0	30	30
30 – 88	100	3
88 – 216	150	3
216 – 960	200	3
Above 960	500	3

Note: In the above emission table, the tighter limit applies at the band edges.

METHOD OF MEASUREMENT: The equipment was set up in a 3-meter Semi Anechoic Chamber for preliminary measurements and finals were completed in the 3-Meter SAC due to the low emissions. Emissions in both horizontal and vertical polarizations were measured while rotating the EUT on a turntable to maximize the emissions signal strength.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA:

Plot 1: Radiated Emissions, IC/FCC Class B, Receive Mode -3m

Table1: Radiated Emissions, 9KHz-25GHz, IC/FCC Class B, Receive Mode -3m

Frequency (MHz)	QuasiPeak (dBμV/m)	Meas. Time (ms)	Bandwidth (kHz)	Antenna height (cm)	Polarity	Turntable position (deg)	Corr. (dB)	Margin (dB)	Limit (dBμV/m)
300.020700	27.8	1000.000	120.000	100.0	H	160.0	15.5	18.2	46
304.007000	24.2	1000.000	120.000	100.0	H	349.0	15.5	21.8	46
320.006600	24.0	1000.000	120.000	100.0	H	346.0	16.1	22	46
400.026200	27.5	1000.000	120.000	241.0	H	160.0	18.1	18.5	46
500.013600	24.5	1000.000	120.000	186.0	H	347.0	20.1	21.5	46
600.049400	39.1	1000.000	120.000	135.0	H	170.0	21.7	6.9	46
700.029700	22.6	1000.000	120.000	100.0	H	66.0	23.2	23.4	46
700.042000	29.3	1000.000	120.000	100.0	H	178.5	23.2	16.7	46
800.044100	32.3	1000.000	120.000	100.0	H	171.0	24.5	13.7	46

No emissions were detectable from 0.009MHz to 30MHz so no results were measured. All other emissions that were attenuated by more than 20dB from the permissible value are not reported in accordance with 15.31(o).

Part 2 - Intentional Radiated Emissions Testing (Transmit Mode)

DATE: Nov-11-2014

TEST STANDARD: RSS-Gen Issue 4, FCC Part 15 Subpart C -15.209

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: Spurious Emission Limits

Frequency (MHz)	Field Strength ($\mu\text{V/m}$)	Measurement Distance (m)
0.009 – 0.490	2400/F(kHz)	300
0.490 – 1.705	24000/F(kHz)	30
1.705 – 30.0	30	30
30 – 88	100	3
88 – 216	150	3
216 – 960	200	3
Above 960	500	3

Note: In the above emission table, the tighter limit applies at the band edges.

METHOD OF MEASUREMENT: The equipment was set up in a 3-meter Semi Anechoic Chamber for preliminary measurements and final emission measurements. Emissions in both horizontal and vertical polarizations were measured while rotating the EUT on a turntable to maximize the emissions signal strength.

The EUT was tested using the highest power pulsing modulated and Lowest, middle and highest frequency CW signals.

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA:

A conducted emissions prescan was performed 9kHz to 40GHz.

A radiated emissions prescan for spurious emissions was performed using the various antenna's as outlined in Part 11. No additional spurious emissions were detected.

Plot 2: Intentional Radiated Emissions, 30MHz-1GHz, IC/FCC Class B, Tx Mode -3m

Table2: Intentional Radiated Emissions, 9kHz-25GHz, IC/FCC Class B, Tx Mode -3m

Frequency (MHz)	QuasiPeak (dBμV/m)	Meas. Time (ms)	Bandwidth (kHz)	Antenna height (cm)	Polarity	Turntable position (deg)	Corr. (dB)	Margin (dB)	Limit (dBμV/m)
300.012000	27.7	1000.000	120.000	100.0	H	160.0	15.5	18.3	46
400.004600	27.0	1000.000	120.000	236.0	H	160.0	18.1	19	46
600.036500	39.3	1000.000	120.000	134.0	H	172.0	21.7	6.7	46
800.034500	32.7	1000.000	120.000	100.0	H	188.0	24.5	13.3	46
916.967500	23.2	1000.000	120.000	242.0	H	312.0	25.8	22.8	46

No emissions were detectable from 9 kHz to 30 MHz and above 2.5GHz so no results were measured. All other emissions that were attenuated by more than 20dB from the permissible value are not reported in accordance with 15.31(o).

Date: 5.NOV.2014 21:26:55

Conducted emissions 10kHz to 150kHz – prescan for reference use only

Date: 5.NOV.2014 21:28:58

Conducted emissions 150kHz to 30MHz – prescan for reference use only

Date: 5.NOV.2014 21:52:01

Conducted emissions 30MHzHz to 1GHz – prescan for reference use only

Date: 5.NOV.2014 22:00:24

Conducted emissions 1GHzHz to 2.4GHz – prescan for reference use only

Date: 5.NOV.2014 22:10:14

Conducted emissions 2.4835GHz to 3GHz – prescan for reference use only

Part 3 - Restricted Frequency Bands

DATE: Nov-11-2014

TEST STANDARD: RSS-Gen Issue 4, FCC Part 15 Subpart C -15.205

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: Emissions falling into restricted bands shall comply with the limits specified in the applicable RSS-Gen and FCC Part 15/ C

Restricted Bands specified in RSS-Gen

13.36-13.41			

¹ Until February 1, 1999, this restricted band shall be 0.490-0.510 MHz.

² Above 38.6

MEASUREMENT DATA: No detectable radiated emission above 2.480GHz. All approved antennas were investigated. See the Plots and the tables in Part 2

PERFORMANCE: Complies with standard.

Part 4 - Channel Bandwidth

DATE: Nov-04-2014

TEST STANDARD: RSS-210 Iss.8 A8.1, FCC Part 15/C 15.247

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: The bandwidth of a frequency hopping channel is the -20 dB emission bandwidth, measured with the hopping stopped. 20dB Bandwidth measurement required to verify the correct channel spacing for Hopping frequencies.

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA:

Mode	Frequency(GHz)	20dB Channel Bandwidth (MHz)
Mode 2	2.40604465	1.31125
Mode 4	2.44	1.3128125
Mode 6	2.48	1.3053125
Mode A0	2.474004	1.228
Mode A16	2.474004	1.228
Mode J	2.450016	1.236
Mode L	2.474004	1.23

Notes:

- Modes A thru H are the same modulation
- Modes 2, 4, 6 represent the worst case modulation for this transmitter
- Modes I and J are the same modulation
- Modes K and L are the same modulation
- Frequencies and Modes chosen are the worst case representation for this product.

Part 5 - Channel Separation

DATE: Nov-03-2014

TEST STANDARD: RSS-210 Iss.8 A8.1, FCC Part 15/C 15.247

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the -20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the band 2400-2483.5 MHz may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the -20 dB bandwidth of the hopping channel, whichever is greater, provided that the systems operate with an output power no greater than 0.125 W. (21dBm)

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA: Worst case 20dB Occupied Bandwidth = Mode 4 = 1.31MHz

Part 8 - Conducted Output Power

DATE: Nov-05-2014

TEST STANDARD: RSS-210 Iss.8 A8.4, FCC Part 15 Subpart C -15.247

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: For frequency hopping systems operating in the band 2400-2483.5 MHz and employing at least 75 hopping channels, the maximum peak conducted output power shall not exceed 1 W; for all other frequency hopping systems in the band, the maximum peak conducted output power shall not exceed 0.125 W (21dBm).

METHOD OF MEASUREMENT: The Spectrum Analyzer is connected directly to the PCB antenna port; the conducted output power was measured at this point. A 50dB attenuator with 2.2dB cable loss was used to protect the instrumentation. The 52.2dB correction was added as the offset for the instrumentation and is included in the plot.

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA:

Part 9 - EIRP Emissions

DATE: Nov-27-2014

TEST STANDARD: RSS-210 Iss.8 A8.4, FCC Part 15 Subpart C -15.247

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: EIRP shall not exceed 4 W (36dBm) for IC

500mW (27dBm) for FCC (section 15.247(b)(4)) with a maximum 6dBi antenna

15.247(b)(4)(i) Systems operating in the 2400–2483.5 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum peak output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

METHOD OF MEASUREMENT: The Spectrum Analyzer is connected directly to the PCB antenna port; the conducted output power was measured at this point. A 50dB attenuator with 2.2dB cable loss was used to protect the instrumentation. The 52.2dB correction was added as the offset for the instrumentation and is included in the plot

MEASUREMENT DATA:

EIRP for IC using tested antenna's

Mode	Frequency(MHz)	Output Power (dBm)	Maximum Antenna Gain(dBi)	EIRP (dBm)	IC Limit (dBm)	Result
C	2406	13.29	14	27.29	36	Pass
B0	2440	13.35	14	27.35	36	Pass
A16	2480	13.65	14	27.65	36	Pass

EIRP for FCC using tested antenna's

Mode	Frequency(MHz)	Output Power (dBm)	Maximum Antenna Gain(dBi)	EIRP (dBm)	IC Limit (dBm)	Result
C	2406	13.29	14	27.29	36	Pass
B0	2440	13.35	14	27.35	36	Pass
A16	2480	13.65	14	27.65	36	Pass

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

Part 10 - Out of Band Emissions

DATE: Nov-26-2014

TEST STANDARD: RSS-210 A8.5, FCC Part 15/C 15.247

TEST PROCEDURES: ANSI 63.4-2014, ANSI 63.10-2013, FCC Public Notice DA 00-705 March 30,2000, FCC KDB 996369 v01r04, FCC KDB 55807 4v03r02

MINIMUM STANDARD: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the radio frequency power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under Section A8.4(4), the attenuation required shall be 30 dB instead of 20 dB

METHOD OF MEASUREMENT: Measurements were made with the antenna port connected directly into a spectrum analyzer using the appropriate attenuators. Only the modes of operation that had frequencies near the band edges were measured in Hopping Mode. Modes 2 and 6 were used to show the non-hopping band edge emissions.

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

MEASUREMENT DATA:

Mode C 15Channel Low Channel Band Edge Hopping

Date: 5.NOV.2014 20:05:13

Mode L Adaptive High Channel Band Edge Hopping

Date: 5.NOV.2014 20:42:07

Mode 2 Low Channel Band edge Non-Hopping

Date: 8.NOV.2014 00:00:05

Mode 6 High Channel band edge Non-Hopping

Date: 7.NOV.2014 23:36:45

Part 11 - Antenna Requirement

TEST STANDARD: FCC Part 15/C 15.203

APPLICABLE REGULATIONS: An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. This requirement does not apply to carrier current devices or to devices operated under the provisions of Sections 15.211, 15.213, 15.217, 15.219, or 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with Section 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded.

RESULTS: The antennas listed below comply with the standard and maximum EIRP requirements on Part 9.

This product is only sold as an installed part of an OEM final product and is not sold to the general public.

These antennas are only used and installed by trained professional installers and are not available to the general public.

The radio module can be configured with any one of the approved antennas listed below for fixed, point-to-point, one server and one client configuration. When the radio module is configured for point-to-multipoint one server and multiple clients' configuration (client's talk to server only one at a time), the client can use any of the approved antennas and server can use any approved antenna listed below except the 14dBi Yagi directional antenna

Approved and verified antennas for this product

Antenna #	Manufacturer	Model	Type	Connector	Gain (dBi)	Results
1	Nearson	S151AH-2450S	Omni whip	SMA plug reverse polarity	5	Pass
2	Nearson	DG102N-2.4/5.25	Omni whip	SMA plug reverse polarity via provided antenna cable	5	Pass
3	Tekfun	F40-N	Omni whip	SMA plug reverse polarity via provided antenna cable	4.5	Pass
4	Nearson	S152AH-2450S	Omni whip	SMA plug reverse polarity	4	Pass

11	PCTEL Maxrad	MYP24014PT	Yagi	SMA plug reverse polarity via provided antenna cable	14	Pass

Part 12 - RF Exposure Evaluation

TEST STANDARD: FCC 1.1310

APPLICABLE REGULATIONS: RF Exposure must comply with General Population RF Safety requirements. FCC 1.1310 states the criteria listed in the table below shall be used to evaluate the environmental impact of human exposure to radiofrequency (RF) radiation as specified in Section 1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of Section 2.1093. Further information on evaluating compliance with these limits can be found in the FCC's OST/OET Bulletin Number 65, "Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation".

POWER DENSITY LIMITS:

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Average Time (s)
(A) Limits for Occupational/Control Exposures				
300-1500	-	-	F/300	6
1500-100,000	-	-	5	6
(B) Limits for General Population/Uncontrolled Exposures				
300-1500	-	-	F/1500	6
1500-100,000	-	-	1	30

1.1 EUT OPERATING CONDITION

- The antenna used for this product is connected to a Flexible antenna cable that connects to the module PCB using a UFL Connector and is designed for a Peak antenna gain of 14 dBi (peak)
- Highest measured conducted output level = 13.6dBm
- From Table 1, the Maximum Power Density safe exposure level for General Population Uncontrolled Exposure of 30 Seconds for the frequency range of 2.4 to 2.4835GHz is 1mW/cm².
-

Conducted Output Power (dBm)	Max Antenna Gain (dBi)	Max EIRP (dBm)	Max EIRP (mW)	Power Density Limit Allowed (mW/cm ²)	Safe distance (cm)
13.6	14	27.6	576	1	6.8

1.2 RF EXPOSURE EVALUATION DISTANCE CALCULATION

$$d = \sqrt{\frac{EIRP}{4\pi S}}$$

where: d = Distance to the center of radiation of the antenna (cm) for the allowable Power Density

S = Allowable Power density Limit (mW/cm²)

EIRP = Equivalent isotropically radiated power (mW) = 10^[TX Power (dBm) + Ant Gain (dBi)/10]

As shown above, the minimum distance where the MPE limit is reached at 6.8 cm from the EUT with the 14.0dBi antenna.

It is recommended that the unit is positioned so that the typical distance from the antenna to the end user is 20cm or greater.
