FCC Rules: 15.247

Enclosed please find your copy of the Engineering Test Report for which you are subject to the restrictions as listed on the attached summary.

This report may not be reproduced, except in full, without written permission from Compliance Testing, LLC. Please retain a copy of this report for your archival purposes.

Once a Telecommunication Certification Body (TCB) issues a Grant, the Federal Communication Commission (FCC) has 30 days to review the application and request added information. It is your decision whether or not to market the equipment subject to a possible recall before the end of the 30 days.

If your equipment is still retained by us, it will be returned to you 30 days after approval is achieved. Our invoice for services has been directed to your Accounts Payable Department.

For any additional information please contact us.

Sincerely,

Compliance Testing

1.0	December 17, 2010	J. Erhard	Original Document
2.0	January 13, 2011	K. Springer	Revised Model Info per Customer request
3.0	January 21, 2011	J. Erhard	Edit Frequency list on OCC BW tables

The applicant has been cautioned as to the following:

15.21 Information to User

The user's manual or instruction manual for an intentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.27(a) Special Accessories

Equipment marketed to a consumer must be capable of complying with the necessary regulations in the configuration in which the equipment is marketed. Where special accessories, such as shielded cables and/or special connectors are required to enable an unintentional or intentional radiator to comply with the emission limits in this part, the equipment must be marketed with, i.e. shipped and sold with, those special accessories. However, in lieu of shipping or packaging the special accessories with the unintentional or intentional radiator, the responsible party may employ other methods of ensuring that the special accessories are provided to the consumer, without additional charge.

Information detailing any alternative method used to supply the special accessories for a grant of equipment authorization or retained in the verification records, as appropriate. The party responsible for the equipment, as detailed in § 2.909 of this chapter, shall ensure that these special accessories are provided with the equipment. The instruction manual for such devices shall include appropriate instructions on the first page of text concerned with the installation of the device that these special accessories must be used with the device. It is the responsibility of the user to use the needed special accessories supplied with the equipment.

Testimonial and Statement of Certification

This is to certify that:

1. **That** the application was prepared either by, or under the direct supervision of, the undersigned.
2. **That** the technical data supplied with the application was taken under my direction and supervision.
3. **That** the data was obtained on representative units, randomly selected.
4. **That**, to the best of my knowledge and belief, the facts set forth in the application and accompanying technical data is true and correct.

A handwritten signature in black ink, appearing to read "John Erhard".

15.203: Antenna Requirement:

- ☒ The antenna is permanently attached to the EUT
- ☐ The antenna uses a unique coupling
- ☐ The EUT must be professionally installed
- ☐ The antenna requirement does not apply

Test and Measurement Data

All tests and measurement data shown were performed in accordance with FCC Rules and Regulations, Volume II; Part 2 and the following individual Parts: 15.247 Operation within bands 902-928, 2400-2483.5, 5725-5850 MHz

Standard Test Conditions and Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.10-2009 and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104 °F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Measurement results, unless otherwise noted, are worst-case measurements.

Environmental Conditions		
Temperature	Humidity	Pressure
78 degrees Fahrenheit	25%	30.5 inches of mercury

A2LA

“A2LA has accredited Compliance Testing, LLC in Chandler, AZ for technical competence in the field of Electrical testing. The accreditation covers the specific tests and types of tests listed on the agreed scope of accreditation. This laboratory meets the requirements of ISO 17025:2005 ‘General Requirements for the Competence of Testing and Calibration Laboratories’ and any additional program requirements in the identified field of testing.”

Please refer to www.a2la.org for current scope of accreditation.

Name of Test: Number of Hopping Channels
Specification: 15.247(a)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/15/2010

Test Procedure

The EUT was connected directly to a spectrum analyzer and the total number of hopping channels was measured. A marker was placed at 2390 MHz as a reference and two plots were captured allowing the total number of channels to be counted.

Total channel count - 79

Test Setup

Channel Spacing Test Results

Name of Test: Channel Spacing
Specification: 15.247(a)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/15/2010

Test Procedure

The EUT was connected directly to a spectrum analyzer and the channel spacing was measured.

Test Setup

Name of Test: Dwell Time
Specification: 15.247(a)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/14/2010

Test Procedure

The EUT was connected directly to a spectrum analyzer and the dwell time was measured.

Test Setup

Name of Test: Peak Output Power
Specification: 15.247(b)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/10/2010

Test Procedure

The EUT was connected directly to a power meter input.
The peak readings were taken and the result was then compared to the limit.

Test Setup

DTS Transmitter Peak Output Power

Tuned Frequency MHz	Recorded Measurement dBm	Recorded Measurement Watts	Specification Limit	Result
2412	-7.14	0.00019	1 W	Pass
2437	-8.29	0.00015	1 W	Pass
2462	-7.67	0.00017	1 W	Pass

2480	-14.51	0.000035	1 W	Pass

Name of Test: Conducted Spurious Emissions
Specification: 15.247(d)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/14/2010

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT met the requirements for spurious emissions. The frequency range from 30 MHz to the 10th harmonic of the fundamental transmitter was observed. Only detectable spurious emissions were recorded and plotted.

Only the worst case for each frequency and transmission type is recorded in the Conducted Spurious Emissions Summary Test Table.

Test Setup

DTS Conducted Spurious Emissions Summary Test Table

Tuned Frequency MHz	Emission Frequency MHz	Recorded Measurement dBm	Result
2412	488.3	-66.62	Pass
2437	488.3	-66.57	Pass
2462	493.2	-68.23	Pass

FHSS Conducted Spurious Emissions 2480 MHz

Name of Test: Radiated Spurious Emissions
Specification: 15.247(d), 15.209(a), 15.205
Test Equipment Utilized: i00028, i00103, i00379

Engineer: J. Erhard
Test Date: 12/1/2010

Test Procedure

The EUT was tested in a semi-anechoic chamber set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Spurious Emissions. The antenna correction factors, cable loss, and the amplifier gain were input into the spectrum analyzer as correction factors to ensure accurate readings. The spectrum for each tuned frequency was examined to the 10th harmonic.

Name of Test: Occupied Bandwidth
Specification: 15.247(a)(2)
Test Equipment Utilized: i00379

Engineer: J. Erhard
Test Date: 12/1/2010

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Span was set wide enough to capture the entire transmit spectrum and the resolution bandwidth was set to at least 1% of the span. The analyzer was set to max hold and when the entire spectrum was captured the 6dB and 99% bandwidths were measured to verify the bandwidth met the specification.

Test Setup

DTS Occupied Bandwidth Summary

Frequency MHz	Recorded Measurement	Specification Limit	Result
2412	9.0 MHz	≥ 500 KHz	Pass
2437	9.75 MHz	≥ 500 KHz	Pass

PSD 2437 MHz

PSD 2462 MHz

Name of Test: A/C Powerline Conducted Emissions
Specification: 15.207
Test Equipment Utilized: i00270, i00379

Engineer: J. Erhard
Test Date: 12/16/2010

Test Procedure

The EUT power cable connected to a LISN and the monitored output of the LISN was connected directly to a spectrum analyzer. The conducted emissions from 150 kHz to 30 MHz were monitored and compared to the specification limits. The average measurements were the worst-case and are recorded in the tables below.

Test Setup
