

ELECTROMAGNETIC COMPATIBILITY TEST REPORT TO FCC 47 CFR Part 15 SUBPART C SECTION 15.247 & INDUSTRY CANADA RSS-210, RSS-Gen Issue4

Report Number: E10565-1410_Rev1.0
Issue: Release version 1.0
Date of Issue: January 15, 2015
Number of Pages: 51

Testing laboratory: Quality Auditing Institute

Address: 16 – 211 Schoolhouse Street, Coquitlam, BC, V3K 4X9, Canada

Accreditations (ISO 17025):

Standard Council of Canada: Accredited Laboratory No. 743
International Accreditation Service Inc.: Accredited Laboratory: No. TL-239

This report has been completed in accordance with the requirements of ISO/IEC 17025. Test results contained in this report are within QAI Laboratories ISO/IEC 17025 accreditation. QAI Laboratories authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for the use by the company's employees only.

Applicant's name: Energy Aware Technology Inc.
Address: Suite 515 – 88 East Pender Street Vancouver, BC, Canada V6A 3X3

Section I. GENERAL TEST INFORMATION

EMC TEST SUMMARY

The following tests demonstrate testimony for the FCC & IC Marks for Transceivers / electromagnetic compatibility testing for this EUT.

Test / Requirement Description	Applicable FCC Rule Parts	Applicable Industry Canada Rule Parts	Results
Antenna requirement	FCC 47 CFR Part 15.203	Rss-Gen Issue 4	Complies
RF Peak Power Output	FCC Part 15.247 (b)(3)	RSS 210 Issue 8 A8.4(4)	Complies
Occupied Bandwidth 6dB Bandwidth	FCC Part 15.247 (b)(3)	RSS 210 Issue 8 A8.2(a)	Complies
Power Spectral Density	FCC Part 15.247 (e)	RSS 210 Issue 8 A8.2(b)	Complies
Out-of-band Emissions (Band edge)	FCC Part 15.247 (d) RSS 210 Issue 8 A8.2(a)	RSS 210 Issue 8 A8.5	Complies
Conducted Spurious Emissions	FCC Part 15.247 (d)	RSS 210 Issue 8 A8.5	Complies
Radiated Spurious Emissions- Transmit Mode	FCC Part 15.247 (d), FCC Part 15.209 (a), FCC Part 15.205	RSS 210 Issue 8 A2.5,A8.5, Rss-Gen Issue 4	Complies
Radiated Spurious Emissions - Receive Mode	FCC Part 15.247 (d), FCC Part 15.209 (a), FCC Part 15.205	RSS-210, ICES-003 Issue 5	Complies
Duty Cycle Correction	FCC Part 15.35(C)	RSS-GEN ISSUE 4 RSS-210	Complies
AC Mains Conducted Emissions	FCC Part 15.207	RSS-210	Complies
Frequency Stability	FCC Part 15.215(c)	RSS-Gen Issue 4	Complies
RF Exposure Evaluation	FCC 1.1310	N/A	Complies

Tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC 15.247 & Industry Canada RSS-210. The manufacturer is responsible for the tested product configuration, continued product compliance with these standards listed, and for the appropriate auditing of subsequent products as required.

PRODUCT DESCRIPTION

Applicant: Energy Aware Technology Inc.
515-88 East Pender St, Vancouver, BC, Canada V6A 3X3

Equipment Under Test: Neuroio Sensor W1
Trade Name: Neuroio Sensor
Model: W1
Date of Test: Dec 02 – Dec 24 2014

EUT	Neurio Sensor W1
Functional Description	WiFi-enabled residential energy monitor
Operational Description	Utilizes split-core current transformers to monitor the energy consumption of a home. Utilizes a 802.11n-compliant WiFi module to transmit this energy data to a cloud service for further analysis
FRN	0018589234
FCC ID	W72-W1
IC	8253A-W1
Manufacturer	Energy Aware Technology Inc
Model/Type	W1
Transmitter Type	802.11n-compliant
Frequency Range	2412-2462Mhz
Transmit Power	19dBm
Modulation	CCK, DSSS, OFDM
Number of Channels	11
Antenna	Quarter-wave dipole whip antenna
Software and Firmware	0.2.2

ANTENNA DESCRIPTION

Polarization	Vertical
Compact Size	3.25"
RoHS	Yes
Frequency Range	2.4-2.5GHz
Linear Max Gain	2.0dBi
Impedance	50Ω

FACILITIES AND ACCREDITATION

TESTING METHODOLOGY

The tests documented in this report were performed in accordance with ANSI C63.4:2009, ANSI C63.10:2013, FCC CFR 47 Part 2, FCC CFR 47 Part 15, and Rss-Gen Issue 4, Issue 3 and RSS-210, Issue 8. The FCC testing was also done using the FCC KDB 558074 D01 DTS Measurement Guidance v03r02.

EUT TESTING CONFIGURATION

The tests were performed at 3 modulations for the purpose of compliance. The transmitter was set for continuous operation at fundamental frequencies in modulated modes of operation.

WORST TEST CASE

Worst-case orientation was determined by rotating the EUT on three orthogonal planes, during the pre-compliance test and final radiated emissions tests were performed in that worst orientation. The orientation shown in the test setup pictures in Appendix A of this report is the worst test setup scenario.

GENERAL TEST PROCEDURES

RF Conducted Emissions

The EUT is placed on a test bench connected directly to an EMI Receive and Spectrum Analyzer Conducted emissions are measured in the frequency range 9kHz to 25GHz using CISPR Peak, Quasi-Peak and Average detectors. EUT was set up to transmit modulated signal at particular channel at full power.

AC Mains Conducted Emissions

Measurements were made using a test receiver with 9 kHz bandwidth, CISPR Quasi-Peak and Average detector.

Radiated Emissions

The EUT is placed on the turntable 0.8m above a ground plane 3m away from a receiving antenna. Height of receiving antenna varied from 1m to 4m, its polarity changes from vertical to horizontal. Turntable rotates 360 degrees. Motion of turntable and receiving antenna allows determining position of maximum emission level. Quasi-peak detector applies for measurements of emissions with frequency range of 30 to 1000MHz. and average/peak detector otherwise.

MEASUREMENT UNCERTAINTY

Radio Frequency	$\pm 1,5 \times 10^{-5}$
Total RF power, conducted.....	± 1 dB
RF power density, conducted.....	± 2.75 dB
Spurious emissions, conducted.....	± 3 dB
All emissions, radiated.....	± 3.5 dB
Temperature.....	$\pm 1^{\circ}\text{C}$
Humidity.....	± 5 %
DC and low frequency voltages.....	± 3 %

Section II: Requirements as FCC and Industry Canada

Test Summary:

	Test	Standard	Description	Result
Part 1	Antenna requirement	FCC 47 CFR Part 15.203 Rss-Gen Issue 4 (7.1.2)	Soldered, non-replaceable antenna	Complies
Part 2	RF Peak Power Output	FCC Part 15.247 (b)(3) RSS 210 Issue 8 A8.4(4)	Maximum peak conducted output power shall not exceed 1 W. Except as provided in Section RSS 210 A8.4 (5), the e.i.r.p. shall not exceed 4 W.	Complies
Part 3	Occupied Bandwidth 6dB Bandwidth	FCC Part 15.247 (a)(2) RSS 210 Issue 8 A8.2(a)	The minimum -6 dB bandwidth shall be at least 500 kHz.	Complies
Part 4	Power Spectral Density	FCC Part 15.247 (e) RSS 210 Issue 8 A8.2(b)	The transmitter power spectral density conducted from the transmitter to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission	Complies
Part 5	Out-of-band Emissions (Band edge)	FCC Part 15.247 (d) RSS 210 Issue 8 A8.5	In any 100 kHz bandwidth outside the frequency band in which the digitally modulated device is operating, the RF power that is produced shall be at least 20dB.	Complies
Part 6	Conducted Spurious Emissions	FCC Part 15.247 (d) RSS 210 Issue 8 A8.5	In any 100 kHz bandwidth outside the frequency band in which the digitally modulated device is operating, the RF power that is produced shall be at least 20dB.	Complies
Part 7	Radiated Spurious Emissions-Transmit Mode	FCC Part 15.247 (d) FCC Part 15.209 (a) RSS 210 Issue 8 A2.5,A8.5 RSS Gen Issue 3	Radiated emissions requirements as stated in the Standards.	Complies
Part 8	Radiated Spurious Emissions – Receive Mode	FCC Part 15.247 (d) FCC Part 15.209 (a) ICES-003 Issue 5	Radiated emissions requirements as stated in the Standards	Complies
Part 9	Duty Cycle Correction	FCC Part 15.35(C) RSS-GEN ISSUE 4,RSS-210	Measurement and Calculation for duty cycle correction as stated in the standards.	Complies
Part 10	AC Mains Conducted Emissions	FCC 15.207 & RSS-210	Conducted emissions requirements as stated in the Standards	Complies
Part 11	Frequency Stability	FCC Part 15.215(c) & RSS-Gen Issue 8 (8.11)	Measured at temperatures of -20°C (-4°F), +20°C (+68°F) and +50°C (+122°F)	Complies
Part 12	RF Exposure Evaluation	FCC 1.1310	Evaluate the environmental impact of human exposure to radiofrequency (RF) radiation	Complies

Part 1 - Antenna Requirements

DATE: Dec-02- 2014

TEST STANDARD: FCC 47 CFR Part 15.203 and IC Rss-Gen Issue 4 Section 7.1.2

APPLICABLE REGULATIONS: "An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited."... "the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this Part are not exceeded."

RESULT: This unit meets antenna requirement by the use of reverse polarity type SMA connectors.

Part 2 - RF Peak Power Output

DATE: Dec -10 -2014

TEST STANDARD: FCC Part 15.247 (b)(3) RSS 210 Issue 8 A8.4(4)

TEST REQUIREMENT: For systems employing digital modulation techniques operating in the bands 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz, the maximum peak conducted output power shall not exceed 1 W (30dBm). Except as provided in RSS 210 Section A8.4 (5), the e.i.r.p. shall not exceed 4 W.

TEST SETUP: The antenna port of EUT was directly connected to a spectrum analyser.

MEASUREMENT METHOD: As called by the standards above.

DEVICE DESCRIPTIONS: As described in the above EUT description and set up section.

EMISSIONS DATA:

Modulation	Channel	Frequency	UnCorr. PK	Corr. Factor	Corr. PK Power	Limit PK Power
		MHz	dBm	dB	dBm	dBm
802.11b	1	2.412	-11.84	30	18.16	30
	6	2.437	-12.20	30	17.80	30
	11	2.462	-12.86	30	17.14	30

	6	2.437	-14.13	30	15.87	30
	11	2.462	-14.84	30	15.16	30
802.11n	1	2.412	-13.66	30	16.34	30
	6	2.437	-14.14	30	15.86	30
	11	2.462	-14.89	30	15.11	30

RESULTS: Pass: Complies.

Part 3 - Occupied Bandwidth 6dB Bandwidth

DATE: Dec-09-2014

TEST STANDARD: FCC Part 15.247 (a) (2) and RSS 210 Issue 8 A8.2

TEST REQUIREMENT: The minimum -6 dB bandwidth shall be at least 500 kHz.

TEST SETUP: The antenna port of EUT was directly connected to a spectrum analyzer.

MEASUREMENT METHOD: As called by the standards above.

DEVICE DESCRIPTIONS: As described in the above EUT description and set up section.

EMISSIONS DATA:

Modulation	Channel	Frequency (GHz)	6dB Bandwidth (MHz)
802.11b	Low	2.412	8.4
	Mid	2.437	8.1
	High	2.462	9.0
802.11g	Low	2.412	14.6
	Mid	2.437	14.7
	High	2.462	15.1
802.11n	Low	2.412	14.3

Part 4 - Power Spectral Density

DATE: Dec-18-2014

TEST STANDARD: FCC Part 15.247 (e) and RSS 210 Issue 8 A 8.2(b)

TEST REQUIREMENT: The transmitter power spectral density conducted from the transmitter to the antenna shall not be greater than 8dBm in any 3 kHz band during any time interval of continuous transmission. The power spectral density was determined using the same method as is used to determine the conducted output power).

TEST SETUP: The antenna port of EUT was directly connected to a spectrum analyzer.

MEASUREMENT METHOD: As called by the standards above.

DEVICE DESCRIPTIONS: As described in the above EUT description and set up section.

EMISSIONS DATA:

Part 5 - Out of Band Emissions (Band Edge)

DATE: Dec-10-2014

TEST STANDARD: FCC Part 15.247 (d) and RSS 210 Issue 8 A8.5

TEST REQUIREMENTS:

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section A8.4 (4), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in Rss-Gen Issue 4 is not required.

MEASUREMENT METHOD: As called by the standards above.

RESULTS: Pass: Complies

Part 6 - Conducted Spurious Emissions

DATE: March 24 2014

TEST STANDARD: FCC Part 15.247 (d), FCC Part 15.209 (a) and RSS 210 Issue 8 A8.5

TEST REQUIREMENTS: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits.

MEASUREMENT METHOD: Testing was performed as described in the Antenna-port conducted measurements procedure in section 12.2 of 558074 D01 DTS Meas Guidance v03r02

- a) Measure the conducted output power (in dBm) using the detector specified.
- b) Add the maximum transmit antenna gain (in dBi) to the measured output power level to determine the EIRP level.
- c) Add the appropriate maximum ground reflection factor to the EIRP level (6 dB for frequencies ≤ 30 MHz, 4.7 dB for frequencies between 30 MHz and 1000 MHz, inclusive and 0 dB for frequencies > 1000 MHz).
- d) For devices with multiple antenna-ports, measure the power of each individual chain and sum the EIRP of all chains in linear terms (e.g., Watts, mW).
- e) Convert the resultant EIRP level to an equivalent electric field strength using the following relationship: $E = \text{EIRP} - 20\log D + 104.8$
where:
 - E = electric field strength in dB μ V/m,
 - EIRP = equivalent isotropic radiated power in dBm
 - D = specified measurement distance in meters.
- f) Compare the resultant electric field strength level to the applicable limit.
- g) Perform radiated spurious emission test

RESULTS: Pass: Complies.

Part 7 - Radiated Spurious Emissions-Transmit Mode

DATE: Dec-15- 2014

TEST STANDARD: FCC Part 15.247 (d), FCC Part 15.209 (a), FCC Part 15.205, IC RSS-210 Annex 2 Section (A2.2)(b), Rss-Gen Issue 4 Section (7.2.5)

TEST CONDITIONS: Indoor

MINIMUM STANDARD: Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 20 dB below the level of the fundamental or to the general field strength limits listed in Rss-Gen Issue 4, whichever is less stringent.

In measuring unwanted emissions, the spectrum shall be investigated from 30 MHz or the lowest radio frequency signal generated in the equipment, whichever is lower, without going below 9 kHz, up to at least the frequency ... if the equipment operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

Unwanted emissions falling into restricted bands of shall comply with the limits specified below

Frequency (MHz)	Field Strength	
	uV/m @ 3-m	Calculated dBµV/m at 3m
30 – 88	100	40.0
88 - 216	150	43.5
216 - 960	200	46.0
960 - 1000	500	54.0

FCC PART 15.205-RESTRICTED BANDS OF OPERATION

- (a) Except as shown in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

MHz	MHz	MHz	GHz
0.090-0.110	16.42-16.423	399.9-410	4.5-5.15
1 0.495-0.505*	16.69475-	608-614	5.35-5.46
2.1735-2.1905	16.80425-	960-1240	7.25-7.75
4.125-4.128	25.5-25.67	1300-1427	8.025-8.5
4.17725-4.17775	37.5-38.25	1435-1626.5	9.0-9.2
4.20725-4.20775	73-74.6	1645.5-1646.5	9.3-9.5
6.215-6.218	74.8-75.2	1660-1710	10.6-12.7
6.26775-6.26825	108-121.94	1718.8-1722.2	13.25-13.4
6.31175-6.31225	123-138	2200-2300	14.47-14.5
8.291-8.294	149.9-150.05	2310-2390	15.35-16.2
8.362-8.366	156.52475-	2483.5-2500	17.7-21.4
8.37625-8.38675	156.7-156.9	2690-2900	22.01-23.12
8.41425-8.41475	162.0125-	3260-3267	23.6-24.0
12.29-12.293	167.72-173.2	3332-3339	31.2-31.8
12.51975-12.52025	240-285	3345.8-3358	36.43-36.5
12.57675-12.57725	322-335.4	3600-4400	(2)
13.36-13.41			

* - note FCC-specific .

Canada-specific frequency ranges - 3.020-3.026, 5.677-5.683, 121.94-123.0, 149.9-150.05, 162.0125-167.17, 167.72-173.2, 1300-1427, 2483.5-2500, 3500-3600,

(2) Above 38,6 GHz

- (b) Except as provided in paragraphs (d) and (e) of this section, the field strength of emissions appearing within these frequency bands shall not exceed the limits shown in § 15.209. At frequencies equal to or less than 1000 MHz, compliance with the limits in § 15.209 shall be demonstrated using measurement instrumentation employing a CISPR quasi-peak detector. Above 1000 MHz, compliance with the emission limits in § 15.209 shall be demonstrated based on the average value of the measured emissions. The provisions in § 15.35 apply to these measurements.

RESTRICTED FREQUENCY BANDS (RSS-GEN ISSUE 4)

MHz	MHz	GHz
0.090-0.110	240-285	9.0-9.2

156.7-156.9		

Note: Certain frequency bands listed in Table 3 and in bands above 38.6 GHz are designated for licence-exempt applications. These frequency bands and the requirements that apply to the devices are set out in the 200- and 300- series RSSs, such as RSS-210 and RSS-310, which contain the requirements that apply to licence-exempt radio apparatus.

TEST SETUP:

The EUT was tested in our 3 m SAC and was positioned on the center of the turntable and connected to a 3Vdc battery. The transmitter was set for continuous transmission. The lowest, middle and highest channels in the 2400-2483.5 MHz band were measured for all radiated emissions 10kHz to 18 GHz. The EUT was pre-scanned in 3 different orthogonal orientations and was found to radiate highest when placed flat on the table top as indicated in the test photos.

MEASUREMENT METHOD:

Measurements were made using spectrum analyser and receiver, 200Hz RBW average detector for the frequency range 9-150KHz; 9kHz RBW average detector for the Frequency range 150kHz to 30MHz; 120kHz RBW quasi-peak detector using the appropriate antennas, amplifiers and filters.

As per FCC guidance document 558074 D01 DTS, conducted measurements were performed with proper impedance matching and an additional radiated test for cabinet/case spurious emissions performed. The general procedure used was as follows:

- a) Measure the conducted output power (in dBm) using the detector specified (see 12.2.2, 12.2.3, and 12.2.4 for guidance regarding measurement procedures for determining quasi-peak, peak, and average conducted output power, respectively).
- b) Add the maximum transmit antenna gain (in dBi) to the measured output power level to determine the EIRP level (see 12.2.5 for guidance on determining the applicable antenna gain)
- c) Add the appropriate maximum ground reflection factor to the EIRP level (6 dB for frequencies ≤ 30 MHz, 4.7 dB for frequencies between 30 MHz and 1000 MHz, inclusive and 0 dB for frequencies > 1000 MHz).
- d) For devices with multiple antenna-ports, measure the power of each individual chain and sum the EIRP of all chains in linear terms (e.g., Watts, mW).
- e) Convert the resultant EIRP level to an equivalent electric field strength using the following relationship:

$$E = \text{EIRP} - 20 \log D + 104.8$$
 where:
 E = electric field strength in dB μ V/m,
 EIRP = equivalent isotropic radiated power in dBm
 D = specified measurement distance in meters.
- f) Compare the resultant electric field strength level to the applicable limit.
- g) Perform radiated spurious emission test

Additional consideration was given to unwanted emissions radiating from the EUT cabinet, control circuits, power leads, or intermediate circuit elements by performing a radiated test to ensure that emissions emanating from the EUT cabinet (rather than the antenna port) also comply with the applicable limits. For these cabinet radiated spurious emission measurements the EUT transmit antenna was replaced with a 50 Ohm termination matching the nominal impedance of the antenna.

The measurement results are obtained as described below:

$$E [\text{dB}\mu\text{V/m}] = \text{Un-Corrected Value} + \text{ATOT}$$

Where ATOT is total correction factor including cable loss, antenna factor and preamplifier gain (ATOT = LCABLES + AF - AMP).

DEVICE DESCRIPTIONS: As described in the above EUT description and setup section.

EMISSIONS DATA:

Note:

1. Pre-test has been performed on the different modulation of the EUT to find out the worst case which is **Modulation 802.11b**.
2. Radiated Emissions test was performed from 9 kHz-25GHz, except the emissions reported below, all other signals were more than 20dB lower than the limit.
3. Emissions over the limit line in the above plot were the fundamental transmitting frequency.

Radiated Emissions 150k-30MHz

*Emissions were measured below 30MHz but no emissions were found that were 20dB below the permissible limits.

Part 8 - Radiated Spurious Emissions - Unintentional

DATE: Nov- 20-2014

TEST STANDARD: FCC Part 15.247 (d), FCC Part 15.209 (a) and ICES-003 Issue 5

TEST CONDITIONS: Indoor

MINIMUM STANDARD: Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 20 dB below the level of the fundamental or to the general field strength limits listed in Rss-Gen Issue 4, whichever is less stringent.

In measuring unwanted emissions, the spectrum shall be investigated from 30 MHz or the lowest radio frequency signal generated in the equipment, whichever is lower, without going below 9 kHz, up to at least the frequency ... if the equipment operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

Unwanted emissions falling into restricted bands of shall comply with the limits specified below

Frequency (MHz)	Field Strength	
	uV/m @ 3-m	Calculated dBµV/m at 3m
30 – 88	100	40.0
88 - 216	150	43.5
216 - 960	200	46.0
960 - 1000	500	54.0

TEST SETUP: The EUT was tested in our 3 m SAC and was positioned on the center of the turntable and connected to a 3Vdc battery. The transmitter was set for continuous transmission. The lowest, middle and highest channels in the 2400-2483.5 MHz band were measured for all radiated emissions 10kHz to 18 GHz. The EUT was pre-scanned in 3 different orthogonal orientations and was found to radiate highest when placed flat on the table top as indicated in the test photos.

MEASUREMENT METHOD: Measurements were made using spectrum analyser and receiver, 200Hz RBW average detector for the frequency range 9-150KHz; 9kHz RBW average detector for the Frequency range 150kHz to 30MHz; 120kHz RBW quasi-peak detector using the appropriate antennas, amplifiers and filters.

The measurement results are obtained as described below:

E [dBµV/m] = Un-Corrected Value + ATOT

Where ATOT is total correction factor including cable loss, antenna factor and preamplifier gain (ATOT = LCABLES + AF - AMP).

DEVICE DESCRIPTIONS: As described in the above EUT description and setup section.

RESULTS: Pass: Complies.

DATA & PLOT:

Radiated Spurious Emissions Plot: Unintentional, 30MHz – 1GHz

Radiated Spurious Emissions Data: Unintentional, 30MHz – 1GHz

Frequency (MHz)	QuasiPeak (dBμV/m)	Meas. Time (ms)	Bandwidth (kHz)	Antenna height (cm)	Polarity	Turntable position (deg)	Corr. (dB)	Margin (dB)	Limit (dBμV/m)
42.961800	25.3	1000.000	120.000	133.0	V	213.0	12.1	15.2	40.5
47.254800	16.2	1000.000	120.000	132.0	V	69.0	9.8	24.3	40.5
77.825000	29.5	1000.000	120.000	400.0	H	300.0	9.1	11.0	40.5

Note: All other emissions from 9KHz – 25GHz were more than 20dB lower than the limit line.

Part 9 - Duty Cycle Correction Factor For Radiated Emissions

DATE: Dec-24 -2014

TEST STANDARD: FCC Part 15.35 (d), FCC Part 15.209 (a) and ICES-003 Issue 5

TEST CONDITIONS: Indoor

MEASUREMENT METHOD: The FCC regulations provide an allowance for correcting pulsed transmissions when the limits are expressed in terms of an average, and the average measurement may be derived from the peak pulse amplitude corrected for the duty cycle.

As detailed in 47 CFR Part 15.35(c), the correction factor of a transmission is a 100 ms capture of a characteristic pulse train of "on time". In the event that the pulse train is greater than 100 ms, the 100 ms pulse train captured must include a representation of worst-case "on time" pulses.

RESULTS:

Pulse Duration	1.18ms
Number of pulses	4
Total Transmission Duration	4x1.18ms = 4.72 ms
On Time within 100 msec	4.72msec
Duty cycle Correction factor	$20\log(4.72/100) = -26.5\text{dB}$

DATA & PLOT:

Part 10 - AC Mains Conducted Emissions

DATE: Dec-04-2014

TEST STANDARD: FCC 15.207 & RSS-210

TEST VOLTAGE: 120Vac, 60Hz

MINIMUM STANDARD: Class B Limit:

Frequency (MHz)	Conducted Limit (dB μ V)	
	Quasi-Peak	Average
0.15 - 0.50	66 to 56	56 to 46
0.5 - 5	56	46
5 - 30	60	50
Note 1 The lower limit shall apply at the transition frequencies		
Note 2 The limit decreases linearly with the logarithm of the frequency in the 0.15 to 0.50 MHz..		

TEST SETUP: The EUT was connected to the conducted emissions LISN apparatus.

METHOD OF MEASUREMENT: Measurements were made using a test receiver with 9 kHz bandwidth, CISPR Quasi-Peak and Average detector.

DEVICE DESCRIPTIONS: As described in the Equipment under Test Section, above.

CABLING DETAILS: Refer to Equipment Under Test Section for Cabling.

MODIFICATIONS: No modification is required to comply for this test.

PERFORMANCE: Complies with standard.

Part 11 - Frequency Stability

DATE: Dec-10-2014

TEST STANDARD: FCC Part 15.215(c) and Rss-Gen Issue 4 Issue 8 (8.11)

MINIMUM STANDARD: Not specified.
Rss-Gen Issue 4 (8.8): Transmitter frequency stability for licence-exempt radio apparatus shall be measured in accordance with Section 6.11. For licence-exempt radio apparatus, the frequency stability shall be measured at temperatures of -20°C (-4°F), +20°C (+68°F) and +50°C (+122°F) instead of at the temperatures specified in Section 6.11. If the frequency stability of the licence-exempt radio apparatus is not specified in the applicable standard (RSS), measurement of the frequency stability is not required provided that the occupied bandwidth of the licence-exempt radio apparatus lies entirely outside the restricted bands and the prohibited TV bands of 54-72 MHz, 76-88 MHz, 174-216 MHz, 470-608 MHz and 614-806 MHz.
FCC (15.215(c)): The 20dB bandwidth must remain within the designated frequency band over the expected variations in temperature and voltage range

TEST SETUP: The EUT was bench tested and in our temperature chamber. Due to the outdoor location and mounting method of the EUT, the EUT voltage and temperature range was specified by the manufacturer and verified at 2.6, 3 and 5Vdc; +50 to -30° Celsius. The transmitter was set for Carrier Wave (CW) mode and the lowest and highest channel Frequency was measured at each Temperature setting, after the Transmitter stabilized at the temperature.

MEASUREMENT METHOD: Measurements were made using a Spectrum Analyzer with 120kHz RBW Average detector while directly connected to the EUT through the antenna port.

DEVICE DESCRIPTIONS: As described in the above EUT description and setup section

Measurement Data:

Temp	Chnnl	Pk Pwr Freq.	Peak Pwr	Meas. Time	Bandwidth	Corr.	EIRP**	ERP**	Results

Part 12 - RF Exposure Evaluation

FCC 1.1310 states the criteria listed in the table below shall be used to evaluate the environmental impact of human exposure to radiofrequency (RF) radiation as specified in Section 1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of Section 2.1093. Further information on evaluating compliance with these limits can be found in the FCC's OST/OET Bulletin Number 65, "Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation".

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Average Time (s)
(A) Limits for Occupational/Control Exposures				
300-1500	-	-	F/300	6
1500-100,000	-	-	5	6
(B) Limits for General Population/Uncontrolled Exposures				
300-1500	-	-	F/1500	6
1500-100,000	-	-	1	30

1.1 EUT OPERATING CONDITION

- The antenna used for this product is a Chip antenna and is designed for a Peak antenna gain of 2 dBi (peak)
- Highest measured conducted output level = **18.16 dBm**
- From Table 1, the Maximum Power Density safe exposure level for General Population Uncontrolled
- Exposure of 30 Seconds for the frequency range of 2.4 to 2.4835GHz is 1mW/cm²

Conducted Output Power (dBm)	Max Antenna Gain (dBi)	Max EIRP (mW)	Power Density Limit Allowed (mW/cm ²)	Safe distance (cm)
18.16	2	103.75	1	2.87

1.2 RF EXPOSURE EVALUATION DISTANCE CALCULATION

$$d = \sqrt{\left(\frac{EIRP}{4\pi S}\right)}$$

where:

d = Distance to the center of radiation of the antenna (cm) for the allowable Power Density

S = Allowable Power density Limit (mW/cm²)

EIRP = Equivalent isotropically radiated power (mW) = 10 [TX Power (dBm) + Ant Gain (dBi)]/10

As shown above, the minimum distance where the MPE limit is reached is **2.87 cm** from the EUT with the **2dBi** antenna.

It is recommended that the unit is positioned so that the typical distance from the antenna to the end user is 20cm or greater.

Appendix A: EUT photos during the testing
