User Guide

0. Preface

0.1. Safety Instructions

- 1) Grounding: The access unit and extension unit of the device are equipped with protective grounding terminals. During installation, yellow-green grounding wires should be used to ensure a reliable connection to the building's protective earth. Grounding braided straps may also be used. The antenna and feeder cables must be properly grounded.
- 2) Power Supply: The device supports DC 48V power supply or AC 220V (198–240V) power supply. Please ensure that the DC power source is within the device's required range of DC 36–60V. The grounding terminal of the device must be reliably connected to the building's protective earth.
- 3) Electric Shock Protection: Touching the internal power module of the device is dangerous. Live operation is strictly prohibited to prevent electric shock.
- 4) Optical Module: The optical module supports hot-swapping, but the fiber optic connector must not be pointed at any part of the human body during insertion or removal.
- 5) Surge Protection:
The built-in surge protector of this product is mainly designed to protect against induced lightning and switching overvoltage. It cannot protect against direct lightning strikes.
 - In areas with frequent lightning activity, it is recommended to install a primary surge protector (10/350 μ s waveform) at the building's main distribution panel, and a secondary surge protector (8/20 μ s waveform) at the distribution cabinet or in front of the device to form a layered protection system.
 - The surge protection components are single-use devices and may fail after exposure to high-energy lightning strikes. Regular inspection is recommended, especially after lightning events.
 - If the device is installed in open or elevated locations (such as rooftops), additional external lightning protection measures (e.g., lightning rods) must be implemented.

0.2. Warning Marks

The warning labels on the system enclosure and within the system must be kept clean, legible, and clearly identifiable.

0.3. Electrostatic Protection

1. Avoid allowing clothing or hands to come into contact with PCBs, electronic components, and conductive surfaces of parts whenever possible. If handling of PCBs, components, or conductive parts is necessary, proper anti-static precautions must be taken, such as wearing anti-static gloves or using anti-static bags. Electrostatic discharge (ESD) may damage the equipment.

1.1. Standard

Protection rating complies with IP67.

RF performance complies with 3GPP standards.

System Overview

Band	type
3700-3800	nCELL-RU4460-R428N17878B-M

BBU Software Version	5GNR_ax.tdd.fr1.2.2.3.462_r50381_m361_V3.3
RRU Software Version	iDAS_DRRU_R528_D0.3.B13S_B7C7_20230410

1.2. Technical Specifications

No.	ITEM	
	Work frenquce	3700-3800 MHz
1	Pout Range	45.5-47dBm
2	Pout	-1dB/+0.5dB
3	ACPR(1 carrier)	≤ -45 dBc
4	SE	9 kHz~150 kHz@1 kHz ≤ -36 dBm 150 kHz~30 MHz@10 kHz ≤ -36 dBm 30 MHz ~ 1 GHz@100 kHz ≤ -36 dBm 1G-(F_low-40MHz)@1 MHz ≤ -30 dBm (F_high+40MHz)-12.75GHz@1 MHz ≤ -30 dBm 12.75 GHz - 26 GHz@1 MHz ≤ -30 dBm
5	SEM	0.05MHz $\leq f_{offset} \leq 5.05$ MHz@ $\leq -16 \sim -23$ dBm/100kHz 5.05MHz $\leq f_{offset} \leq 10.05$ MHz@ ≤ -23 dBm/100kHz 10.05MHz $\leq f_{offset} \leq f_{offsetmax}$ @ ≤ -25 dBm/100kHz
6	SWR	≤ 1.8
7	Sensity	≤ -95.6 dBm

1.3. System Framework

The network configuration is provided for reference purposes only.

2. Installation and Connections

2.1. Installation Method

➤ Back on the Wall

The installation accessories designed during the equipment installation are shown in the following figure, and are combined according to the installation scenario.

sCELL-RU4460 Accessories List		① Nut M10	② Screw M6×14	③ Flat Washer M10	④ Spring Washer M10
					
⑤ Handle	⑥ Expansion Bolt M10×90	⑦ Optical Transceiver Optical Transceiver			
					
⑧ HPRU Mounting Bracket I	⑨ HPRU Mounting Bracket II	⑩ Nut M12			
					
⑪ Flat Washer M12	⑫ Spring Washer M12	⑬ Bolt M12			
					
⑭ DC Power Lead 2m	⑮ Ground Wire 2m				
					

Step 1: Using a T5 wrench, secure the handle to the side of the device with M6*14 screws

Step 2: Using a T5 wrench, secure the Type I bracket to the back of the device with M6*14 screws

Step 3: Mark the location of the drill hole on the mounting bracket II. Note: R=13mm

Step 4: drill 4 holes in the marked position. Note: H=70mm

Step 5: Attach pins, expansion bolts or something similar to the wall and bracket II to the wall

Tip: Use bracket II as a reference to control the separation distance of each device before hanging and locking the device.

Step 6: Hang the device on the mounting bracket II and secure with the M10 nut

Step 7: Fixed the mounting bracket I and the mounting bracket II with the M6*14 screws

Step 8: Connect and tighten the ground cable on the left side of the equipment

Step 9: Connect and tighten the ground wire to the left side of the RU4460

Step 10: Open the chassis on the right side of the RU4460 and connect to the SFP optical module

➤ **Side on the Wall**

Step 1: Using a T5 wrench, secure the handle to the side of the device with M6*14 screws

Step 2: Using a T5 wrench, secure the type I bracket to the left side of the device with M6*14 screws

Step 3: Mark the location of the drill hole on the mounting bracket II. Note: R=13mm

Step 4: drill 4 holes in the marked position. Note: H=70mm

Step 5: Attach the pins, expansion bolts or something similar to the wall and the bracket II to the wall.

Tip: Use bracket II as a reference to control the separation distance of each device before hanging and locking the device.

Step 6: Hang the device on the mounting bracket II and secure with the M10 nut

Step 7: Fixed the mounting bracket I and the mounting bracket II with the M6*14 screws

Step 8: Open the chassis on the right side of the RU4460 and connect to the SFP optical module

➤ Pole Installation

Step 1: Install the handle and bracket I to the back of the device.

Step 2: Install the bracket II and Bracket III to the pole.

Step 3: Hang the equipment on the mounting bracket and secure with the M10 nut

Step 4: Install the power cord and ground wires.

Additional accessories are required to install the poles, and are purchased separately.

Note: The diameter of Pole shall not be over 110mm or less than 55mm.

2.2. Device Interfaces

Diagram of the RRU

NO.	Silk mark	interface specification
1	CH1	RF output port 1
2	CH2	RF output port 2
3	CH3	RF output port

4	CH4	RF output port 4
5	Alarm	External alarm port
6	PWR	Power interface
7	RET	Active power supply port
8	GND	ground connectio
9	WAN	internet access
10	OPS	Access from the optical port-optical module
11	OPM	Main light mouth
12	OPS/OPM/STATUS	LED pilot lamp

Note:

1.1.1.1 RRU is equipped with a pair of HG Tech / Finisar optical modules, and optical modules must be used as a pair as the following table suggests.

Brand	One End of Fiber	Another End of Fiber	Remark
HG Tech	MBS-1C41-27 (blue)	MBS-1C41-33 (purple)	
Finisar (optional)	FTLX2072D327 (grey)	FTLX2072D333 (green)	

3. RU4460 Access

3.1. Access via Debug Port

- a) Move file “iptables.sh” to BBU root directory.

Select SSH2, Port22, Account: root Password: root123

Name	Size	Changed	Rights	Owner
5g.identity	1 KB	12/31/2021 9:30:06 AM	rw-r--r--	root

- b) Script execution permission

```
# chmod 777 iptables.sh
```

- c) Run the scripts

```
# ./iptables.sh
```

- d) Run “route_config_5g_bbu” Script as administrator.

```
# route add 192.168.200.0 mask 255.255.255.0 192.168.5.100 -p
```

Note: in the script, the IP 192.168.5.100 should be modified.

For example, if the maintenance IP of BBU is 192.168.17.131, then need to change the script to:

```
#route add 192.168.200.0 mask 255.255.255.0 192.168.17.131 -p
```

- e) Check if the script is successful

```
# route print
```

```

    Network Address          Netmask          Gateway Address    Metric
    192.168.200.0            255.255.255.0    192.168.5.100      1
```

Step 2: BBU Side Configuration

Path: Home/Config/Service/RuManagement

Example: The RRU is connected to the BBU optical port 1, the Carrier0EaxcId should be set to 0.

Step 3: RRU Side Configuration

Path: Maintenance/Engineering/Connect/Option Port Selection

a) Select optical port

If the RRU is connected to the optical port 1 of accelerator card, optical port selection on RRU GUI should be configured to 1.

Accelerator Card Port	Optical port selection
1	1
2	2
3	3
4	4

b) Set Carrier 0 EAXC-ID and Carrier 0 bandsector-bitmask.

Carrier 0 EAXC-ID is 0 by default. The parameter should be configured based on the accelerator card port that the RRU is connected to. Following is the mapping table. Path: Settings/Carrier Info/Carrier 0 configuration

Accelerator Card Port	Carrier 0 EAXC-ID
1	0
2	1
3	2
4	3

Carrier 0 bandsector-bitmask should be changed to 15.

Step 4: visit RU4460 via BBU.

After finishing the above steps, it is reliable to visit RRU via BBU.

Accelerator Card Ports and RRU IPs' mapping relationship is shown as follow.

Port	IPs
1	192.168.200.10
2	192.168.200.20
3	192.168.200.30
4	192.168.200.40

Note:

- a. The RRU script iptables.sh should be re-executed if accessing RRU from BBU fails after the RRU upgrade.
- b. Repeat **chapter 3.3.2 Step1 preparation** once the BBU gets a power cycle.

3.3. Local Upgrade

Step1 Click upgrade to enter the upgrade interface, click Upload to upload the RRU upgrade package from local to the RRU system.

Step2 Select the target upgrade package and click forced upgrade. (Password: iDas)

Step3 pop-up prompt and click OK

Step4 After upgrading succeed, RRU will automatically restart and after restart will enter this interface.

Step5 Check the Software version

4. Device Maintenance

Common Parameter Check

Parameter Name	Normal Range
Downlink Carrier Baseband Power	-12 dBm (fixed 4-stream full traffic) /-18 dBm (adaptive full traffic) /-24 dBm (no terminal access)
Channel X Baseband Power	Consistent with the downlink carrier baseband power.
Output Power	45.5dBm-47dBm
VSWR	<1.8
PTP Status	Green

5. Equipment handling and recycling

The above symbols indicate that your products must be separated from household waste in accordance with local laws and regulations. When you need to remove equipment under certain circumstances, such as upgrading, replacing or scrapping equipment, we conduct separate recycling programs or work with government-approved agencies to collect, treat, recycle and dispose of discarded electrical and electronic equipment, batteries and packaging. We encourage all

customers and end users to make responsible decisions when handling products. When handling your products and/or their batteries, separate collection and recycling will help conserve natural resources, and you are helping to ensure that they are neither incinerated nor sent to landfills, thereby minimizing potential negative impacts on human health and the environment.

Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation. This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 590cm between the radiator & your body.
