4.1.1 Test location and equipment (for reference numbers please see chapter 'List of test equipment')

Test location	See Chapter 2.1
Equipment	For Evaluation instruments are not needed. Results are determined by calculation based on applicants delivered Tune-Up procedure.

4.1.2 Requirements

FCC: §1.1310	The criteria used for the evaluation of human exposure to radio frequency radiation is table 1 according FCC §1.1310 and it is subject for evaluation of the RF exposure prior to equipment authorization.
FCC § 2.1093	Further information on evaluating compliance with these limits can be found in the FCC's OST/OET Bulletin Number 65, "Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation." For purposes of these requirements portable device is defined by the FCC as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that the RF source's radiating structure(s) is/are within 20 centimeters of the body of the user.

4.1.2.1 Valid for FCC

NOTE1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure. These limits apply to amateur station licensees and members of their immediate household as discussed in the text.

NOTE2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. As discussed in the text, these limits apply to neighbors living near amateur radio stations.

4.2 MPE Calculation method

Predication of MPE limit at a given distance

Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{EIRP}{4\pi R^2} = \frac{P * G}{4\pi R^2}$$

$$G_{NUMERIC} = \frac{S * 4\pi R^2}{P}$$

Where: S= power density

P= power input to antenna

G= power gain of the antenna in the direction of interest relative to an isotropic radiator

R= distance to the center of radiation of the antenna

4.3 Evaluation Method

Please find in the following tables **the calculations based on applicants information** and measured source-based available maximum time-averaged (matched conducted) output power.

4.4 Results for mobile and portable operations

4.4.1 FCC SAR exemption based on low power for 2.4 GHZ WPAN

According KDB 447498 D01 General RF Exposure Guidance DR04-44307 appendix B.4 the following table is given for separation distances from 0.5cm to 40cm and at frequencies from 0.3GHz to 6GHz:

Table B.2—Example Power Thresholds (mW)

Frequency (MHz)	Distance (mm)										
		5	10	15	20	25	30	35	40	45	50
	300	39	65	88	110	129	148	166	184	201	217
	450	22	44	67	89	112	135	158	180	203	226
	835	9	25	44	66	90	116	145	175	207	240
	1900	3	12	26	44	66	92	122	157	195	236
	2450	3	10	22	38	59	83	111	143	179	219
	3600	2	8	18	32	49	71	96	125	158	195
	5800	1	6	14	25	40	58	80	106	136	169

With a separation distance of 5mm for 2450 MHz $P_{\text{threshold}}(\text{mW})$ should $< 3\text{mW}$ to fulfil the SAR exemption rules.

According tune-up information $3\text{ dBm} + 0.5\text{ dBi} = 3.5\text{ dBm} = 2.2\text{ mW} < 3\text{ mW}$

Conclusion: SAR Exemption fulfilled.

4.4.2 FCC SAR exemption based on low power for UWB

According KDB 447498 D01 General RF Exposure Guidance DR04-44307 chapter 2.12 the following is given:

2.1.2 1-mW Test Exemption

Per §1.1307(b)(3)(i)(A), a single RF source is *exempt RF device* (from the requirement to show data demonstrating compliance to RF exposure limits, as previously mentioned) if the available maximum time-averaged power is no more than 1 mW, regardless of separation distance.

This exemption applies to all operating configurations and exposure conditions, for the frequency range 100 kHz to 100 GHz, regardless of fixed, mobile, or portable device exposure conditions. This is a standalone exemption, and it cannot be applied in conjunction with any other test exemption.

Measured source-based available maximum time-averaged (matched conducted) output power = $-11.90\text{ dBm} = 0.065\text{ mW}$

Calculated EIRP = output power + antenna gain = $-11.90 + 2.5\text{ dBi} = -9.40\text{ dBm} = 0.115\text{ mW}$

Conclusion: 1 mW test exemption fulfilled.

4.4.3 Co-location assessment (scenario)

No assesment. No co-location possible between 2.4 GHz WPAN and UWB.
