

**FCC/IC - TEST REPORT**

Report Number : **68.910.19.0058.01** Date of Issue: September 19, 2019

Model : **BLELED**

Product Type : Module for Lighting kit

Applicant : Winplus Co., Ltd.

Address : Suites 6-11, 7th Floor, Corporation Park, 11 On Lai Street, Shatin,  
Hong Kong

Manufacture : Winplus Co., Ltd.

Address : Suites 6-11, 7th Floor, Corporation Park, 11 On Lai Street, Shatin,  
Hong Kong

Test Result : **n Positive      o Negative**

Total pages including Appendices : 27

*TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch is a subcontractor to TÜV SÜD Product Service GmbH according to the principles outlined in ISO 17025.*

*TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch issued reports.*

## 2 Details about the Test Laboratory

### Details about the Test Laboratory

#### Test Site 1

Company name: TÜV SÜD Certification and Testing (China) Co., Ltd. Shenzhen Branch  
Building 12&13, Zhiheng Wisdomland Business Park,  
Nantou Checkpoint Road 2, Nanshan District,  
Shenzhen City, 518052,  
P. R. China

FCC Registration Number: 514049

FCC Designation Number: CN5009

ISED#: 10320A

CAB identifier: CN0077

Telephone: 86 755 8828 6998  
Fax: 86 755 8828 5299

### 3 Description of the Equipment Under Test

#### Description of the Equipment Under Test

Product/PMN: Module for Lighting kit

Model no./HVIN: BLELED

HMN: Exterior Trim LED

FCC ID: WUI-BLELED

IC: 7297A-BLELED

Options and accessories: NIL

Ratings: 1.8-3.6VDC

RF Transmission Frequency: 2402MHz-2480MHz

No. of Operated Channel: 40

Modulation: GFSK

Antenna Type: Integrated Antenna

Antenna Gain: 1.5dBi

Description of the EUT: The Equipment Under Test (EUT) is a Module for Lighting kit supports 2.4GHz Bluetooth functions.

#### Auxiliary Equipment Used during Test:

| DESCRIPTION       | MANUFACTURER | RATINGS            | MODEL NO. |
|-------------------|--------------|--------------------|-----------|
| Exterior Trim LED | WINPLUS      | Input: 12VDC, 0.1A | LM57485   |

## 4 Summary of Test Standards

| Test Standards                                 |                                                                                         |
|------------------------------------------------|-----------------------------------------------------------------------------------------|
| FCC Part 15 Subpart C<br>10-1-2018 Edition     | PART 15 - RADIO FREQUENCY DEVICES<br>Subpart C - Intentional Radiators                  |
| RSS-Gen<br>Issue 5, Amendment 1,<br>March 2019 | General Requirements and Information for the Certification of<br>Radio Apparatus        |
| RSS-210 Issue 9<br>August 2016                 | RSS-210 — Licence-exempt Radio Apparatus (All Frequency<br>Bands): Category I Equipment |

All the test methods were according to ANSI C63.10-2013.

## 5 Summary of Test Results

| Technical Requirements                                                                                                                      |            |           |                                     |                          |                                     |

| §15.203, RSS-GEN 6.8<br>Antenna requirement                                                                                                 | See note 2 |           | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>            |

Remark 1: N/A- Not Applicable;

Note 1: The EUT is not intended to operate from the AC power lines;

Note 2: The EUT used an integral PCB antenna, which gain is 1.5dBi. According to §15.203, it is considered sufficiently to comply with the provisions of this section.

Note 3: The radio module do not has shielded cover, so it was tested with a host for this modular approve application, the host information as below :

Company name: Winplus Co., Ltd.

Product/PMN: Exterior Trim LED

Model no./HVIN: LM57485

## 6 General Remarks

### Remarks

This submittal(s) (test report) is intended for FCC ID: WUI-BLELED and IC: 7297A-BLELED complies with Section 15.207, 15.205, 15.209, 15.249 of the FCC Part 15, Subpart C Rules; RSS-Gen Issue 5 and RSS-210 issue 9.

### SUMMARY:

All tests according to the regulations cited on page 5 were

n - Performed

o - **Not** Performed

The Equipment Under Test

n - **Fulfills** the general approval requirements.

o - **Does not** fulfill the general approval requirements.

Sample Received Date: September 03, 2019

Testing Start Date: September 03, 2019

Testing End Date: September 04, 2019

## 7 Test setups

### 7.1 Radiated test setups

Below 1GHz

Above 1GHz

## 8 Technical Requirement

### 8.1 Field strength of emissions and Restricted bands

#### Test Method

- 1: The EUT was place on a turn table which is 1.5m above ground plane for above 1GHz and 0.8m above ground for below 1GHz at 3-meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2: The EUT was set 3 meters away from the interference – receiving antenna, which was mounted on the top of a variable – height antenna tower.
- 3: The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 4: For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 5: Use the following spectrum analyzer settings According to C63.10:

#### For Above 1GHz

Span = wide enough to capture the peak level of the in-band emission and all spurious  
RBW = 1MHz, VBW $\geq$ RBW for peak measurement and VBW = 10Hz for average measurement, Sweep = auto, Detector function = peak, Trace = max hold.

#### For Below 1GHz

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious  
RBW = 100 KHz, VBW $\geq$ RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

#### Note:

- 1: The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 KHz for Quasi-peak detection (QP) at frequency below 1GHz.
- 2: The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 3MHz for peak detection (PK) at frequency above 1GHz.
- 3: Modify the unit for continuous operation: use the settings shown above, then correct the reading by subcontracting the peak to average duty cycle correction factor  $20\log(\text{duty cycle})$ , derived from the appropriate duty cycle calculation.

## Field strength of emissions and Restricted bands

### Limits

According to §15.249 (a) & RSS-210 A2.9(a) , the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

| Fundamental frequency | Field strength of fundamental<br>(millivolts/meter) | Field strength of harmonics<br>(microvolts/meter) |
|-----------------------|-----------------------------------------------------|---------------------------------------------------|
| 902–928 MHz           | 50                                                  | 500                                               |
| 2400–2483.5 MHz       | 50                                                  | 500                                               |
| 5725–5875 MHz         | 50                                                  | 500                                               |
| 24.0–24.25 GHz        | 250                                                 | 2500                                              |

According to §15.249 (c)& RSS-210 B.10, Field strength limits are specified at a distance of 3 meters.

According to §15.249 (d)& RSS-210 B.10, Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209& RSS-Gen, whichever is the lesser attenuation.

According to §15.205 and RSS-GEN 8.10 Unwanted emissions falling into restricted bands in §15.205 (a) and RSS-GEN 8.10 Table 7 shall comply with the limits specified in §15.209 and RSS-Gen.

| Frequency<br>MHz | Field Strength<br>uV/m | Field Strength<br>dBµV/m | Detector |
|------------------|------------------------|--------------------------|----------|
| 30-88            | 100                    | 40                       | QP       |
| 88-216           | 150                    | 43.5                     | QP       |
| 216-960          | 200                    | 46                       | QP       |
| 960-1000         | 500                    | 54                       | QP       |
| Above 1000       | 500                    | 54                       | AV       |
| Above 1000       | 5000                   | 74                       | PK       |

## Field strength of emissions and Restricted bands

According to C63.10, if the peak (or quasi-peak) measured value complies with the average limit, it is unnecessary to perform an average measurement, so AV emission value did not show in below table if the peak value complies with average limit.

EUT: Module for Lighting kit

M/N: BLELED

Operating Condition: Tx; 2402MHz

For QP Value

| Radiated Emission |                         |                  |                      |                      |                    |              |            |               |
|-------------------|-------------------------|------------------|----------------------|----------------------|--------------------|--------------|------------|---------------|
| Value             | Emissions Frequency MHz | E-Field Polarity | Reading Level dBμV/m | Correction Factor dB | QP Emission dBμV/m | Limit dBμV/m | Margin dBm | Emission Type |
| QP                | 701.664375              | H                | 4.85                 | 27.4                 | 32.25              | 46.00        | 13.75      | Spurious      |
| QP                | 39.551250               | V                | 15.88                | 16.1                 | 31.98              | 40.00        | 8.02       | Spurious      |

For Peak Value

| Radiated Emission |                         |                  |                      |                      |                    |              |            |               |

## 8.2 Out of Band Emissions

### Test Method

- 1 Use the following spectrum analyzer settings:  
Span = wide enough to capture the peak level of the in-band emission and all spurious  
RBW = 100 kHz, VBW  $\geq$  RBW, Sweep = auto, Detector function = peak, Trace = max hold.
- 2 Allow the trace to stabilize, use the peak and delta measurement to record the result.
- 3 The level displayed must comply with the limit specified in this Section.

### Limits

According to §15.249(d) & RSS-210 B.10 Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209 and RSS-Gen, whichever is the lesser attenuation.

## 8.3 20dB Bandwidth & 99% Occupied Bandwidth

### Test Method

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Position the EUT without connection to spectrum analyser. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
3. Measure the frequency difference of two frequencies that were attenuated 20dB/99% from the reference level. Record the frequency difference as the emission bandwidth.

### Limits:

According to 15.215 (c) Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated. The requirement to contain the designated bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If a frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.

According to RSS-Gen 6.7 when an occupied bandwidth value is not specified in the applicable RSS, the transmitted signal bandwidth to be reported is to be its 99% emission bandwidth, as calculated or measured.

20dB Bandwidth & 99% Occupied Bandwidth

| Frequency | 20dB Bandwidth | 99% Bandwidth | Limit |
|-----------|----------------|---------------|-------|
| MHz       | MHz            | MHz           | MHz   |
| 2402      | 1.063          | 1.041         | --    |

Date: 4.SEP.2019 11:49:02

2402MHz

20dB Bandwidth & 99% Occupied Bandwidth

| Frequency | 20dB Bandwidth | 99% Bandwidth | Limit |
|-----------|----------------|---------------|-------|
| MHz       | MHz            | MHz           | MHz   |
| 2440      | 1.085          | 1.056         | --    |

Date: 4.SEP.2019 12:01:45

2440MHz

20dB Bandwidth & 99% Occupied Bandwidth

| Frequency | 20dB Bandwidth | 99% Bandwidth | Limit |
|-----------|----------------|---------------|-------|
| MHz       | MHz            | MHz           | MHz   |
| 2480      | 1.136          | 1.107         | --    |
