Test Report

USA FCC Part 15.209

CANADA RSS-Gen, RSS-210

(*) Identification of item tested	Rechargeable hearing instrument
(*) Trademark	ReSound, Beltone, Interton, GN Hearing, Danavox, Audigy, Jabra, GN Audio
(*) Model and /or type reference	LUBR90
Other identification of the product	FCC ID: X26LUBR90 IC: 6941C-LUBR90
(*) Features	BT 1/2Mbit, proximity & MI radio, rechargeable battery, IP68 enclosure HW version: LUBR90,V2,C6.0 SW version: Dooku3
Applicant	GN Hearing A/S Lautrupbjerg 7, DK-2750 Ballerup, Denmark
Test method requested, standard	USA FCC Part 15.209 (10-1-20 Edition): Radiated emission limits; general requirements. CANADA RSS-Gen Issue 5 amendment 1 (March 2019). General Requirements for Compliance of Radio Apparatus. CANADA RSS-210 Issue 11 (June 2024). Licence-Exempt Radio Apparatus: Category I Equipment ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices.

Competences and guarantees

DEKRA Testing and Certification S.A.U. is a testing laboratory accredited by the National Accreditation Body (ENAC -Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification S.A.U. is an FCC-recognized accredited testing laboratory with appropriate scope of accreditation that covers the performed tests in this report.

DEKRA Testing and Certification S.A.U. is an ISED-recognized accredited testing laboratory, CABid: ES1909, Company Number: 4621A, with the appropriate scope of accreditation that covers the performed tests in this report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification S.A.U. has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification S.A.U. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification S.A.U. at the time of performance of the test.

DEKRA Testing and Certification S.A.U. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification S.A.U.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification S.A.U.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification S.A.U. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Testing and Certification S.A.U. internal document PODT000.

The total uncertainty of the measurement system for the radiated emissions of EUT from 9 KHz to 30 MHz is:
Measurement uncertainty $\leq \pm 3,08$ dB with factor ($k = 2$).

The total uncertainty of the measurement system for the radiated emissions of EUT from 30 MHz to 1 GHz is:
Measurement uncertainty $\leq \pm 5,35$ dB with factor ($k = 2$).

The total uncertainty of the measurement system for the conducted testing of EUT is:
Field strength of fundamental and harmonic emissions: Measurement uncertainty $\leq \pm 4,32$ dB
Occupied Channel Bandwidth: Measurement uncertainty $\leq \pm 1,40$ %

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample consists of a rechargeable wireless hearing aid.
3. The next page contains a statement from the client regarding the different brand versions of the device under test.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of results. The laboratory is not responsible for such information and it is not covered by accreditation.

GN Hearing A/S

20.03.2025

Statement of equivalence

As manufacturer of the "LUBR90" hearing aid, GN Hearing A/S, hereby confirm that the devices may be marketed under several different brands. There are no differences in electronics or mechanics between the different brand versions. The only difference is the brand name appearing on the devices.

Consequently, all devices marketed under below brands will have equivalent electrical and mechanical properties and performance as the model tested which is the ReSound "LUBR90" hearing aid version.

GN Hearing "LUBR90" hearing aid may be marketed under the brands:

- GN Hearing A/S
- GN Audio A/S
- ReSound
- Beltone
- Jabra
- Interton
- Audigy
- Danavox

Sincerely,

DocuSigned by:

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the semianechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

Remarks and comments

The tests have been performed by the technical personnel: Victoria Olmedo Villalba.

TEST CONDITIONS

(*): Data provided by the client.

POWER SUPPLY (*):

Vnominal: 3.7 V
Type of Power Supply: Battery

ANTENNA (*):

Type of Antenna: Magnetic Induction coil
Maximum Declared Antenna Gain: N/A

TEST FREQUENCIES (*):

Modulation	Data rates	Channel
Proprietary protocol MI	Proprietary	10.667 MHz

During transmitter test the EUT was controlled by a SW tool provided by the client to operate in a continuous transmit mode on the modulation schemes and test channels as required.

CONDUCTED MEASUREMENTS:

The equipment under test was set up in a shielded room and it is connected to the TS8997 using a low loss RF cable. The reading of the spectrum analyser is corrected taking into account the cable loss.

RADIATED MEASUREMENTS:

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna is situated at a distance of 3 m (Bilog antenna for the range 30 MHz to 200 MHz) and at a distance of 1 m (Loop antenna for the range 9 kHz to 30 MHz) due to its extremely low emission. The maximum peak value of the fundamental emission was measured as the worst case.

For radiated emissions in the range 9 kHz to 30 MHz performed at a distance closer than the distance specified in the standard, an inverse proportionality factor of 40 dB per decade is used to normalize the measured data for determining compliance.

The equipment under test was set up on a non-conductive platform above the ground plane and its situation and orientation were varied to find the maximum radiated emission. It was also rotated 360°.

In the range between 9 kHz and 30 MHz the measurements were made in the three different orientation planes of the loop antenna to determine the maximum received field.

Measurements above 30 MHz up to 200 MHz were made in both horizontal and vertical planes of polarization and the measuring antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyser. This correction factor includes antenna factor and cable loss.

Radiated measurements setup $f < 30$ MHz:

Radiated measurements setup from 30 MHz to 200 MHz:

TEST CASES DETAILS

Occupied Channel Bandwidth 99%

Limits

Specification

* RSS-Gen Issue 5, Clause 6.7 Occupied bandwidth (or 99% emission bandwidth):

The occupied bandwidth or the “99% emission bandwidth” is defined as the frequency range between two points, one above and the other below the carrier frequency, within which 99% of the total transmitted power of the fundamental transmitted emission is contained. The occupied bandwidth shall be reported for all equipment in addition to the specified bandwidth required in the applicable RSSs.

Modulation: MI

Results

Freq (MHz)	Freq Peak (MHz)	99OBW (MHz)

Modulation = MI Frequency MHz = 10.66000

Images:

FCC 15.209 (a) / RSS-Gen 8.9 / RSS-210 B.4 (Fundamental emission)

Limits

The emissions from an intentional radiator shall not exceed the field strength levels specified in the following table (see §15.205(c) / RSS-Gen):

Frequency Range (MHz)	Field strength (µV/m)	Field strength (dBµV/m)	Magnetic field strength (H-Field) (µA/m)	Measurement distance (m)
0.009 - 0.490	2400/F(kHz)	-	6.37/ F(kHz)	300
0.490 - 1.705	24000/F(kHz)	-	63.7/ F(kHz)	30
1.705 - 30.0	30	29.54	0.08	30
30 - 88	100	40	-	3
88 - 216	150	43.5	-	3
216 - 960	200	46	-	3
Above 960	500	54	-	3

Additionally, the level of any transmitter unwanted emission shall not exceed the level of the transmitter's fundamental emission.

Modulation: MI

Results

Freq (MHz)	Freq Peak (MHz)	Pk Field (dBµV/m)
10.667	10.75625	38.60

E (dBµV/m) measured at 1 m (Peak value)	38.60
E (dBµV/m) extrapolated to 30 m (40 dB/decade)	-20.48
Equivalent level (dBµA/m) at 30 m	-71.98

Verdict

Pass
