

EMC TEST REPORT

COMPANY: ELTAV Wireless Monitoring Limited
PRODUCT: Tunnelling Valve Device Router (TVDR)

REPORT NO: 100923093LHD-001

WRITTEN BY: G Aldridge

REVIEWED BY: D Legge

TEST ENGINEER: G Aldridge

ISSUE: 3

DATE: 12th February 2014

TOTAL PAGES: 167

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

Contents	Page No.

1. JOB DESCRIPTION

Equipment: Tunnelling Valve Device Router

Equipment Model Name: TVDR

PCB Serial No.: 9311120143

Phase: Compliance

Customer: ELTAV Wireless Monitoring Limited
15 Hatassia Street
43654 Ranana
Israel

Test Plan Reference: -

Test Standards: CFR 47 Part 15:109
CFR 47 Part 15:205
CFR 47 Part 15:249
RSS 210 Issue 8
RSS-Gen Issue 3

FCC Ident: X2VVDR000XX

IC Ident: 8876A-VDR000XX

Test Location: Intertek Testing & Certification Ltd
Unit D, Imperial Park
Randalls Way
Leatherhead
Surrey KT22 7TA

Test Work Started: 18th February 2013

Test Work Completed: 25th January 2014

2. TEST SUMMARY

2.1. Standard: CRF 47 Part 15:249

TEST STANDARD	TEST	COMMENT
FCC CFR47 Part 15.107	Conducted Emissions	Note 1
FCC CFR47 Part 15.109	Radiated Emissions	Pass
FCC CFR47 Part 15.205	Restricted Bands of Operation	Pass
FCC CFR47 Part 15.249	Radiated Emissions	Pass

Note 1: This test is not applicable as the EUT is powered by dc in the range 7 – 36V.

2.2. RSS210 Issue 8 & RSS-Gen Issue 3

TEST STANDARD	TEST	COMMENT
RSS-210: A8.2 (a)	-6dB Bandwidth	Pass
RSS-210: A8.2 (b)	Power Spectral Density	Pass
RSS-210: A8.4 (4)	Transmitter Maximum Output Power	Pass
RSS-210: A8.5	Out of Band Emissions	Pass
RSS-Gen: 4.6.1	Occupied Bandwidth	Pass

All of the above tests have been carried out to meet the requirements of ANSI C63.4:2009.

2.3. Modifications

No modifications were carried out on the EUT during testing

3. EQUIPMENT UNDER TEST (EUT)

3.1. Description of the EUT

The TVDR is a wireless router using the ZigBee frequency band. It provides the ability to monitor several devices such as a WKVD QTR reporting its valve position, status etc which is then sent to a PC via the Ethernet cable connected to the TVDR.

The TVDR is powered using 7V dc to 36V dc (24V Nominal used for tests) which is supplied from an external source such as a dc distribution network. In addition to the external supply the TVDR also has an internal battery of 4V dc.

The EUT has an external antenna only and was tested with a FT-RF OA-242503S-NM 3dBi gain omni directional antenna and is the antenna used when installed. The system and antenna are professionally installed on site and tested by the manufacturer.

The EUT was tested as received with no external visible signs of damage and was of production quality.

3.2. EUT Modes of Operation

1) Receive Mode:

- Continuously receiving in the following states

Channel	Transmission	Frequency (GHz)
11	Receive Data – Mode 1	2.405
18	Receive Data – Mode 2	2.440
26	Receive Data – Mode 3	2.480

2) Transmit Mode:

- Continuously transmitting in the following states:-

Channel	Transmission	Frequency (GHz)
11	Streaming Data – Mode 4	2.405
18	Streaming Data – Mode 5	2.440
26	Streaming Data – Mode 6	2.480

3.3. EUT Configuration Diagram

3.4. EUT Support Equipment

None.

3.5. Cables Associated With the EUT

EUT PORT	Cable Description	LENGTH (m)	TERMINATION/LOAD
Antenna Port	-	-	3dBi Antenna

4. RADIATED EMISSIONS

4.1. Radiated Emissions Test Method

The testing was performed in accordance with ANSI C63.4:2009, American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9kHz to 40GHz.

Testing was conducted in a semi-anechoic chamber which meets the NSA requirements of CISPR 16 and CISPR 22. An emissions signature was obtained with the measuring antenna placed 3m from the EUT. Final measurements were carried out at frequencies falling within 10dB of the limit line.

4.2. Radiated Emissions Test Results

The results are given in Tables 1 to 24 and Graphs 1 to 120.

4.3. Radiated Emissions Conclusions

The EUT complied with the limits of FCC part 15, clause 109 Class B and part 15 clause 249.

4.4. Measurement Uncertainty

30MHz to 25GHz ± 5.7 dB

The measurement uncertainties have been determined at a confidence level of not less than 95%.

Table 1 Radiated Emissions Test Results – Mode 1 – Receive Ch11 – Horizontal.

Standard: FCC Part 15.109

Test: Radiated Emissions

Port: Enclosure

Units of measurement:

Radiated Emissions <1GHz

Radiated Emissions >1GHz

11. ANNEX A: RF EXPOSURE EVALUATION

FCC ID: T7VEM250B

The maximum conducted power specified in manual is 3dBm; therefore, to comply with RF Exposure Requirement, the SAR evaluation is considered.

The 1-g SAR test exclusion threshold for 100 MHz to 6 GHz at test separation distances ≤ 50 mm is determined by:

$$\begin{aligned} &[(\text{max. power of channel(average), including tune-up tolerance, mW})/(\text{min. test separation distance,mm})]*[\sqrt{f(\text{GHz})}] \\ &= [39.63/200]*[\sqrt{(2.40)}] \\ &= 0.306 \end{aligned}$$

Since the above calculation is less than 3.0, the product fulfils the RF exposure requirement without SAR testing.

Remark:

1. When the minimum test separation distance is $< 5\text{mm}$, a distance of 5mm is applied to determine SAR test exclusion.

12. ANNEX B: REGISTRATION

FEDERAL COMMUNICATIONS COMMISSION

Laboratory Division
7435 Oakland Mills Road
Columbia, MD 21046

April 19, 2012

Registration Number: 737726

Intertek
Unit D,
Imperial Park,
Leatherhead, KT22 7TS
United Kingdom

Attention: David Harvey, Consultant Engineer

Re: Measurement facility located at Leatherhead, United Kingdom
Anechoic chamber (3 meters)
Date of Renewal: April 19, 2012

Dear Sir or Madam:

Your request for renewal of the registration of the subject measurement facility has been received. The information submitted has been placed in your file and the registration has been renewed. The name of your organization will remain on the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 and 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website www.fcc.gov under E-Piling, OET Equipment Authorization Electronic Filing, Test Firms.

Sincerely,

Phyllis Parrish
Industry Analyst

February 7, 2011

OUR FILE: 46405-2042
Submission No: 145396

Intertek Commercial & Electrical
Unit D Imperial Park Randalls Way
Leatherhead, SRY, KT22 7SB
United Kingdom

Attention: Dave Feasey

Dear Sir/Madame:

The Bureau has received your application for the renewal of a 3m alternative test site. Be advised that the information received was satisfactory to Industry Canada. The following number(s) is now associated to the site(s) for which registration / renewal was sought (**Site# 2042F-1**). Please reference the appropriate site number in the body of test reports containing measurements performed on the site. In addition, please keep for your records the following information;

- The company address code associated to the site(s) located at the above address is: **2042F**

Furthermore, to obtain or renew a unique site number, the applicant shall demonstrate that the site has been accredited to ANSI C63.4-2003 or later. A scope of accreditation indicating the accreditation by a recognized accreditation body to ANSI C63.4-2003 or later shall be accepted. Please indicate in a letter the previous assigned site number if applicable and the type of site (example: 3 metre OATS or 3 metre chamber). If the test facility is not accredited to ANSI C63.4-2003 or later, the test facility shall submit test data demonstrating full compliance with the ANSI standard. The Bureau will evaluate the filing to determine if recognition shall be granted.

The frequency for re-validation of the test site and the information that is required to be filed or retained by the testing party shall comply with the requirements established by the accrediting organization. However, in all cases, test site re-validation shall occur on an interval not to **exceed three years**. There is no fee or form associated with an OATS filing. OATS submissions are encouraged to be submitted electronically to the Bureau using the following URL;

http://strategis.ic.gc.ca/epic/internet/inceb-bhst.nsf/en/h_tt00052e.html.

If you have any questions, you may contact the Bureau by e-mail at certification.bureau@ic.gc.ca Please reference our file and submission number above for all correspondence.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Dalwinder Gill".
