### 1.3 Objective and Test Methodology

The Objective of this Test Report was to document the compliance of the iKeyless, LLC dba Car Keys Express Appliance (Model(s): ROKSBX-1XX,) to the requirements of the following Standards:

- Part 2, Subpart J, Part 15, Subparts A and C, section 15.247 of the Federal Communication Commission's rules.
- ANSI C63.10-2013 of the American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

### 1.4 Measurement Uncertainty

| Parameter                        | Expanded Measurement uncertainty |
|----------------------------------|----------------------------------|
| RF output power with Power Meter | $\pm 1.488$ dB                   |
| Occupied Channel Bandwidth       | $\pm 453.927$ Hz                 |
| RF Conducted test with Spectrum  | $\pm 2.77$ dB                    |
| AC Power Line Conducted Emission | $\pm 2.66$ dB                    |
| Radiated Below 1G                | $\pm 3.57$ dB                    |
| Radiated Above 1G                | $\pm 5.32$ dB                    |

The test results with statement of conformity, the decision rules are based on the specifications and standards. The test results will not take the measurement uncertainty into account.

### 1.5 Environmental Conditions and Test Date

| Test Site           | Test Date                      | Temperature (°C) | Relative Humidity (%) | Test Engineer |
|---------------------|--------------------------------|------------------|-----------------------|---------------|
| Conduction (Con-01) | Apr. 07, 2021                  | 25.5             | 55                    | Brian Chang   |
| Radiated (966A)     | May 19, 2021 –<br>May 28, 2021 | 17.2-20.1        | 57-61                 | Kevin Tsou    |
| Conducted (TH-02)   | May 29, 2021                   | 22.5             | 60                    | Blake Wang    |

### 1.6 Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Linkou Laboratory) to collect test data is located on

☒ No.6, Wende 2Rd., Guishan Dist., Taoyuan City 33382, Taiwan (R.O.C.).

Bay Area Compliance Laboratories Corp. (Linkou Laboratory) Lab is accredited to ISO 17025 by Taiwan Accreditation Foundation (TAF code: 3546) by Mutual Recognition Agreement (MRA). The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database. The FCC Registration No.: 0027578244. Designation No.: TW3546. The Test Firm Registration No.: 181430.

## 2 System Test Configuration

### 2.1 Test Channels and Description of Worst Test Configuration

The system was configured for testing in testing mode which was provided by manufacturer. No special accessory, No modification was made to the EUT and No special equipment used during test. And this device is the AP/STA and working in non-DFS Band.

For Wi-Fi 2.4G mode, there are totally 11 channels.

| Channel | Frequency (MHz) | Channel | Frequency (MHz) |
|---------|-----------------|---------|-----------------|
| 1       | 2412            | 7       | 2442            |
| 2       | 2417            | 8       | 2447            |
| 3       | 2422            | 9       | 2452            |
| 4       | 2427            | 10      | 2457            |
| 5       | 2432            | 11      | 2462            |
| 6       | 2437            | -       | -               |

Note: For 802.11b/g/n HT20: Channel 1, 6 and 11 were tested.

The worst-case data rates are determined to be as follows for each mode based upon investigation by measuring the Peak power and PSD across all data rates bandwidths, and modulations. Radiated below 1G were tested worst output power.

| Modulation Used for Conformance Test |                 |           |                 |
|--------------------------------------|-----------------|-----------|-----------------|
| Configuration                        | N <sub>TX</sub> | Data Rate | Worst Data Rate |
| IEEE 802.11b                         | 1               | 1-11 Mbps | 1 Mbps          |
| IEEE 802.11g                         | 1               | 6-54 Mbps | 6 Mbps          |
| IEEE 802.11n HT 20                   | 1               | MCS 0-7   | MCS 0           |

| Worst Case of Power Setting |                 |                |        |         |
|-----------------------------|-----------------|----------------|--------|---------|
| EUT Exercise Software       |                 | RFTesTool v5.8 |        |         |
| Configuration               | N <sub>TX</sub> | Low CH         | Mid CH | High CH |
| IEEE 802.11b                | 1               | 68             | 80     | 66      |
| IEEE 802.11g                | 1               | 58             | 78     | 63      |
| IEEE 802.11n HT 20          | 1               | 62             | 79     | 57      |

### 2.2 Support Equipment List and External Cable List

| No. | Description | Manufacturer | Model Number   | Serial Number |
|-----|-------------|--------------|----------------|---------------|
| A   | Notebook    | DELL         | Latitude E6410 | PP27LA001     |

### 2.3 Block Diagram of Test Setup

### 2.4 Duty Cycle

All measurements are to be performed with the EUT transmitting at 100% duty cycle at its maximum power control level; however, if 100% duty cycle cannot be achieved, measurements of duty cycle, x, and maximum power transmission duration, T, are required for each tested mode of operation.

| Configuration      | On Time (ms) | Period (ms) | Duty Cycle (%) | Duty Factor (dB) |
|--------------------|--------------|-------------|----------------|------------------|
| IEEE 802.11b       | 100.00       | 100.00      | 100.00         | 0.00             |
| IEEE 802.11g       | 1.36         | 1.44        | 94.47          | 0.25             |
| IEEE 802.11n HT 20 | 1.29         | 1.36        | 95.19          | 0.21             |

\*Note: Duty Factor = 10\*log (1/Duty cycle)

### 3 Summary of Test Results

| FCC Rules                    | Description of Test                      | Result     |
|------------------------------|------------------------------------------|------------|
| §15.247(i), §1.1310, §2.1091 | Maximum Permissible Exposure (MPE)       | Compliance |
| §15.203                      | Antenna Requirement                      | Compliance |
| §15.207(a)                   | AC Line Conducted Emissions              | Compliance |
| §15.205, §15.209, §15.247(d) | Spurious Emissions                       | Compliance |
| §15.247(a)(2)                | 6 dB Emission Bandwidth                  | Compliance |
| §15.247(b)(3)                | Maximum Peak Output Power                | Compliance |
| §15.247(d)                   | 100 kHz Bandwidth of Frequency Band Edge | Compliance |
| §15.247(e)                   | Power Spectral Density                   | Compliance |

## 4 FCC§15.247(i), §1.1307, § 2.1091 – Maximum Permissible Exposure (MPE)

### 4.1 Applicable Standard

According to subpart 15.247(i) and subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

#### Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |                               |                               |                                     |                          |
|---------------------------------------------------------|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| Frequency Range (MHz)                                   | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Averaging Time (minutes) |
| 0.3–1.34                                                | 614                           | 1.63                          | *(100)                              | 30                       |
| 1.34–30                                                 | 824/f                         | 2.19/f                        | *(180/f <sup>2</sup> )              | 30                       |
| 30–300                                                  | 27.5                          | 0.073                         | 0.2                                 | 30                       |
| 300–1500                                                | /                             | /                             | f/1500                              | 30                       |
| 1500–100,000                                            | /                             | /                             | 1.0                                 | 30                       |

f = frequency in MHz; \* = Plane-wave equivalent power density;

According to §1.1310 and §2.1091 RF exposure is calculated.

**Calculated Formulary:** Predication of MPE limit at a given distance

$S = PG/4\pi R^2$  = power density (in appropriate units, e.g. mW/cm<sup>2</sup>);

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

For simultaneously transmit system, the calculated power density should comply with:

$$\sum_i \frac{S_i}{S_{Limit,i}} \leq 1$$

## 4.2 RF Exposure Evaluation Result

### MPE Evaluation:

| Mode            | Frequency Range (MHz) | Antenna Gain |           | Target Power |          | Evaluation Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | MPE Limit (mW/cm <sup>2</sup> ) |
|-----------------|-----------------------|--------------|-----------|--------------|----------|--------------------------|-------------------------------------|---------------------------------|
|                 |                       | (dBi)        | (numeric) | (dBm)        | (mW)     |                          |                                     |                                 |

| LTE Band 13     | 779.5-784.5           | 2.00         | 1.5849    | 25.00        | 316.2278 | 20                       | 0.0998                              | 0.52                            |
| LTE Band 14     | 790.5-795.5           | 2.00         | 1.5849    | 25.00        | 316.2278 | 20                       | 0.0998                              | 0.53                            |
| LTE Band 66     | 1710.7-1779.3         | 3.00         | 1.9953    | 25.00        | 316.2278 | 20                       | 0.1256                              | 1.00                            |
| LTE Band 71     | 665.5-695.5           | 2.00         | 1.5849    | 25.00        | 316.2278 | 20                       | 0.0998                              | 0.45                            |

Note: Wi-Fi 2.4G and Wi-Fi 5G can't simultaneously.

Wi-Fi and WWAN can transmit simultaneously, MPE evaluation is as below formula:  
 $PD1/Limit1 + PD2/Limit2 + \dots < 1$ , PD (Power Density)

### The worst case is as below:

Max MPE of Wi-Fi + Max MPE of LTE  
 $= 0.0953/1.0 + 0.0998/0.45 = 0.3171 < 1.0$

**Result:** MPE evaluation of single and simultaneous transmission meet the requirement of standard.

## 5 FCC §15.203 - Antenna Requirements

### 5.1 Applicable Standard

According to § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna does not exceed 6dBi

### 5.2 Antenna List and Details

| Brand     | Model                | Antenna Type | Antenna Gain | Result     |
|-----------|----------------------|--------------|--------------|------------|
| ARistotle | RFA-25-JP189-16W-500 | PIFA         | 2.80 dBi     | Compliance |

The EUT have internal antennas arrangement and fulfill the requirement of this section.

## 6 FCC §15.207 - AC Line Conducted Emissions

### 6.1 Applicable Standard

According to FCC §15.207,

For an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50  $\mu$ H/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequencies ranges.

| Frequency (MHz) | Conducted Limit (dBuV)     |                            |
|-----------------|----------------------------|----------------------------|
|                 | Quasi-Peak                 | Average                    |
| 0.15-0.5        | 66 to 56 <sup>Note 1</sup> | 56 to 46 <sup>Note 2</sup> |
| 0.5-5           | 56                         | 46                         |
| 5-30            | 60                         | 50                         |

Note 1: Decreases with the logarithm of the frequency. Note 2: A linear average detector is required

### 6.2 EUT Setup and Test Procedure

Note: 1. Support units were connected to second LISN.  
2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The setup of EUT is according with per ANSI C63.10-2013 measurement procedure. The specification used was with the FCC Part 15.207 limits. The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations

| Frequency Range  | Receiver RBW |
|------------------|--------------|
| 150 kHz - 30 MHz | 9 kHz        |

During the conducted emission test, the adapter was connected to the outlet of the LISN. Maximizing procedure was performed on the six (6) highest emissions of the EUT. All data was recorded in the Quasi-peak and average detection mode.

### 6.3 Test Equipment List and Details

| Description                      | Manufacture     | Model                | Serial No. | Cal. Date. | Cal. Due.  |
|----------------------------------|-----------------|----------------------|------------|------------|------------|
| AC Line Conduction Room (Con-01) |                 |                      |            |            |            |
| Two-Line V-Network               | Rohde & Schwarz | ENV216               | 100010     | 2020/09/14 | 2021/09/13 |
| Pulse Limiter                    | SCHWARZBECK     | VSTD 9561-F          | 00432      | 2020/09/11 | 2021/09/10 |
| ESR EMI Test Receiver            | Rohde & Schwarz | ESR3                 | 102430     | 2021/05/05 | 2022/05/04 |
| RF Cable                         | EMCI            | EMCCFD300-BM-BM-8000 | 180526     | 2020/08/18 | 2021/08/17 |
| Software                         | Audix           | e3 v9                | E3LK-03    | N.C.R      | N.C.R      |

**\*Statement of Traceability:** The testing equipment's listed above have finished the calibration by Electronics Testing Center, Taiwan (ETC) or other laboratories which were accredited by TAF or equivalent organizations. The calibration result could be traceable to the International System of Units (SI).

5

Note:

Level = Read Level + Factor.

Over Limit (Margin) = Level – Limit Line.

Factor = (LISN, ISN, PLC or current probe) Factor + Cable Loss + Attenuator

## 7 FCC §15.209, §15.205, §15.247(d) – Spurious Emissions

### 7.1 Applicable Standard

As per FCC §15.35(d): Unless otherwise specified, on any frequency or frequencies above 1000 MHz, the radiated emission limits are based on the use of measurement instrumentation employing an average detector function.

Unless otherwise specified, measurements above 1000 MHz shall be performed using a minimum resolution bandwidth of 1MHz.

As Per FCC §15.205(a) except as show in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

| MHz               | MHz                 | MHz           | GHz         |
|-------------------|---------------------|---------------|-------------|
| 0.090-0.110       | 13.36-13.41         | 399.9-410     | 4.5-5.15    |
| 0.495-0.505       | 16.42-16.423        | 608-614       | 5.35-5.46   |
| 2.1735-2.1905     | 16.69475-16.69525   | 960-1240      | 7.25-7.75   |
| 4.125-4.128       | 25.5-25.67          | 1300-1427     | 8.025-8.5   |
| 4.17725-4.17775   | 37.5-38.25          | 1435-1626.5   | 9.0-9.2     |
| 4.20725-4.20775   | 73-74.6             | 1645.5-1646.5 | 9.3-9.5     |
| 6.215-6.218       | 74.8-75.2           | 1660-1710     | 10.6-12.7   |
| 6.26775-6.26825   | 108-121.94          | 1718.8-1722.2 | 13.25-13.4  |
| 6.31175-6.31225   | 123-138             | 2200-2300     | 14.47-14.5  |
| 8.291-8.294       | 149.9-150.05        | 2310-2390     | 15.35-16.2  |
| 8.362-8.366       | 156.52475-156.52525 | 2483.5-2500   | 17.7-21.4   |
| 8.37625-8.38675   | 156.7-156.9         | 2690-2900     | 22.01-23.12 |
| 8.41425-8.41475   | 162.0125-167.17     | 3260-3267     | 23.6-24.0   |
| 12.29-12.293      | 167.72-173.2        | 3332-3339     | 31.2-31.8   |
| 12.51975-12.52025 | 240-285             | 3345.8-3358   | 36.43-36.5  |
| 12.57675-12.57725 | 322-335.4           | 3600-4400     | Above 38.6  |

As per FCC §15.209(a): Except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency<br>(MHz) | Field Strength<br>(micro volts/meter) | Measurement Distance<br>(meters) |
|--------------------|---------------------------------------|----------------------------------|
| 0.009 - 0.490      | 2400/F(kHz)                           | 300                              |
| 0.490 - 1.705      | 24000/F(kHz)                          | 30                               |
| 1.705 - 30.0       | 30                                    | 30                               |
| 30 - 88            | 100**                                 | 3                                |
| 88 - 216           | 150**                                 | 3                                |
| 216 - 960          | 200**                                 | 3                                |
| Above 960          | 500                                   | 3                                |

\*\* Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72 MHz, 76-88 MHz, 174-216 MHz or 470-806MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g., Sections 15.231 and 15.241.

As per FCC §15.247 (d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

## 7.2 EUT Setup and Test Procedure

Radiated emission tests were performed in the 3 meters chamber test site, using the setup accordance with the ANSI C63.10-2013. The specification used was the FCC Part 15.209 and FCC 15.247 Limits.

The system was investigated from 30 MHz to 26.5 GHz. During the radiated emission test, the EMI test receiver was set with the following configurations measurement method 6.3 in ANSI C63.10.

| Frequency Range | RBW     | VBW   | Duty cycle | Measurement Detector |
|-----------------|---------|-------|------------|----------------------|
| 30-1000 MHz     | 120 kHz | /     | -          | QP                   |
| Above 1 GHz     | 1 MHz   | 3 MHz | -          | PK                   |
|                 | 1 MHz   | 10 Hz | >98%       | AV                   |
|                 | 1 MHz   | 1/T   | <98%       | AV                   |

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations. All data was recorded in the Quasi-peak detector mode from 30 MHz to 1 GHz and PK and average detector modes for frequencies above 1 GHz.

### 7.3 Test Equipment List and Details

| Description                     | Manufacture           | Model                 | Serial No.           | Cal. Date. | Cal. Due.  |

**\*Statement of Traceability:** The testing equipment's listed above have finished the calibration by Electronics Testing Center, Taiwan (ETC) or other laboratories which were accredited by TAF or equivalent organizations. The calibration result could be traceable to the International System of Units (SI).

## 7.4 Test Result

**Below 1G (30 MHz-1 GHz) test the worst power mode.** (Pre-scan with three orthogonal axis, and worse case as Z axis)

Note:

Result = Reading + Correct Factor.

Margin = Result – Limit.

Correct Factor = Antenna Factor + Cable Loss – Amplifier Gain.

Spurious emissions more than 20 dB below the limit were not reported.

Non-Restricted bands signal was less than fundamental 20 dB or more, that don't need get average result.

**Above 1G (1 GHz-26.5 GHz)**

Note:

Result = Reading + Correct Factor.

Marginal = Result - Limit.

Correct Factor = Antenna Factor + Cable Loss - Amplifier Gain.

Spurious emissions more than 20 dB below the limit were not reported.

Non-Restricted bands signal was less than fundamental 20 dB or more, that don't need get average result.

**Above 1G (1 GHz-26.5 GHz): The worst mode is 802.11b Middle CH.**

Note:

Result = Reading + Correct Factor. Margin = Result – Limit.

Correct Factor = Antenna Factor + Cable Loss – Amplifier Gain.

Spurious emissions more than 20 dB below the limit were not reported.

Non-Restricted bands signal was less than fundamental 20 dB or more, that don't need get average result.

### Conducted Spurious Emissions

| Configuration     | Channel | Frequency (MHz) | Delta Peak to Band Emission (dBc) | Limit (dBc) | Result     |

## 8 FCC §15.247(a)(2) – 6 dB Emission Bandwidth

### 8.1 Applicable Standard

According to FCC §15.247(a) (2),

Systems using digital modulation techniques may operate in the 902–928 MHz, 2400–2483.5 MHz, and 5725–5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.

### 8.2 Test Procedure

According to ANSI C63.10-2013, the steps for the first option are as follows:

- (1) Set RBW = 100 kHz. (2) Set the VBW  $\geq [3 \times \text{RBW}]$ . (3) Detector = peak. (4) Trace mode = max hold.
- (5) Sweep = auto couple. (6) Allow the trace to stabilize. (7) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

### 8.3 Test Equipment List and Details

| Description                  | Manufacture     | Model | Serial No.       | Cal. Date. | Cal. Due.  |
|------------------------------|-----------------|-------|------------------|------------|------------|
| Conducted Room(TH-02)        |                 |       |                  |            |            |
| Signal and Spectrum Analyzer | Rohde & Schwarz | FSV40 | 101434           | 2021/05/12 | 2022/05/11 |

## 9 FCC §15.247(b) (3) – Maximum Output Power

### 9.1 Applicable Standard

According to FCC §15.247(b) (3),

Systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt.

As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.

### 9.2 Test Procedure

- (1) Place the EUT on a bench and set it in transmitting mode.
- (2) Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to measuring equipment, and Add a correction factor to the display.

### 9.3 Test Equipment List and Details

| Description               | Manufacture | Model   | Serial No.       | Cal. Date. | Cal. Due.  |
|---------------------------|-------------|---------|------------------|------------|------------|
| Conducted Room(TH-02)     |             |         |                  |            |            |
| USB Wideband Power Sensor | Agilent     | U2021XA | MY56120026       | 2020/09/14 | 2021/09/13 |
| Cable                     | MTJ         | MT40S   | 620620-MT40S-100 | Each Use   | -          |

**\*Statement of Traceability:** The testing equipment's listed above have finished the calibration by Electronics Testing Center, Taiwan (ETC) or other laboratories which were accredited by TAF or equivalent organizations. The calibration result could be traceable to the International System of Units (SI).

### 9.4 Test Results

| Configuration     | Channel | Frequency (MHz) | Maximum Peak Output Power (dBm) | Maximum Peak Output Power (W) | Limit (dBm) | Result     |
|-------------------|---------|-----------------|---------------------------------|-------------------------------|-------------|------------|
| IEEE 802.11b      | Low     | 2412            | 20.78                           | 0.1197                        | 30          | Compliance |
|                   | Middle  | 2437            | 23.51                           | 0.2244                        | 30          | Compliance |

| IEEE 802.11n HT20 | Low     | 2412            | 22.86                           | 0.1932                        | 30          | Compliance |
|                   | Middle  | 2437            | 23.81                           | 0.2404                        | 30          | Compliance |
|                   | High    | 2462            | 23.37                           | 0.2173                        | 30          | Compliance |

## 10 FCC §15.247(d) – 100 kHz Bandwidth of Frequency Band Edge

### 10.1 Applicable Standard

According to FCC §15.247(d),

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.

If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB.

Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

### 10.2 Test Procedure

- (1) Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- (2) Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
- (3) Set RBW to 100 kHz and VBW of spectrum analyzer to 300 kHz with a convenient frequency span including 100 kHz bandwidth from band edge.
- (4) Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.

### 10.3 Test Equipment List and Details

| Description                  | Manufacture     | Model | Serial No.       | Cal. Date. | Cal. Due.  |
|------------------------------|-----------------|-------|------------------|------------|------------|
| Conducted Room(TH-02)        |                 |       |                  |            |            |
| Signal and Spectrum Analyzer | Rohde & Schwarz | FSV40 | 101434           | 2021/05/12 | 2022/05/11 |

### IEEE 802.11n HT20 Low CH (Left Side)

### IEEE 802.11n HT20 High CH (Right Side)

## 11 FCC §15.247(e) – Power Spectral Density

### 11.1 Applicable Standard

According to FCC §15.247(e),

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. This power spectral density shall be determined in accordance with the provisions of paragraph (b) of this section. The same method of determining the conducted output power shall be used to determine the power spectral density.

### 11.2 Test Procedure

According to ANSI C63.10-2013, Set analyzer center frequency to DTS channel center frequency, And Set the span to 1.5 times the DTS bandwidth. Set the RBW to  $3 \text{ kHz} \leq \text{RBW} \leq 100 \text{ kHz}$ . Set the VBW  $\geq [3 \times \text{RBW}]$ . Detector = peak. Sweep time = auto couple. Trace mode = max hold. (8) Allow trace to fully stabilize. Use the peak marker function to determine the maximum amplitude level within the RBW. If measured value exceeds requirement, then reduce RBW (but no less than 3 kHz) and repeat.

### 11.3 Test Equipment List and Details

| Description                  | Manufacture     | Model | Serial No.       | Cal. Date. | Cal. Due.  |
|------------------------------|-----------------|-------|------------------|------------|------------|
