

Label details (physical)

The product label consists of a tear-resistant matt chrome metallic finished polyester film which is dimensionally stable with good chemical resistance and tolerance to temperature range. The information on the label is printed via compatible thermal transfer ribbon using a Zebra ZT410. The adhesive used is S8015, which is suitable for difficult substrates including low surface energy plastics and coatings.

The UL file number for the base label is MH27538.

Label details (printed information)

Label details (location on product)

The label is applied to the underside of the product enclosure in a slightly recessed location designed to accommodate it.
