

RADIO TEST REPORT – 442937-1TRFWL

Type of assessment:

Final product testing

Applicant:

ORBCOMM Inc.

Product:

SCU Mobile Satellite Earth Station Terminal

Model:

SCU

FCC ID:

XGS-SCU

IC Registration number:

11881A-SCU

Specifications:

- ◆ **FCC 47 CFR Part 25**
- ◆ **RSS-170 Issue 3, July 9 2015**

Date of issue: September 29, 2021

Section 1. Report summary

1.1 Applicant/Manufacturer

Applicant name	ORBCOMM Inc.
Applicant address	395 W Passaic Street, Suite 325, Rochelle Park, NJ 07662 USA
Manufacturer name	Same as applicant
Manufacturer address	Same as applicant

1.2 Test specifications

FCC 47 CFR Part 25	Satellite communications
RSS-170, Issue 3, July 9, 2015	Mobile Earth Stations (MESs) and Ancillary Terrestrial Component (ATC) Equipment Operating in the Mobile-Satellite Service (MSS) Bands

1.3 Test methods

ANSI C63.26-2015	American National Standard for Compliance Testing of Transmitters Used in Licensed Radio services
273109 D01 Equip Auth Guide Part 25 TXReceiver v02r02 (2011)	Equipment Authorization Guidance for Part 25 Transceivers

1.4 Exclusions

None

1.5 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was completed against all relevant requirements of the test standard. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See "Summary of test results" for full details.

1.6 Test report revision history

Revision #	Date of issue	Details of changes made to test report
TRF	September 29, 2021	Original report issued

Section 2. Summary of test results

2.1 Testing location

Test location (s) Cambridge

2.2 Testing period

Test start date September 22, 2021 Test end date September 27, 2021

2.3 Sample information

Receipt date September 21, 2021 Nemko sample ID number(s) 1, 2, 3

2.4 FCC Part 25 test results

Part	Test description	Verdict
§2.1046	Occupied bandwidth	Pass
§25.204	Power limit	Pass
§25.202(f)	Spurious emissions at the antenna terminal	Pass
§25.202(f)	Field strength of spurious emissions	Pass
§25.202(d)	Frequency tolerance, earth stations	Pass

Notes: None

2.5 ISED RSS-GEN, Issue 5 test results

Part	Test description	Verdict
6.7	Occupied bandwidth	Pass
7.3	Receiver radiated emission limits	Not applicable ¹
7.4	Receiver conducted emission limits	Not applicable ¹
8.8	Power Line Conducted Emissions Limits for Licence-Exempt Radio Apparatus	Not applicable ²

Notes: ¹ According to sections 5.2 and 5.3 of RSS-Gen Issue 5, the EUT does not have a stand-alone receiver neither scanner receiver, therefore exempt from receiver requirements.

² EUT is a battery-operated device intended to be installed in a vehicle.

2.6 ISED RSS-170, Issue 3 test results

Part	Test description	Verdict
5.1	Frequency bands	Pass
5.2	Frequency stability	Pass
5.3.2	Transmitter e.i.r.p. for mobile earth stations (MESs)	Pass
5.4.3.1	Transmitter unwanted emissions for MESs in all frequency bands	Pass

Notes: None

Section 3. Information provided by the applicant

3.1 Disclaimer

This section contains information provided by the applicant and has been utilized to support the test plan. Inaccurate information provided by the applicant can affect the validity of the results contained within this test report. Nemko accepts no responsibility for the information contained within this section and the impact it may have on the test plan and resulting measurements.

3.2 EUT information

Product name	SCU Mobile Satellite Earth Station Terminal
Model	SCU
Serial number	53351 21353048
Product description and theory of operation	The device consists of a mobile Satellite communication modem and its antenna. The device is operated with Orbcomm's OG satellite network in VHF band at 148-150.05MHz. The device is designed for industrial equipment control, monitoring and management.

3.3 Technical information

Applicant IC company number	11881A
IC UPN number	SCU
All used IC test site(s) Reg. number	24676
RSS number and Issue number	RSS-170, Issue 3, July 9, 2015
Frequency band	148–150.05 MHz
Frequency Min (MHz)	148.0275
Frequency Max (MHz)	150.0200
RF power Max (W), Conducted	6.3 (38.0 dBm)
Field strength, Units @ distance	N/A
Measured BW (kHz), 99% OBW	2.924
Type of modulation	SDPSK
Emission classification (F1D, G1D, D1D)	G1D
Power requirements	12 V _{DC}
Antenna information	Gain: 2.2 dBi peak, Model: VOE17480786, connector type: Fakra EUT is designed so that the end user may replace a broken antenna. (The EUT has a non-standard antenna jack or electrical connector.)
Stated EIRP, dBm	40.0

3.4 EUT exercise details

- EUT was connected with cable harness provided external power supply port to a DC supply, serial communication interface port to a laptop and I/O ports connection.
- EUT was controlled by application SCAPI to run the satellite module to transmit a modulated signal
- The transmitting signal was set at full power with 4 sec ON and 10 sec OFF.

3.5 EUT test configuration

Table 3.5-1: EUT sub assemblies

Description	Brand name	Model/Part number
Antenna	VOLVO	MN: VOE17480786

Cable harness	EUT	DC Supply / Laptop	1.5
Antenna cable	EUT	Antenna	5.0

Figure 3.5-1: Block diagram

Section 4. Engineering considerations

4.1 Modifications incorporated in the EUT

There were no modifications performed to the EUT during this assessment.

4.2 Technical judgment

None

4.3 Model variant declaration

There were no model variants declared by the applicant.

4.4 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 5. Test conditions

5.1 Atmospheric conditions

Temperature	15–30 °C
Relative humidity	20–75 %
Air pressure	860–1060 mbar

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5\%$, for which the equipment was designed.

Section 6. Measurement uncertainty

6.1 Uncertainty of measurement

UKAS Lab 34 and TIA-603-B have been used as guidance for measurement uncertainty reasonable estimations with regards to previous experience and validation of data. Nemko Canada, Inc. follows these test methods in order to satisfy ISO/IEC 17025 requirements for estimation of uncertainty of measurement for wireless products.

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of $K = 2$ with 95% certainty.

Table 6.1-1: Measurement uncertainty

Test name	Measurement uncertainty, dB
All antenna port measurements	0.55
Occupied bandwidth	4.45
Conducted spurious emissions	1.13
Radiated spurious emissions	3.78
AC power line conducted emissions	3.55

Section 7. Test equipment

7.1 Test equipment list

Table 7.1-1: Equipment list

Equipment	Manufacturer	Model no.	Asset no.	Cal cycle	Next cal.

Note: NCR - no calibration required; VOU – verification on use

Section 8. Testing data

8.1 FCC 2.1049 and RSS-Gen 6.7 Occupied bandwidth

8.1.1 Definitions and limits

FCC:

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission.

ISED:

The emission bandwidth ($\times$ dB) is defined as the frequency range between two points, one above and one below the carrier frequency, at which the spectral density of the emission is attenuated $\times$ dB below the maximum in-band spectral density of the modulated signal. Spectral density (power per unit bandwidth) is to be measured with a detector of resolution bandwidth in the range of 1% to 5% of the anticipated emission bandwidth, and a video bandwidth at least $3\times$ the resolution bandwidth.

When the occupied bandwidth limit is not stated in the applicable RSS or reference measurement method, the transmitted signal bandwidth shall be reported as the 99% emission bandwidth, as calculated or measured.

8.1.2 Test summary

Test date	September 23, 2021
Test engineer	Alvin Liu
Verdict	Pass

8.1.3 Observations, settings and special notes

Measurement performed with reference to ANSI 63.26 section 5.4.4

Spectrum analyser settings for 99% occupied bandwidth:

Resolution bandwidth:	1 – 5 % OBW
Video bandwidth:	$\geq 3 \times$ RBW
Detector mode:	Peak
Trace mode:	Max Hold

8.1.4 Test data

Table 8.1-1: 99 % bandwidth results

Frequency, MHz	99 % occupied bandwidth, kHz

Figure 8.1-4: 26 dB bandwidth on high channel

8.2 FCC 25.204 and RSS-170 5.3.2 Transmitter e.i.r.p. for mobile earth stations

8.2.1 Definitions and limits

FCC:

- (a) In bands shared coequally with terrestrial radio communication services, the equivalent isotropically radiated power transmitted in any direction towards the horizon by an earth station, other than an ESV, operating in frequency bands between 1 and 15 GHz, shall not exceed the following limits except as provided for in paragraph (c) below:
+40 dBW (70 dBm) in any 4 kHz band for $\Theta \leq 0^\circ$
+40 + 3 Θ dBW in any 4 kHz band for $0^\circ < \Theta \leq 5^\circ$
where Θ is the angle of elevation of the horizon viewed from the center of radiation of the antenna of the earth station and measured in degrees as positive above the horizontal plane and negative below it.
- (b) In bands shared coequally with terrestrial radiocommunication services, the equivalent isotropically radiated power transmitted in any direction towards the horizon by an earth station operating in frequency bands above 15 GHz shall not exceed the following limits except as provided for in paragraph (c) below:
+64 dBW (94 dBm) in any 1 MHz band for $\Theta \leq 0^\circ$
+64 + 3 Θ dBW in any 1 MHz band for $0^\circ < \Theta \leq 5^\circ$
where Θ is as defined in paragraph (a) above.
- (c) For angles of elevation of the horizon greater than 5° there shall be no restriction as to the equivalent isotropically radiated power transmitted by an earth station towards the horizon.
- (d) Notwithstanding the e.i.r.p. and e.i.r.p. density limits specified in the station authorization, each earth station transmission shall be conducted at the lowest power level that will provide the required signal quality as indicated in the application and further amended by coordination agreements.

ISED:

The application for MES certification shall state the MES e.i.r.p. that is necessary for satisfactory communication. The maximum permissible e.i.r.p. will be the stated e.i.r.p. plus a 2 dB margin. If a detachable antenna is used, the certification application shall state the recommended antenna type and manufacturer, the antenna gain and the maximum transmitter output power at the antenna terminal.

8.2.2 Test summary

Test date	September 23, 2021
Test engineer	Alvin Liu
Verdict	Pass

8.2.3 Observations, settings and special notes

Measurements performed with reference to ANSI 63.26 section 5.2.3.3 for peak power of narrowband signal using a spectrum analyzer.
Resolution bandwidth of 5 kHz selected in lieu of a 4kHz to satisfy FCC requirement.

Spectrum analyzer settings:

Resolution bandwidth	5 kHz
Video bandwidth	20 kHz
Detector mode	Peak
Trace mode	Max Hold

8.2.4 Test data

Table 8.2-1: Conducted peak output power measurement results – ISSED

Frequency, MHz	Output power, dBm	Gain, dBi	EIRP, dBm	Stated EIRP, dBm	Maximum permissible EIRP, dBm	Margin, dB
148.0275	37.8	2.2	40.0	40.0	42.0	2.0
150.0200	37.3	2.2	39.5	40.0	42.0	2.5

Note: Maximum permissible EIRP = Stated EIRP + 2 dB

Table 8.2-2: Conducted peak output power measurement results – FCC

Frequency, MHz	Output power, dBm/5 kHz	Gain, dBi	EIRP, dBm/5 kHz	EIRP limit, dBm/4kHz	Margin, dB
148.0275	37.8	2.2	40.0	70.0	30.0
150.0200	37.3	2.2	39.5	70.0	30.5

Note: EIRP limit, dBm/4kHz calculated as follows: 40 dBW = 70 dBm

Test data, continued

12:26:06 23.09.2021

Figure 8.2-1: Conducted peak output power on low channel

12:17:54 23.09.2021

Figure 8.2-2: Conducted peak output power on high channel

8.3 FCC 25.202(f) and RSS-170 5.4 Field strength of spurious emissions

8.3.1 Definitions and limits

FCC:

(f) Emission limitations. The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the following schedule:

- (1) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: 25 dB;
- (2) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: 35 dB;
- (3) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 250 percent of the authorized bandwidth: An amount equal to 43 dB plus 10 times the logarithm (to the base 10) of the transmitter power in watts (-13 dBm fixed);
- (4) In any event, when an emission outside of the authorized bandwidth causes harmful interference, the Commission may, at its discretion, require greater attenuation than specified in paragraphs (f) (1), (2) and (3) of this section.

ISED:

The transmitter unwanted emissions shall be measured with the carrier frequency set at both the highest and lowest channels in which the equipment is designed to operate.

The e.i.r.p. density of unwanted and carrier-off emissions in this section shall be averaged over any 2 ms active transmission using a root-mean-square detector with a resolution bandwidth of 1 MHz for broadband emissions and a resolution bandwidth of 1 kHz for discrete emissions, unless stated otherwise.

5.4.3 Mobile Earth Stations

5.4.3.1 Mobile Earth Stations in All Frequency Bands

The average power of unwanted emissions shall be attenuated below the average output power, P (dBW), of the transmitter, as specified below:

- (1) 25 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 50%, up to and including 100% of the occupied bandwidth or necessary bandwidth, whichever is greater;
- (2) 35 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 100%, up to and including 250% of the occupied bandwidth or necessary bandwidth, whichever is greater;
- (3) $43 + 10 \log p$ (watts) in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 250% of the occupied bandwidth or necessary bandwidth, whichever is greater.

8.3.2 Test summary

Test date	September 22, 2021
Test engineer	Alvin Liu
Verdict	Pass

8.3.3 Observations, settings and special notes

The spectrum was searched from 30 MHz to the 10th harmonic.

Radiated spurious measurements were performed at a distance of 3 m per ANSI 63.26 section 5.5.2 on a test site validated to the requirements of ANSI 63.10

Conducted spurious measurements were performed with reference to ANSI 63.26 section 5.7.4

Conducted out-of-band emissions measurements performed with using the power integration method per ANSI 63.26 section 5.7.2(a) and 5.7.3; the measured value is scaled using 10 log (Reference bandwidth/Measurement bandwidth).

Authorized bandwidth (6 kHz) > Occupied bandwidth. Therefore, the authorized bandwidth was used to calculate spurious emission mask.

Spectrum analyser settings for conducted spurious emissions measurements 30 MHz – 2 GHz:

Resolution bandwidth	100 kHz
Video bandwidth	300 kHz
Detector mode	Peak
Trace mode	Max Hold

Spectrum analyser settings for conducted out-of-band emissions measurements outside assigned channel

Span	40 kHz
Resolution bandwidth	50 Hz
Video bandwidth	200 Hz
Detector mode	RMS
Trace mode	Max Hold
Integration bandwidth	Fundamental dBm/4 kHz, 50–100% BW dBm/3 kHz, 100–250% BW dBm/4 kHz, ≥ 250% BW dBm/4 kHz

Spectrum analyser settings for radiated spurious emissions measurements below 1 GHz:

Resolution bandwidth	120 kHz
Video bandwidth	300 kHz
Detector mode	Peak
Trace mode	Max Hold

Spectrum analyser settings for radiated spurious emissions measurements above 1 GHz:

Resolution bandwidth	1 MHz
Video bandwidth	3 MHz
Detector mode	Peak
Trace mode	Max Hold

8.3.4 Test data

Table 8.3-1: Out-of-band unwanted emissions in 50 – 100 % Authorized bandwidth

Frequency, (MHz)	Mean output power, (dBm/4 kHz)	Mean adjacent power 50–100% BW, (dBm/3 kHz)	Scaled mean adjacent power 50–100% BW, (dBm/4 kHz)	Limit, 50–100% BW, (dBm/4 kHz)	Margin, (dB)
148.0275	37.52	2.31	3.56	12.52	8.96
150.0200	37.09	1.67	2.92	12.09	9.17

Note: Scaled power = measured power + 10log(Reference BW/Measurement BW), Limit = mean output power, dBm/4 kHz - 25 dB

Table 8.3-2: Out-of-band unwanted emissions in 100 – 250 % Authorized bandwidth

Frequency, (MHz)	Mean output power, (dBm/4 kHz)	Mean adjacent power 100 – 250% BW, (dBm/4 kHz)	Limit, 100–250% BW, (dBm/4 kHz)	Margin, (dB)
148.0275	37.52	-21.21	2.52	23.73
150.0200	37.09	-20.33	2.09	22.42

Note: Limit = mean output power, dBm/4 kHz - 35 dB

Figure 8.3-7: Conducted spurious emissions, high channel

8.4 FCC 25.202(d) and RSS-170 5.2 Frequency tolerance, Earth stations

8.4.1 Definitions and limits

FCC:

The carrier frequency of each earth station transmitter authorized in these services shall be maintained within 0.001 percent (± 10 ppm) of the reference frequency.

§2.1055 Frequency stability

(a) The frequency stability shall be measured with variation of ambient temperature as follows:

(1) From -30°C to $+50^{\circ}\text{C}$ for all equipment except that specified in paragraphs (a)(2) and (3) of this section

(b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10°C through the range.

(d) The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

ISED:

For mobile earth station equipment, the carrier frequency shall not depart from the reference frequency by more than ± 10 ppm.

8.4.2 Test summary

Test date	September 27, 2021
Test engineer	Alvin Liu
Verdict	Pass

8.4.3 Observations, settings and special notes

Frequency stability measurements were performed with reference to ANSI 63.26 section 5.6.3 and section 5.6.5

Offset was calculated as per the following formula:

$$\frac{F_{\text{Measured}} - F_{\text{reference}}}{F_{\text{reference}}} \times 1 \cdot 10^6$$

Spectrum analyzer settings:

Resolution bandwidth:	50 Hz
Video bandwidth:	$\geq 3 \times \text{RBW}$
Detector mode:	Peak
Trace mode:	Max Hold

8.4.4 Test data

Table 8.4-1: Frequency tolerance measurement result – Low channel

Test conditions	Frequency, Hz	Offset, ppm	Limit, $\pm$ ppm	Margin, ppm
+50 °C, Nominal	148027350	2.2	10.0	7.8
+40 °C, Nominal	148026994	-0.2	10.0	9.8

-30 °C, Nominal	148026990	-0.2	10.0	9.8

Table 8.4-3: Frequency tolerance measurement result – High channel

Test conditions	Frequency, Hz	Offset, ppm	Limit, $\pm$ ppm	Margin, ppm
+50 °C, Nominal	150019840	2.1	10.0	7.9
+40 °C, Nominal	150019502	-0.1	10.0	9.9
+30 °C, Nominal	150019504	-0.1	10.0	9.9
+20 °C, +15 %	150019534	0.1	10.0	9.9
+20 °C, Nominal	150019520		Reference	
+20 °C, -15 %	150019510	-0.1	10.0	9.9
+10 °C, Nominal	150019556	0.2	10.0	9.8
0 °C, Nominal	150019526	0.0	10.0	10.0
-10 °C, Nominal	150019528	0.1	10.0	9.9
-20 °C, Nominal	150019496	-0.2	10.0	9.8
-30 °C, Nominal	150019504	-0.1	10.0	9.9

Section 9. Block diagrams of test set-ups

9.1 Radiated emissions set-up for frequencies below 1 GHz

9.2 Radiated emissions set-up for frequencies above 1 GHz

9.3 Conducted measurement set-up
