A detailed view of a green printed circuit board (PCB) from a hard drive. The board is populated with various electronic components, including a large central integrated circuit (IC), several smaller ICs, capacitors, and resistors. A gold-plated edge connector is visible at the bottom. The PCB is mounted on a black plastic housing, which has several circular mounting holes and a central circular cutout. The overall design is compact and functional, typical of a hard drive's internal electronics.
