For technical support, or to report documentation errors, please visit:

<http://www.quectel.com/support/technical.htm>.

Or email us at: support@quectel.com.

Legal Notices

We offer information as a service to you. The provided information is based on your requirements and we make every effort to ensure its quality. You agree that you are responsible for using independent analysis and evaluation in designing intended products, and we provide reference designs for illustrative purposes only. Before using any hardware, software or service guided by this document, please read this notice carefully. Even though we employ commercially reasonable efforts to provide the best possible experience, you hereby acknowledge and agree that this document and related services hereunder are provided to you on an “as available” basis. We may revise or restate this document from time to time at our sole discretion without any prior notice to you.

Use and Disclosure Restrictions

License Agreements

Documents and information provided by us shall be kept confidential, unless specific permission is granted. They shall not be accessed or used for any purpose except as expressly provided herein.

Copyright

Our and third-party products hereunder may contain copyrighted material. Such copyrighted material shall not be copied, reproduced, distributed, merged, published, translated, or modified without prior written consent. We and the third party have exclusive rights over copyrighted material. No license shall be granted or conveyed under any patents, copyrights, trademarks, or service mark rights. To avoid ambiguities, purchasing in any form cannot be deemed as granting a license other than the normal non-exclusive, royalty-free license to use the material. We reserve the right to take legal action for noncompliance with abovementioned requirements, unauthorized use, or other illegal or malicious use of the material.

Trademarks

Except as otherwise set forth herein, nothing in this document shall be construed as conferring any rights to use any trademark, trade name or name, abbreviation, or counterfeit product thereof owned by Quectel or any third party in advertising, publicity, or other aspects.

Third-Party Rights

This document may refer to hardware, software and/or documentation owned by one or more third parties ("third-party materials"). Use of such third-party materials shall be governed by all restrictions and obligations applicable thereto.

We make no warranty or representation, either express or implied, regarding the third-party materials, including but not limited to any implied or statutory, warranties of merchantability or fitness for a particular purpose, quiet enjoyment, system integration, information accuracy, and non-infringement of any third-party intellectual property rights with regard to the licensed technology or use thereof. Nothing herein constitutes a representation or warranty by us to either develop, enhance, modify, distribute, market, sell, offer for sale, or otherwise maintain production of any our products or any other hardware, software, device, tool, information, or product. We moreover disclaim any and all warranties arising from the course of dealing or usage of trade.

Privacy Policy

To implement module functionality, certain device data are uploaded to Quectel's or third-party's servers, including carriers, chipset suppliers or customer-designated servers. Quectel, strictly abiding by the relevant laws and regulations, shall retain, use, disclose or otherwise process relevant data for the purpose of performing the service only or as permitted by applicable laws. Before data interaction with third parties, please be informed of their privacy and data security policy.

Disclaimer

- a) We acknowledge no liability for any injury or damage arising from the reliance upon the information.
- b) We shall bear no liability resulting from any inaccuracies or omissions, or from the use of the information contained herein.
- c) While we have made every effort to ensure that the functions and features under development are free from errors, it is possible that they could contain errors, inaccuracies, and omissions. Unless otherwise provided by valid agreement, we make no warranties of any kind, either implied or express, and exclude all liability for any loss or damage suffered in connection with the use of features and functions under development, to the maximum extent permitted by law, regardless of whether such loss or damage may have been foreseeable.
- d) We are not responsible for the accessibility, safety, accuracy, availability, legality, or completeness of information, advertising, commercial offers, products, services, and materials on third-party websites and third-party resources.

Safety Information

The following safety precautions must be observed during all phases of operation, such as usage, service or repair of any cellular terminal or mobile incorporating the module. Manufacturers of the cellular terminal should notify users and operating personnel of the following safety information by incorporating these guidelines into all manuals of the product. Otherwise, Quectel assumes no liability for customers' failure to comply with these precautions.

Full attention must be paid to driving at all times in order to reduce the risk of an accident. Using a mobile while driving (even with a handsfree kit) causes distraction and can lead to an accident. Please comply with laws and regulations restricting the use of wireless devices while driving.

Switch off the cellular terminal or mobile before boarding an aircraft. The operation of wireless appliances in an aircraft is forbidden to prevent interference with communication systems. If there is an Airplane Mode, it should be enabled prior to boarding an aircraft. Please consult the airline staff for more restrictions on the use of wireless devices on an aircraft.

Wireless devices may cause interference on sensitive medical equipment, so please be aware of the restrictions on the use of wireless devices when in hospitals, clinics or other healthcare facilities.

Cellular terminals or mobiles operating over radio signal and cellular network cannot be guaranteed to connect in certain conditions, such as when the mobile bill is unpaid or the (U)SIM card is invalid. When emergency help is needed in such conditions, use emergency call if the device supports it. In order to make or receive a call, the cellular terminal or mobile must be switched on in a service area with adequate cellular signal strength. In an emergency, the device with emergency call function cannot be used as the only contact method considering network connection cannot be guaranteed under all circumstances.

The cellular terminal or mobile contains a transceiver. When it is ON, it receives and transmits radio frequency signals. RF interference can occur if it is used close to TV sets, radios, computers or other electric equipment.

In locations with explosive or potentially explosive atmospheres, obey all posted signs and turn off wireless devices such as mobile phone or other cellular terminals. Areas with explosive or potentially explosive atmospheres include fuelling areas, below decks on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles such as grain, dust or metal powders.

About the Document

Revision History

Version	Date	Author	Description
-	2022-05-13	Xiaomeng GUO/ Chris ZHANG	Creation of the document
1.0	2022-06-22	Xiaomeng GUO/ Chris ZHANG	First official release
1.1	2023-02-10	Waller GUO/ Jamie SHI Xiaomeng GUO	- Added n3, n5, and n8 for SG560D-CN (Table 3, Table 6, Table 36, Table38, Table 42 and Table 56). - Updated the video decode speed (Table 4). - Updated the NSA and SA maximum transmission rate of the 5G NR features (Table 4) - Updated the TBD data of the Rx sensitivity (Table 41 and Table 42). - Updated the TBD data of GNSS performance (Table 46). - Updated GNSS antenna design requirement: changed from VSWR: < 2 to VSWR: ≤ 2 (Table 52). - Updated the TBD data of the power consumption (Table 55 and Table 56). - Updated the recommended reflow soldering thermal profile, the recommended thermal profile parameters and related notes (Chapter 8.2). - Updated UART multiplexing relationship (Chapter 4.5 & 4.9).

1 Introduction

This document defines the SG560D series module and describes its air interfaces and hardware interfaces which are connected to your applications.

With this document, you can quickly understand module interface specifications, electrical and mechanical details, as well as other related information of the module. The document, coupled with application notes and user guides, makes it easy to design and set up mobile applications with the module.

Modifications:

Any changes or modifications not expressly approved by Quectel or the party responsible for compliance could void the user's authority to operate the equipment and invalidate the regulatory approval.

Host manufacturer must follow KDB Publication 996369 D04 Modulen Integration Guide.

Host manufacturer is responsible for regression tests to show compliance to the applicable standards due to the following actions:

- 1.any modification done to the module.
- 2.Integration of the module into a host device

Host product manufacturer is responsible for compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification.

Final host product is required to show compliance to Part 15 Subpart B with the modular transmitter installed

Product Marketing Name: Quectel SG560D-WF

FCC Certification Requirements.

According to the definition of mobile and fixed device is described in Part 2.1091(b), this device is a mobile device.

And the following conditions must be met:

1. This Modular Approval is limited to OEM installation for mobile and fixed applications only. The antenna installation and operating configurations of this transmitter, including any applicable source-based timeaveraging duty factor, antenna gain and cable loss must satisfy MPE categorical Exclusion Requirements of 2.1091.
2. The EUT is a mobile device; maintain at least a 20 cm separation between the EUT and the user's body and must not transmit simultaneously with any other antenna or transmitter.
3. A label with the following statements must be attached to the host end product:

This device contains FCC ID: XMR2023SG560DWF

FCC/ISED Regulations restrict operation of this device to Indoor Use Only

4. Antenna Requirements:

- The following antennae were approved with the modules:

Operating Band	Frequency (MHz)	Antenna Type	Antenna P/N	Antenna Gain (dBi)
Bluetooth	2400~2483.5	Dipole	SAA31578A	0.47 dBi
2.4G WiFi				0.47 dBi
5G WiFi	5150~5850			5150~5250 MHz: -0.67 dBi 5250~5350 MHz: -0.19 dBi 5470~5725 MHz: 1.28 dBi 5725~5850 MHz: 1.10 dBi
6E WiFi	5925~7125			5925~6425 MHz: 3.76dBi 6425~6525 MHz: 3.62dBi 6525~6875 MHz: 3.62dBi 6875~7125 MHz: 2.20dBi

- The product is provided with an approved antenna. Use only supplied or approved antenna by Quectel. Any changes or modifications to the Antenna may void the regulatory approvals obtained for the product.
- Host device must comply with FCC Part 15 antenna requirements
- The OEM must design the host so that the antenna will be installed as an integrated antenna for the host containing the SG560D-WF and the end user shall not be able to access, remove or replace the antenna.

5. This module must not transmit simultaneously with any other antenna or transmitter

6. The host end product must include a user manual that clearly defines operating requirements and conditions that must be observed to ensure compliance with current FCC RF exposure guidelines.

For portable devices, in addition to the conditions 3 through 6 described above, a separate approval is required to satisfy the SAR requirements of FCC Part 2.1093

If the device is used for other equipment that separate approval is required for all other operating configurations, including portable configurations with respect to 2.1093 and different antenna configurations.

For this device, OEM integrators must be provided with labeling instructions of finished products.

Please refer to KDB784748 D01 v07, section 8. Page 6/7 last two paragraphs:

A certified modular has the option to use a permanently affixed label, or an electronic label. For a permanently affixed label, the module must be labeled with an FCC ID - Section 2.926 (see 2.2 Certification (labeling requirements) above). The OEM manual must provide clear instructions explaining to the OEM the labeling requirements, options and OEM user manual instructions that are required (see next paragraph).

For a host using a certified modular with a standard fixed label, if (1) the module's FCC ID is not visible when installed in the host, or (2) if the host is marketed so that end users do not have straightforward commonly used methods for access to remove the module so that the FCC ID of the module is visible; then an additional permanent label referring to the enclosed module: "Contains Transmitter Module FCC ID: XMR2023SG560DWF" or "Contains FCC ID: XMR2023SG560DWF" must be used. The host OEM user manual must also contain clear instructions on how end users can find and/or access the module

and the FCC ID.

The final host / module combination may also need to be evaluated against the FCC Part 15B criteria for unintentional radiators in order to be properly authorized for operation as a Part 15 digital device.

The user's manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.

To ensure compliance with all non-transmitter functions the host manufacturer is responsible for ensuring compliance with the module(s) installed and fully operational. For example, if a host was previously authorized as an unintentional radiator under the Supplier's Declaration of Conformity procedure without a transmitter certified module and a module is added, the host manufacturer is responsible for ensuring that after the module is installed and operational the host continues to be compliant with the Part 15B unintentional radiator requirements.

Manual Information To the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module. The end user manual shall include all required regulatory information/warning as shown in this manual.

5.925-7.125 GHz Radio Transmitters

- General

- Refer to KDB publication 987594 D01, Operation of these devices in the 5.925-7.125 GHz band is prohibited on oil platforms, cars, trains, boats, and aircraft, except that operation of this device is permitted in large aircraft while flying above 10,000 feet.
- 1. Operation of these devices in the 5.925-7.125 GHz band is prohibited for control of or communications with unmanned aircraft systems.
- 2. Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- 3. In the 5.925-7.125 GHz band, devices containing client device must operate under the control of a device containing the SG560D-WF which is an indoor access point. In all cases, an exception exists for transmitting brief messages to an access point when attempting to join its network after detecting a signal that confirms that an access point is operating on a particular channel. Access points may connect to other access points. Client devices are prohibited from connecting directly to another client device.

IC Statement

IRSS-GEN

"This device complies with Industry Canada's licence-exempt RSSs. Operation is subject to the following

two conditions: (1) This device may not cause interference; and (2) This device must accept any interference, including interference that may cause undesired operation of the device." or "Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

1) l'appareil ne doit pas produire de brouillage; 2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement."

Déclaration sur l'exposition aux rayonnements RF

L'autre utilisé pour l'émetteur doit être installé pour fournir une distance de séparation d'au moins 20 cm de toutes les personnes et ne doit pas être colocalisé ou fonctionner conjointement avec une autre antenne ou un autre émetteur.

The host product shall be properly labeled to identify the modules within the host product.

The Innovation, Science and Economic Development Canada certification label of a module shall be clearly visible at all times when installed in the host product; otherwise, the host product must be labeled to display the Innovation, Science and Economic Development Canada certification number for the module, preceded by the word "Contains" or similar wording expressing the same meaning, as follows: "Contains IC: 10224A-23SG560DWF" or "where: 10224A-23SG560DWF is the module's certification number".

Le produit hôte doit être correctement étiqueté pour identifier les modules dans le produit hôte.

L'étiquette de certification d'Innovation, Sciences et Développement économique Canada d'un module doit être clairement visible en tout temps lorsqu'il est installé dans le produit hôte; sinon, le produit hôte doit porter une étiquette indiquant le numéro de certification d'Innovation, Sciences et Développement économique Canada pour le module, précédé du mot «Contient» ou d'un libellé semblable exprimant la même signification, comme suit:

"Contient IC: 10224A-23SG560DWF" ou "où 10224A-23SG560DWF est le numéro de certification du module".

i. the device for operation in the band 5150–5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;

ii. for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall be such that the equipment still complies with the e.i.r.p. limit;

iii. for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the e.i.r.p. limits as appropriate;

iv. Omnidirectional antenna is recommended

This device complies with RSS-248 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Ce dispositif est conforme à la norme CNR -248 d'Industrie Canada applicable aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Caution:

Operation shall be limited to indoor use only;

Operation on oil platforms, cars, trains, boats and aircraft shall be prohibited except for on large aircraft

flying above 10,000 ft.

Avertissement:

Utilisation limitée à l'intérieur seulement;

Utilisation interdite à bord de plateformes de forage pétrolier, de voitures, de trains, de bateaux et d'aéronefs, sauf à bord d'un gros aéronef volant à plus de 10 000 pieds d'altitude

Enclosure Requirements: Host devices containing the SG560D-WF module and operating in the 5.925-7.125 GHz is prohibited from having a weatherized enclosure.

Usage Requirements:

- Host devices containing the SG560D-WF module and operating in the 5.925-7.125 GHz must be powered by wired connection such as AC adapter (battery use is not allowed).
- SG560D-WF do not have a battery backup.
- If host devices containing SG560D-WF module are designed to have a battery backup, the use of the backup battery should only be allowed during power outages and for indoor use.
- Host devices containing SG560D-WF are prohibited from direct connection to the internet.

1.1. Special Mark

Table 1: Special Marks

Mark	Definition
*	Unless otherwise specified, when an asterisk (*) is used after a function, feature, interface, pin name, AT command, or argument, it indicates that the function, feature, interface, pin, AT command, or argument is under development and currently not supported; and the asterisk (*) after a model indicates that the sample of such model is currently unavailable.
[...]	Brackets ([...]) used after a pin enclosing a range of numbers indicate all pins of the same type. For example, SDIO_DATA[0:3] refers to all four SDIO pins: SDIO_DATA0, SDIO_DATA1, SDIO_DATA2, and SDIO_DATA3.

2 Product Overview

SG560D is a series of smart 5G modules based on Android operating system, and provides industrial grade performance. It supports up to 4K video encoding/decoding, DMIC, built-in high performance Adreno™ 643 GPU, abundant GPIO interfaces as well as external audio codec. With these, the module is engineered to meet the demanding requirements in M2M applications, such as smart gateway, CPE, MiFi, MID, PND, POS, router, multimedia terminal, smart phone, digital signage, industrial PDA. Related information and details are listed in the table below:

Table 2: Brief Introduction of the Module

SG560D Series	
Packaging	LGA
Pin Number	636
Dimensions	(42.5 ±0.2) mm × (56.5 ±0.2) mm × (2.95 ±0.2) mm
Weight	Approx. 17.5 g
Wireless Network Functions ¹	5G NR, LTE-FDD, LTE-TDD, DC-HSDPA, HSPA+, HSDPA, HSUPA, WCDMA, GSM, EDGE
Variants	SG560D-CN, SG560D-EU, SG560D-WF

2.1. Frequency Bands and Functions

2.2. Key Features

Table 4: Key Features

Parameter	Details
Application Processor	Customized octa-core 64-bit ARMv8-compliant Kryo 670 CPU with 2 MB L3 cache 1 × Kryo Gold Plus (high performance) core @ 2.7 GHz with 256 KB L2 cache 3 × Kryo Gold (high performance) cores @ 2.4 GHz with 256 KB L2 cache 4 × Kryo Silver (low power) cores @ 1.9 GHz with 128 KB L2 cache
Modem system	5G NR: 3GPP Rel-15 - LTE: 3GPP Rel-15
GPU	Adreno™ 643, up to 812 MHz
Memory	4 GB LPDDR4X + 64 GB UFS (default) SG560D-CN 6 GB LPDDR4X + 128 GB UFS (Optional) 8 GB LPDDR4X + 128 GB UFS (Optional) 8 GB LPDDR4X + 256 GB UFS (Optional) SG560D-WF 6 GB LPDDR4X + 128 GB UFS(Optional) 8 GB LPDDR4X + 128 GB UFS(Optional)

Operating System	Android 12
Power Supply	● Supply voltage: 3.55–4.4 V ● Typical supply voltage: 4.0 V
SMS	● Text and PDU mode ● Point-to-point MO and MT ● SMS cell broadcast ● SMS storage: ME by default
LCM Interface	● Supports one group of 4-lane MIPI_DSI, up to 2.5 Gbps/lane ● FHD + (1200 × 2520) @ 144 fps based on MIPI standard ● Supports Wi-Fi miracast 4K @ 60 fps
Camera Interfaces	● Supports four groups of 4-lane MIPI_CSI, up to 2.5 Gbps/lane ● Supports up to 4 cameras ● 3 × ISP: up to 3 × 27 MP @ 24 fps or 3 × 22 MP @ 30 fps; 36 MP + 27 MP @ 24 fps or 36 MP + 22 MP @ 30 fps; 36 MP @ 30 fps
Video Codec ²	● Video decode: up to 4K @ 60 fps for H.264/H.265/VP9 ● Video encode: up to 4K @ 30 fps for H.264/H.265 ● Video decode and encode: 1080P @ 60 fps decode + 1080P @ 60 fps encode or 4K @ 30 fps decode + 1080P @ 30 fps encode
Audio Codec ²	● EVRC, EVRC-B, EVRC-WB, G.711, G.729, PCM, EVS ● GSM-FR, GSM-EFR, GSM-HR ● AMR-NB, AMR-WB, QCELP
Audio Interfaces ³	Three digital microphone inputs
(U)SIM Interfaces	● Two (U)SIM interfaces ● Supports 1.8/2.95 V (U)SIM card ● Supports Dual SIM Dual Standby by default
ADC Interfaces	● Four general-purpose ADC interfaces ● Supports up to 15-bit resolution
Real Time Clock	Supported
USB Interfaces	Supports two USB interfaces: USB0 and USB1 USB0 function: ● Compliant with USB 3.1 Gen 1 and USB 2.0 specifications, with transmission rates up to 5 Gbps on USB 3.1 and 480 Mbps on USB 2.0 ● Supports USB OTG ● Used for AT command communication, data transmission, software debugging, firmware upgrade and voice over USB USB1 function: ● Compliant with USB 2.0 specifications, with transmission rate up to

² Audio codec and video codec listed in this table are dedicated for codec inside the CPU.

³ An external codec should be added via I2S interface when audio output function is needed.

	480 Mbps
	● Only support host mode (external VBUS power supply is needed)
DisplayPort Interface	● Supports DisplayPort 1.4 function through USB0_SS1 and USB0_SS2 ● Supports up to 4K (3840 × 2160) @ 60 fps ● USB 3.1 and DisplayPort 1.4 can work concurrently
PCIe Interface	Supports 2-lane PCIe Gen 3, up to 8 Gbps
SD Card Interface	● Supports SD 3.0 protocol ● Supports 1.8/2.95 V SD card ● Supports SD card hot-swap
UART Interfaces ⁴	Supports up to eleven groups of UART interfaces, two of them are default configurations and nine of them can be multiplexed from other interfaces ● Default UART interfaces: UART and DBG_UART – UART: 4-wire UART interface, supports RTS and CTS hardware flow control, up to 4 Mbps – DBG_UART: 2-wire UART interface, dedicated for debugging ● For details about nine UART interfaces that can be multiplexed from other interfaces, see Table 23
SPI Interfaces ⁴	Supports up to ten groups of SPI interfaces, one of them is default configuration and nine of them can be multiplexed from other interfaces ● The default SPI supports master mode only ● For details about nine SPI interfaces that can be multiplexed from other interfaces, see Table 23
I2C Interfaces ⁴	Supports up to sixteen groups of I2C interfaces ● Five of them are dedicated I2C interfaces used for camera and sensor peripherals ● Three of them are generic I2C interfaces that can be used for TP and NFC peripherals ● For details about eight I2C interfaces that can be multiplexed from other interfaces, see Table 23
I2S Interfaces	Supports up to five groups of I2S interfaces ● Two I2S interfaces are default configurations ● For details about three I2S interfaces that can be multiplexed from other interfaces, see Table 24
Bluetooth Features	● Supports <i>Bluetooth Core Specification Version 5.2</i> ● Supports Bluetooth Classic & BLE
GNSS Features	GPS/GLONASS/BDS/Galileo/NavIC/SBAS/QZSS, L1 + L5
Antenna Interface	● ANT0, ANT1, ANT2, ANT3 ● ANT_GNSS

⁴ For details about the multiplexing and conflict relationships of UART, I2C and SPI interfaces, see **Table 23**.

	● ANT_WIFI/BT, ANT_WIFI_MIMO(SG560D-WF)
Transmitting Power	● Class 4 (33 dBm ± 2 dB) for EGSM900 ● Class 1 (30 dBm ± 2 dB) for DCS1800 ● Class E2 (27 dBm ± 3 dB) for EGSM900 8-PSK ● Class E2 (26 dBm ± 3 dB) for DCS1800 8-PSK ● WCDMA bands: Class 3 (23 dBm ± 2 dB) ● LTE HPUE⁵ band (B41): Class 2 (26 dBm ± 2 dB) ● Other LTE bands: Class 3 (23 dBm ± 2 dB) ● 5G NR HPUE⁵ bands (n41/n77/n78/n79): Class 2 (26 dBm +2/-3 dB) ● Other 5G NR bands: Class 3 (23 dBm ± 2 dB)
5G NR Features	● Supports 3GPP Rel-15 FDD and TDD ● Supported modulation types: – Uplink: $\pi/2$-BPSK, QPSK, 16QAM, 64QAM and 256QAM – Downlink: QPSK, 16QAM, 64QAM and 256QAM ● Supports Multi-User MIMO – Uplink: 2 $\times$ 2 MIMO⁶: - SG560D-CN: n41/n78/n79 - SG560D-EU: n41/n77/n78 – Downlink: 4 $\times$ 4 MIMO: - SG560D-CN: n1/n41/n78/n79 - SG560D-EU: n1/n3/n7/n38/n40/n41/n77/n78 ● Supports SCS 15 kHz and 30 kHz⁷ ● Supports SA and NSA operation modes ● Supports Option 3x, Option 3a, Option 3 and Option 2 ● Maximum transmission rate: – NSA: 2.5 Gbps (DL)/ 550 Mbps (UL) – SA: 2.1 Gbps (DL)/ 900 Mbps (UL)
LTE Features	● Support 3GPP Rel-15 FDD and TDD ● Supports 1.4/3/5/10/15/20 MHz RF bandwidth ● Supports Multi-User MIMO – Downlink: 4 $\times$ 4 MIMO: - SG560D-CN: B1/B41 - SG560D-EU: B1/B3/B7/B38/B40/B41/B42 ● Supports modulation types: – Uplink QPSK, 16QAM, 64QAM and 256QAM – Downlink QPSK, 16QAM, 64QAM and 256QAM ● Maximum transmission rate: 1.2 Gbps (DL)/ 200 Mbps (UL)
UMTS Features	● Supports 3GPP Rel-9 ● Supports QPSK, 16QAM and 64QAM modulation

⁵ HPUE only supports single carrier.

⁶ Uplink 2 $\times$ 2 MIMO is supported only in 5G TDD SA mode.

⁷ 5G NR FDD bands only support 15 kHz SCS. 5G NR TDD bands only support 30 kHz SCS.

	● DC-HSDPA: Max. 42 Mbps (DL) ● HSUPA: Max. 5.76 Mbps (UL) ● WCDMA: Max. 384 kbps (DL)/ 384 kbps (UL)
GSM Features ⁸	● Class 4 (33 dBm $\pm$2 dB) for EGSM 900 ● Class 1 (30 dBm $\pm$2 dB) for DCS1800 ● Class E2 (27 dBm $\pm$3 dB) for EGSM900 8 -PSK ● Class E2 (26 dBm $\pm$3 dB) for DCS1800 8 -PSK ● EDGE: Max. 296 kbps (DL)/ 236.8 kbps (UL) ● GPRS: Max. 107 kbps (DL)/ 85.6 kbps (UL)
WLAN Features (SG560D-WF)	● Supports Wi-Fi 6E ● Supports AP and STA modes ● 2.4GHz; 5 GHz; 6 GHz, supports 802.11a/b/g/n/ac/ax, up to 3.6 Gbps
Temperature Range	● Operating Temperature Range ⁹: -35 ℃ to +75 ℃ ● Storage Temperature Range: -40 ℃ to +90 ℃
Firmware Upgrade	Upgrade via USB or OTA
RoHS	All hardware components are fully compliant with EU RoHS directive

2.3. Functional Diagram

The main functional components of the module diagram are explained below

- Power Management
- Battery Charge and Management
- Radio Frequency
- Baseband
- Memory (LPDDR4X + UFS flash)
- Peripheral Interface
 - USB Interfaces
 - (U)SIM Interfaces
 - SD Card Interface
 - GPIO Interfaces
 - UART Interfaces
 - I2C Interfaces
 - SPI Interface
 - I2S Interfaces
 - ADC Interfaces
 - LCM (MIPI) Interface

⁸ GSM/EDGE bands are supported only on SG560D-EU.

⁹ Within operating temperature range, the module is 3GPP compliant.

- Touch Panel Interface
- Camera (MIPI) Interfaces
- Sensor Interfaces
- Emergency Download Interface
- PCIe Interface
- NFC Interface*

NOTE

For SG560D-EU, the I/O directions of ANT1 and ANT2 are analog input/output. For SG560D-CN, the I/O directions of ANT1 and ANT2 are analog input.

2.4. Pin Assignment

The following figure illustrates the pin assignment of the module.

Figure 1: Pin Assignment

NOTE

Keep all RESERVED pins unconnected.

2.5. Pin Description

The following table shows the DC characteristics and pin descriptions.

Table 5: I/O Parameters Definition

Type	Description
AI	Analog Input
AIO	Analog Input/Output
AO	Analog Output
DI	Digital Input
DIO	Digital Input/Output
DO	Digital Output
OD	Open Drain
PI	Power Input
PIO	Power Input/Output
PO	Power Output

Table 6: Pin Description

Power Supply					
Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
VBAT	1–5	PIO	Power supply for the module	Vmin = 3.55 V Vnom = 4.0 V Vmax = 4.4 V	It must be able to provide sufficient current up to 5.0 A. It is suggested to add a TVS diode for surge protection.
VPH_PWR	420, 421, 424	PO	Power supply for peripherals	Vnom = VBAT Iomax = 1500 mA	Keep on. 1.5 A in total.

LDO7C_3V0	412	PO	3.0 V output (3.0 V output for sensors and TP)	Vnom = 3.0 V Iomax = 600 mA	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO13C_2V8	409	PO	2.8 V output (2.8 V output for LCM)	Vnom = 2.8 V Iomax = 150 mA	When using it, it is recommended to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.
LDO18B_1V8	336	PO	1.8 V output (1.8 V output for I/O pull-up)	Vnom = 1.8 V Iomax = 20 mA	Keep on. When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 14.1 μ F.
LDO17B_1V8	408	PO	1.8 V output (1.8 V output for I/O power supply)	Vnom = 1.8 V Iomax = 600 mA	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO12C_1V8	109	PO	1.8 V output (1.8 V output for I/O power supply of LCM)	Vnom = 1.8 V Iomax = 150 mA	When using it, it is recommended to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.
LDO8C_1V8	112	PO	1.8 V output (1.8 V output for sensors)	Vnom = 1.8 V Iomax = 150 mA	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO3C_3V0	624	PO	3.0 V output (reserved power)	Vnom = 3.0 V Iomax = 150 mA	When using them, it is recommended

LDO2C_1V8	626	PO	1.8 V output (reserved power)	Vnom = 1.8 V Iomax = 150 mA	to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.
VRTC	312	PIO	Power supply for RTC	Vmin = 2.0 V Vnom = 3.0 V Vmax = 3.25 V	
GND	6, 8–10, 12, 13, 22, 23, 32, 34, 35, 37, 39, 46, 47, 56–58, 76–78, 81–85, 87–91, 93, 96, 97, 100, 101, 105, 108, 114, 115, 118, 125, 127, 129, 132, 143, 146, 171, 179, 182, 204–206, 208, 209, 212–218, 221, 224, 225, 228–230, 233–237, 239–241, 243, 245, 246, 248–250, 252, 253, 255, 257, 260, 261, 264–266, 269–273, 275–277, 279, 281, 282, 284, 285, 288–290, 293, 295–297, 299–301, 303, 304, 313, 316, 334, 335, 344, 350, 359, 361–364, 367, 371, 379, 381, 382, 387, 394, 404–406, 411, 413, 414, 416, 417, 425–428, 433–580, 592, 595, 604, 623				

Battery Detection

Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
BAT_P	418	AI	Battery voltage detect (+)		Must be connected.
BAT_M	419	AI	Battery voltage detect (-)		
BAT_THERM	407	AI	Battery temperature detect		Internally pulled up. Supports 100 k Ω NTC thermistor by default. Connect it to 100 k Ω NTC thermistor. If not used, connect it to GND with a 100 k Ω resistor.
BAT_ID	410	AI	Battery ID detect		If not used, keep it unconnected.

Turn On/Off

Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
PWRKEY	332	DI	Turn on/off the module	1.8 V	
VOL_DOWN	333	DI	Volume down		
VOL_UP	329	DI	Volume up		

USB Interfaces					
Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
USB_VBUS	429–432	PIO	USB/charger insertion detection; Charging power input; Power output for OTG device	Vmax = 12.6 V Vmin = 3.7 V Vnom = 5.0 V	The maximum output current in OTG mode is 1.5 A.
USB0_DP	354	AIO	USB0 2.0 differential data (+)		Requires differential impedance of 90 Ω. Complies with USB 2.0 specification. Supports OTG.
USB0_DM	358	AIO	USB0 2.0 differential data (-)		
USB0_SS1_TX_P	360	AO	USB 3.1 channel 1 SuperSpeed transmit (+)		Requires differential impedance of 90 Ω. Complies with USB 3.1 Gen 1 specification.
USB0_SS1_TX_M	357	AO	USB 3.1 channel 1 SuperSpeed transmit (-)		
USB0_SS1_RX_P	356	AI	USB 3.1 channel 1 SuperSpeed receive (+)		
USB0_SS1_RX_M	353	AI	USB 3.1 channel 1 SuperSpeed receive (-)		
USB0_SS2_TX_P	348	AO	USB 3.1 channel 2 SuperSpeed transmit (+)		
USB0_SS2_TX_M	345	AO	USB 3.1 channel 2 SuperSpeed transmit (-)		
USB0_SS2_RX_P	352	AI	USB 3.1 channel 2 SuperSpeed receive (+)		
USB0_SS2_RX_M	349	AI	USB 3.1 channel 2 SuperSpeed receive (-)		
USB_VCONN	375	PI	Power supply for E-Mark cables	Vmax = 4.5 V Vmin = 3.0 V	Externally connected to VPH_PWR or

				dedicated boost converter.
USB0_CC1	339	AI	USB Type-C detect 1	When Micro-USB mode is used, this pin can be used as USB_ID.
USB0_CC2	342	AI	USB Type-C detect 2	
USB_PHY_PS	338	DI	CC status detection	When USB Type-C mode is used, connect it to SS_DIR_OUT. When Micro-USB mode is used, this pin should be connected to the ground through a 1 kΩ resistor.
SS_DIR_OUT	341	DO	CC status output	
USB_OPTION	337	AI	Initial configuration for mode selection when powering up USB	When USB Type-C mode is used, keep it unconnected. When Micro-USB mode is used, it should be connected to ground.
USB1_DP	622	AIO	USB1 2.0 differential data (+)	Requires differential impedance of 90 Ω. Complies with USB 2.0 specification. Only supports host mode.
USB1_DM	621	AIO	USB1 2.0 differential data (-)	
USB0_DP_AUX_P	620	AIO	Displayport auxiliary channel (+)	
USB0_DP_AUX_M	619	AIO	Displayport auxiliary channel (-)	

PCIe Interface

Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
PCIE1_REFCLK_P	594	AIO	PCle1 reference clock (+)		
PCIE1_REFCLK_M	593	AIO	PCle1 reference clock (-)		
PCIE1_RX0_P	597	AI	PCle1 recive 0 (+)		
PCIE1_RX0_M	596	AI	PCle1 recive 0 (-)		
PCIE1_RX1_P	599	AI	PCle1 recive 1 (+)		Requires differential impedance of 85 Ω.
PCIE1_RX1_M	598	AI	PCle1 recive 1 (-)		
PCIE1_TX0_P	601	AO	PCle1 transmit 0 (+)		
PCIE1_TX0_M	600	AO	PCle1 transmit 0 (-)		
PCIE1_TX1_P	603	AO	PCle1 transmit 1 (+)		
PCIE1_TX1_M	602	AO	PCle1 transmit 1 (-)		
PCIE1_RST_N	605	DO	PCle1 reset		
PCIE1_CLKREQ_N	606	DI	PCle1 clock request	1.8 V	
PCIE1_WAKE_N	607	DI	PCle1 wake up		

LCM Interface

Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
DSI_CLK_P	366	AO	LCD MIPI clock (+)		
DSI_CLK_N	370	AO	LCD MIPI clock (-)		
DSI_LN0_P	380	AO	LCD MIPI lane 0 data (+)		Requires differential impedance of 85 Ω.
DSI_LN0_N	377	AO	LCD MIPI lane 0 data (-)		
DSI_LN1_P	376	AO	LCD MIPI lane 1 data (+)		
DSI_LN1_N	373	AO	LCD MIPI lane 1 data (-)		
DSI_LN2_P	372	AO	LCD MIPI lane 2 data (+)		

DSI_LN2_N	369	AO	LCD MIPI lane 2 data (-)	1.8 V	External pull-up is not required.
DSI_LN3_P	368	AO	LCD MIPI lane 3 data (+)		
DSI_LN3_N	365	AO	LCD MIPI lane 3 data (-)		
LCD_TE	374	DI	LCD tearing effect		
LCD_RST	378	DO	LCD reset		

Camera Interfaces

Pin Name	Pin No.	I/O	Description	DC Characteristics	Comment
CSI0_CLK_P	14	AI	MIPI CSI0 clock (+)	1.8 V	Requires differential impedance of 85 Ω.
CSI0_CLK_N	18	AI	MIPI CSI0 clock (-)		
CSI0_LN0_P	16	AI	MIPI CSI0 lane 0 data (+)		
CSI0_LN0_N	17	AI	MIPI CSI0 lane 0 data (-)		
CSI0_LN1_P	20	AI	MIPI CSI0 lane 1 data (+)		
CSI0_LN1_N	21	AI	MIPI CSI0 lane 1 data (-)		
CSI0_LN2_P	24	AI	MIPI CSI0 lane 2 data (+)		
CSI0_LN2_N	25	AI	MIPI CSI0 lane 2 data (-)		
CSI0_LN3_P	28	AI	MIPI CSI0 lane 3 data (+)		
CSI0_LN3_N	29	AI	MIPI CSI0 lane 3 data (-)		
CAM0_MCLK	30	DO	Master clock of camera 0		
CAM0_RST	26	DO	Reset of camera 0		
CSI1_CLK_P	38	AI	MIPI CSI1 clock (+)		
CSI1_CLK_N	42	AI	MIPI CSI1 clock (-)		
CSI1_LN0_P	40	AI	MIPI CSI1 lane 0 data (+)		Requires differential impedance of 85 Ω.

CSI1_LN0_N	41	AI	MIPI CSI1 lane 0 data (-)	
CSI1_LN1_P	44	AI	MIPI CSI1 lane 1 data (+)	
CSI1_LN1_N	45	AI	MIPI CSI1 lane 1 data (-)	
CSI1_LN2_P	48	AI	MIPI CSI1 lane 2 data (+)	
CSI1_LN2_N	49	AI	MIPI CSI1 lane 2 data (-)	
CSI1_LN3_P	52	AI	MIPI CSI1 lane 3 data (+)	
CSI1_LN3_N	53	AI	MIPI CSI1 lane 3 data (-)	
CAM1_MCLK	54	DO	Master clock of camera 1	1.8 V
CAM1_RST	50	DO	Reset of camera 1	
CSI2_CLK_P	390	AI	MIPI CSI2 clock (+)	
CSI2_CLK_N	386	AI	MIPI CSI2 clock (-)	
CSI2_LN0_P	392	AI	MIPI CSI2 lane 0 data (+)	
CSI2_LN0_N	389	AI	MIPI CSI2 lane 0 data (-)	
CSI2_LN1_P	388	AI	MIPI CSI2 lane 1 data (+)	Requires differential impedance of 85 Ω.
CSI2_LN1_N	385	AI	MIPI CSI2 lane 1 data (-)	
CSI2_LN2_P	396	AI	MIPI CSI2 lane 2 data (+)

2.6. EVB Kit

To help you develop applications with the module, Quectel supplies an evaluation board with accessories to control or test the module. For more details, see **document [1]**.

3 Operating Characteristics

3.1. Power Supply

3.1.1. Power Supply Pins

SG560D series module provides five VBAT pins, which are dedicated for connection to external power supply. The power supply range of the module is 3.55–4.4 V, and the recommended value is 4.0 V. VPH_PWR is used for powering peripherals.

Table 7: VBAT Pins

Pin Name	Pin No.	I/O	Description	Min.	Typ.	Max.	Unit
VBAT	1–5	PIO	Power supply for the module	3.55	4.0	4.4	V

3.1.2. Battery Charge and Management

SG560D series module supports fully programmable switch-mode Li-ion battery charging. It can charge single-cell Li-ion and Li-polymer batteries. The switch-mode charging supports Quick Charge 2.0, 3.0 and 4.0, and the maximum charging current is 3.0 A. The battery charger of the module supports trickle charging, pre-charge, constant current charging and constant voltage charging modes.

- **Trickle charging:** when the battery voltage is below 2.1 V, a 75 mA trickle charging current is applied to the battery.
- **Pre-charge:** when the battery voltage is between 2.1 V and the pre-charge cut-off voltage (software programmable range: 2.7–3.4 V, default value: 3.0 V), the system enters pre-charge mode. The charging current is programmable between 100–450 mA, 300 mA by default.
- **Constant current mode (CC mode):** when the battery voltage increases between the pre-charge cut-off voltage and constant current charging cut-off voltage (software programmable range: 3.6–4.4 V, default value: 4.4 V), the system switches to CC mode. The charging current is programmable between 50–3000 mA. The default charging current is 500 mA for USB charging and 3 A for adapter.
- **Constant voltage mode (CV mode):** when the battery voltage reaches the final value 4.4 V, the system switches to CV mode and the charging current decreases gradually. When the charging current reduces to about 100 mA, charging is completed.

Table 8: Pin Definition of Charging Interface

Pin Name	Pin No.	I/O	Description	Comment
USB_VBUS	429–432	PIO	USB/charger insertion detection; charging power input; Power output for OTG device	The maximum output current in OTG mode is 1.5 A.
VBAT	1–5	PIO	Power supply for the module	It must be able to provide sufficient current up to 5.0 A. It is suggested to use a TVS diode for surge protection.
BAT_P	418	AI	Battery voltage detect (+)	Must be connected.
BAT_M	419	AI	Battery voltage detect (-)	
BAT_THERM	407	AI	Battery temperature detect	Internally pulled up. Supports 100 k Ω NTC thermistor by default. Connect it to 100 k Ω NTC thermistor. If unused, connect it to GND with a 100 k Ω resistor.
BAT_ID	410	AI	Battery ID detect	If not used, keep it unconnected.

SG560D series module supports battery temperature detection in the condition that the battery integrates a thermistor (100 k Ω $\pm$ 1 % NTC thermistor with a B-constant of 4250 k Ω $\pm$ 1 % by default) and the thermistor is connected to BAT_THERM. If BAT_THERM is not connected, there will be malfunctions such as battery charging failure, battery level display error.

A reference design for the battery charging circuit is shown below.

Figure 2: Reference Circuit for Battery Charging Circuit

Mobile devices such as mobile phones and handheld POS systems are powered by batteries. For different batteries, the charging and discharging curves must be modified correspondingly to achieve the best performance.

If the thermistor is not available in the battery, or the adapter is utilized for powering the module, then you must connect BAT_THERM to GND via a 100 kΩ resistor. Otherwise, the system may mistakenly judge that the battery temperature is abnormal, which will cause battery charging failure. BAT_P and BAT_M pins must be connected. Otherwise, the module will have abnormalities in voltage detection, as well as related turn-on/off and battery charging or discharging issues.

3.1.3. Reference Design for Power Supply

The performance of the module largely depends on the power source. The power supply of the module should be able to provide sufficient current of 5 A at least. If the voltage difference between input and output is not too large, it is suggested that an LDO should be used for the module. If there is a large voltage difference between the input source and the desired output (VBAT), a buck converter is preferred to be used as the power supply.

The following figure illustrates a reference design for +5 V input power source.

Figure 3: Reference Circuit of Power Supply

3.1.4. Requirements for Voltage Stability

The recommended power supply value of the module is 4 V. The power supply performance, such as load capacity, voltage ripple, directly influences the module's performance and stability. Under ultimate conditions, the module may have a transient peak current of up to 5 A. If the power supply capability is not sufficient, there will be voltage drops, and if the voltage drops below 3.2 V, the module will be turned off automatically. Therefore, make sure the input voltage never drops below 3.2 V.

Figure 4: Power Supply Limits During Burst Transmission

To prevent the voltage from dropping below 3.2 V, it is recommended to connect a tantalum capacitor of about 100 µF with low ESR ($ESR \leq 0.7 \Omega$) and reserve a multi-layer ceramic chip capacitor (MLCC) array due to its ultra-low ESR. It is recommended to use three ceramic capacitors (100 nF, 33 pF, 10 pF) to compose the MLCC array, and place these capacitors close to VBAT pins. Additionally, add a 4.7 µF capacitor in parallel. The width of VBAT trace should be no less than 5 mm. In principle, the longer the VBAT trace is, the wider it should be.

In addition, in order to get a stable power source, it is suggested to use a TVS diode and place it as close to the VBAT pins as possible to enhance surge protection. The following figure shows the structure of the power supply.

Figure 5: Structure of Power Supply

3.2. Turn On

Table 9: Pin Definition of PWRKEY

Pin Name	Pin No.	I/O	Description
PWRKEY	332	DI	Turn on/off the module

The module can be turned on by driving the PWRKEY pin low for at least 1.6 s. PWRKEY is pulled up to 1.8 V internally.

It is recommended to use an open drain/collector driver to control PWRKEY. A simple reference circuit is illustrated in the following figure.

Figure 6: Turn On the Module Using Driving Circuit

Another way to control the PWRKEY pin is to use a button directly. When you press the button, electrostatic strike may be generated from finger. Therefore, you must place a TVS component nearby the button for ESD protection. Additionally, a 1 k Ω resistor is connected in series to PWRKEY for ESD protection. A reference circuit is shown in the following figure.

Figure 7: Turn On the Module Using Button

The timing of turning on the module is illustrated in the following figure.

Figure 8: Turn-on Timing

NOTE

1. When the module is turned on for the first time, its turn-on timing may be different from that shown above.
2. Make sure that VBAT is stable before pulling down the PWRKEY pin. It is recommended to drive PWRKEY low after VBAT reaches 4.0 V and remains stable for 30 ms. PWRKEY pin cannot be pulled down all the time.

3.3. Turn Off/Restart

The module can be turned off by driving the PWRKEY pin low for at least 3 s. If the PWRKEY pin is pulled low for at least 3 s, you can choose to turn off the module in the prompt window popped up.

It is also possible to restart the module by driving the PWRKEY pin low for at least 8 s. If the PWRKEY pin is pulled low for at least 8 s, the module will execute a forced shut-down and then restart. The restart timing is illustrated in the following figure.

Figure 9: Restart Timing

3.4. VRTC

The RTC (Real Time Clock) can be powered by an external power source when the module is powered down and there is no power supply for the VBAT. The external power source can be a capacitor according to application demands.

The following are reference circuit designs when an external battery is utilized for powering RTC.

Figure 10: RTC Powered by a Rechargeable Cell Battery

Figure 11: RTC Powered by Capacitor

- If RTC fails, the module can synchronize time through the network after being powering up.
- The recommended input voltage range for VRTC is 2.0–3.25 V and the recommended typical value is 3.0 V. The average power consumption is 30 μ A when VBAT is disconnected.
- When powered by VBAT, the RTC error is 50 ppm. When powered by VRTC, the RTC error is 500 ppm.
- If a rechargeable battery is used, ESR of the battery should be less than 2 k Ω .

3.5. Power Output

The module supports output of regulated voltages for peripheral circuits. During application, it is recommended to connect a 30 pF and a 10 pF capacitor in parallel to suppress high-frequency noise.

Table 10: Pin Definition of Power Supply Interface

Pin Name	Pin No.	I/O	Description	Comment
VPH_PWR	420, 421, 424	PO	Power supply for peripherals	Keep on. 1.5 A in total.
LDO7C_3V0	412	PO	3.0 V output (3.0 V output for sensors and TP)	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO13C_2V8	409	PO	2.8 V output (2.8 V output for LCM)	When using it, it is recommended to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.

LDO18B_1V8	336	PO	1.8 V output (1.8 V output for I/O pull-up)	Keep on. When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 14.1 μ F.
LDO17B_1V8	408	PO	1.8 V output (1.8 V output for I/O power supply)	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO12C_1V8	109	PO	1.8 V output (1.8 V output for I/O power supply of LCM)	When using it, it is recommended to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.
LDO8C_1V8	112	PO	1.8 V output (1.8 V output for sensors)	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
LDO3C_3V0	624	PO	3.0 V output (reserved power)	When using them, it is recommended to add 1–4 μ F bypass capacitors with a total capacitance not exceeding 4 μ F.
LDO2C_1V8	626	PO	1.8 V output (reserved power)	
VRTC	312	PIO	Power supply for RTC	
USIM1_VDD	160	PO	(U)SIM1 card power supply	Either 1.8 V or 2.95 V (U)SIM card is supported and can be identified automatically by the module. When using them, it is recommended to add bypass capacitors with a total capacitance not
USIM2_VDD	172	PO	(U)SIM2 card power supply	

				exceeding 3 μ F.
SD_LDO9C	176	PO	Power supply for SD card	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
SD_LDO6C	173	PO	SD card pull-up power supply	Only for SD card pull-up. When using it, it is recommended to add 1–3 μ F bypass capacitors with a total capacitance not exceeding 3 μ F.
VREG_L1P_1P0 5	116	PO	DVDD for cameras 1 and 2	When using them, it is recommended to add bypass capacitors with a total capacitance not exceeding 45.3 μ F.
VREG_L2P_1P1	121	PO	DVDD for cameras 0 and 3	
VREG_L3P_2P8	113	PO	AVDD for cameras 1 and 3	
VREG_L4P_2P9	124	PO	AVDD for cameras 0	When using them, it is recommended to add bypass capacitors with a total capacitance not exceeding 19 μ F.
VREG_L5P_2P8	128	PO	AFVDD for cameras 0	
VREG_L6P_1P8	117	PO	DOVDD for cameras 0, 1, 2 and 3	
VREG_L7P_2P8	120	PO	AVDD for camera 2	

4 Application Interfaces

4.1. USB Interfaces

SG560D series module provides two USB interfaces: USB0 and USB1. USB0 complies with USB 3.1 Gen1 and USB 2.0 specifications and supports USB OTG. USB1 complies with USB 2.0 specification and only supports host mode. The module supports SuperSpeed (5 Gbps) for USB 3.1, and supports high-speed (480 Mbps), full-speed (12 Mbps) and low-speed (1.5 Mbps) for USB 2.0. USB0 can be used for AT command communication, data transmission, software debugging, firmware upgrade and voice over USB.

4.1.1. USB0 Interface

The following table shows the pin definition of USB0.

Table 11: Pin Definition of USB0

Pin Name	Pin No.	I/O	Description	Comment
USB_VBUS	429–432	PIO	USB/charger insertion detection. Charging power input. Power output for OTG device.	The maximum output current in OTG mode is 1.5 A.
USB0_DP	354	AIO	USB 2.0 differential data (+)	Requires differential impedance of 90 Ω.
USB0_DM	358	AIO	USB 2.0 differential data (-)	Complies with USB 2.0 specification. Supports OTG.
USB0_SS1_TX_P	360	AO	USB 3.1 channel 1 SuperSpeed transmit (+)	Requires differential impedance of 90 Ω. Complies with USB 3.1 Gen 1. specification.
USB0_SS1_TX_M	357	AO	USB 3.1 channel 1 SuperSpeed transmit (-)	
USB0_SS1_RX_P	356	AI	USB 3.1 channel 1 SuperSpeed receive (+)	
USB0_SS1_RX_M	353	AI	USB 3.1 channel 1 SuperSpeed receive (-)	

USB0_SS2_TX_P	348	AO	USB 3.1 channel 2 SuperSpeed transmit (+)	
USB0_SS2_TX_M	345	AO	USB 3.1 channel 2 SuperSpeed transmit (-)	
USB0_SS2_RX_P	352	AI	USB 3.1 channel 2 SuperSpeed receive (+)	
USB0_SS2_RX_M	349	AI	USB 3.1 channel 2 SuperSpeed receive (-)	
USB_VCONN	375	PI	Power supply for E-Mark cables	Externally connected to VPH_PWR or dedicated boost converter.
USB0_CC1	339	AI	USB Type-C detect 1	When Micro-USB mode is used, this pin can be used as USB_ID.
USB0_CC2	342	AI	USB Type-C detect 2	
USB_PHY_PS	338	DI	CC status detection	When USB Type-C mode is used, connect it to SS_DIR_OUT. When Micro-USB mode is used, this pin needs to be connected to ground through a 1 kΩ resistor.
SS_DIR_OUT	341	DO	CC status output	
USB_OPTION	337	AI	Initial configuration for mode selection when powering up USB	When USB Type-C mode is used, keep it unconnected. When Micro-USB mode is used, it needs to be connected to ground.
USB0_DP_AUX_P	620	AIO	Displayport auxiliary channel (+)	
USB0_DP_AUX_M	619	AIO	Displayport auxiliary channel (-)	

4.1.1.1. USB Type-C Mode

A reference circuit of USB Type-C mode of USB0 is shown below.

Figure 12: USB Type-C Reference Circuit of USB0

4.1.1.2. Micro USB Mode

USB Type-C mode is used on USB0 by default. Micro USB mode can be used via hardware configuration.

A reference circuit of Micro USB mode of USB0 is shown below.

Figure 13: Micro USB Reference Circuit of USB0

4.1.1.3. DisplayPort Mode

SG560D series module supports DisplayPort 1.4, which is implemented through USB Type-C interface and supports 4-lane interface with a resolution of 4K @ 60 fps. Pin mapping between USB Type-C interface and DisplayPort interface is defined as follows.

Table 12: USB Type-C Mode and DisplayPort Mode Pin Mapping

Phy_mode	Port Select ¹⁰		Pin Name	Type-C Receptable Pins
-	0	1	-	-
USB 3.1 only	TX	-	USB0_SS1_TX_P/M	Tx1±
	RX	-	USB0_SS1_RX_P/M	Rx1±
	-	TX	USB0_SS2_TX_P/M	Tx2±
	-	RX	USB0_SS2_RX_P/M	Rx2±
DP only	DP ML2	DP ML1	USB0_SS1_TX_P/M	Tx1±
	DP ML3	DP ML0	USB0_SS1_RX_P/M	Rx1±
	DP ML1	DP ML2	USB0_SS2_TX_P/M	Tx2±
	DP ML0	DP ML3	USB0_SS2_RX_P/M	Rx2±
Concurrent DP & USB	TX	DP ML1	USB0_SS1_TX_P/M	Tx1±
	RX	DP ML0	USB0_SS1_RX_P/M	Rx1±
	DP ML1	TX	USB0_SS2_TX_P/M	Tx2±
	DP ML0	RX	USB0_SS2_RX_P/M	Rx2±

¹⁰ Port 0 and port 1 refer to the positive and negative selection of Type-C respectively.

A reference circuit of the DisplayPort interface is given as follows.

Figure 14: DisplayPort Mode Reference Circuit

4.1.2. USB1 Interface

The following table shows the pin definition of USB1 interface.

Table 13: Pin Description of USB1 Interface

Pin Name	Pin No.	I/O	Description	Comment
USB1_DP	622	AIO	USB1 2.0 differential data (+)	Requires differential impedance of 90 Ω.
USB1_DM	621	AIO	USB1 2.0 differential data (-)	Complies with USB 2.0 specification. Only supports host mode.

4.1.3. Design Principles for USB Interfaces

Table 14: USB Trace Length Inside the Module

Pin No.	Signal	Length (mm)	Length Difference (P - M)
354	USB0_DP	35.95	0.47
358	USB0_DM	35.48	
360	USB0_SS1_TX_P	26.51	-0.14
357	USB0_SS1_TX_M	26.65	
356	USB0_SS1_RX_P	24.03	-0.10
353	USB0_SS1_RX_M	24.13	
348	USB0_SS2_TX_P	26.16	-0.14
345	USB0_SS2_TX_M	26.30	
352	USB0_SS2_RX_P	26.79	0.12
349	USB0_SS2_RX_M	26.67	
622	USB1_DP	22.95	0.41
621	USB1_DM	22.54	
620	USB0_DP_AUX_P	21.41	0.19
619	USB0_DP_AUX_M	21.22	

To ensure USB performance, follow the following principles while designing the USB interface.

- It is important to route the USB signal traces as differential pairs with total grounding. The impedance of USB differential trace is 90 Ω .
- The ground reference plane under the USB signals must be continuous without any cuts or any holes to ensure impedance continuity.
- Pay attention to the influence of junction capacitance of ESD protection components on USB data lines. Typically, the capacitance value should be less than 2 pF for USB 2.0 and less than 0.5 pF for USB 3.1. Keep the ESD protection components as close as possible to the USB connector.
- Do not route USB signal traces under crystals, oscillators, magnetic devices, audio signal, and RF signal traces. Route USB differential traces in inner-layer with ground shielding on not only upper and lower layers but also right and left sides.
- Do not route USB 3.1 signal traces under RF signal traces. Crossing or paralleling with RF signal

traces is forbidden. Isolation between USB 3.1 signals and RF signals should be more than 90 dB. Otherwise, the RF signals will be seriously affected.

- Ensure the trace length difference between TX_P and TX_M, as well as RX_P and RX_M of USB 3.1 does not exceed 0.7 mm.
- Ensure the trace length difference between USB 2.0 DP and USB 2.0 DM differential pair does not exceed 2 mm.
- For USB 3.1, the spacing between Rx and Tx signal traces should be three times the signal trace width. The spacing between USB 3.1 signal trace and other signal traces should be four times the signal trace width.
- For USB 2.0, the spacing between DP and DM signal traces should be three times the signal trace width. The spacing between USB 2.0 signal traces and other signal traces should be four times the signal trace width.

4.2. (U)SIM Interfaces

The module provides two (U)SIM interfaces which meet ETSI and IMT-2000 requirements. Dual SIM Dual Standby is supported by default. Either 1.8 V or 2.95 V (U)SIM card is supported.

Table 15: Pin Definition of (U)SIM Interfaces

Pin Name	Pin No.	I/O	Description	Comment
USIM1_VDD	160	PO	(U)SIM1 card power supply	Either 1.8 V or 2.95 V (U)SIM card is supported and can be identified automatically by the module. When using it, it is recommended to add bypass capacitors with a total capacitance not exceeding 3 μ F.
USIM1_DATA	165	DIO	(U)SIM1 card data	Pull it up to USIM1_VDD with an external 20 k Ω resistor.
USIM1_CLK	164	DO	(U)SIM1 card clock	
USIM1_RST	162	DO	(U)SIM1 card reset	

USIM1_DET	159	DI	(U)SIM1 card hot-swap detect	Active low. Pull it up to 1.8 V externally. If not used, keep it unconnected. Disabled by default, and can be enabled via software configuration.
USIM2_VDD	172	PO	(U)SIM2 card power supply	Either 1.8 V or 2.95 V (U)SIM card is supported and can be identified automatically by the module. When using it, it is recommended to add bypass capacitors with a total capacitance not exceeding 3 μ F.
USIM2_DATA	169	DIO	(U)SIM2 card data	Pull it up to USIM2_VDD with an external 20 k Ω resistor.
USIM2_CLK	168	DO	(U)SIM2 card clock	
USIM2_RST	166	DO	(U)SIM2 card reset	
USIM2_DET	163	DI	(U)SIM2 card detect	Active low. Pull it up to 1.8 V externally. If not used, keep it unconnected. Disabled by default, and can be enabled via software configuration.

The following figure shows a reference design for (U)SIM interface with an 8-pin (U)SIM card connector.

Figure 15: Reference Circuit of (U)SIM Interface with 8-Pin (U)SIM Card Connector

If (U)SIM card detection function is not needed, please keep USIM_DET unconnected.

A reference circuit for (U)SIM card interface with a 6-pin (U)SIM card connector is illustrated in the following figure.

Figure 16: Reference Circuit of (U)SIM Interface with 6-Pin (U)SIM Card Connector

To enhance the reliability and availability of the (U)SIM card in applications, please follow the criteria below in (U)SIM circuit design.

- Place the (U)SIM card connector as close to the module as possible. Keep the trace length as less than 200 mm as possible.
- Keep (U)SIM card signals away from RF and VBAT traces.
- To avoid cross-talk between USIM_DATA and USIM_CLK, keep them away from each other and shield them with surrounded ground. In addition, USIM_RST also needs to be shielded with surrounded ground.

- To offer good ESD protection, it is recommended to add a TVS diode array with a parasitic capacitance not exceeding 50 pF. The 22 Ω resistors should be added in series between the module and the (U)SIM card to facilitate debugging. Add 22 pF capacitors parallel on USIM_DATA, USIM_CLK and USIM_RST signal traces to filter RF interference, and place them as close to the (U)SIM card connector as possible. Please note that the (U)SIM peripheral circuit should be close to the (U)SIM card connector.
- The pull-up resistor on USIM_DATA can improve anti-jamming capability of the (U)SIM card. If the (U)SIM card traces are too long, or the interference source is relatively close, it is recommended to add a pull-up resistor near the (U)SIM card connector.

4.3. SD Card Interface

The module supports SD 3.0 protocol. The pin definition of the SD card interface is shown below.

Table 16: Pin Definition of SD Card Interface

Pin Name	Pin No.	I/O	Description	Comment
SD_CLK	188	DO	SD card clock	
SD_CMD	180	DIO	SD card command	
SD_DATA0	184	DIO	SDIO data bit 0	Control characteristic impedance as 45 Ω .
SD_DATA1	185	DIO	SDIO data bit 1	
SD_DATA2	177	DIO	SDIO data bit 2	
SD_DATA3	181	DIO	SDIO data bit 3	
SD_DET	174	DI	SD card hot-swap detect	Active low by default. External 1.8 V pull-up is required.
SD_LDO9C	176	PO	Power supply for SD card	When using it, it is recommended to add 1–4.7 μ F bypass capacitors with a total capacitance not exceeding 18.8 μ F.
SD_LDO6C	173	PO	SD card pull-up power supply	Only for SD card pull-up. When using it, it is recommended to add 1–3 μ F bypass capacitors with a total capacitance not exceeding 3 μ F.

A reference circuit for SD card interface is shown below.

Figure 17: Reference Circuit for SD Card Interface

SD_LDO9C is a peripheral driver power supply for SD card. The maximum drive current is 600 mA. Because of the high drive current, it is recommended that the trace width is 0.6 mm or above. To ensure the stability of drive power, add a 4.7 μ F and a 33 pF capacitor in parallel near the SD card connector.

SD_CMD, SD_CLK and SD_DATA[0:3] are all high speed signal traces. In PCB design, control the characteristic impedance of them as 45 Ω , and do not cross them with other traces. It is recommended to route these traces on the inner layer of PCB, and keep them of the same length. Additionally, SD_CLK needs separate ground shielding.

Layout guidelines:

- Control impedance to 45 $\Omega \pm 10\%$, and add ground shielding.
- The trace length difference between SD_CLK and SD_CMD/SD_DATA[0:3] should be less than 2 mm.
- Trace length requirements: less than 150 mm for traces of 50 Mbps, less than 50 mm for traces of 140 Mbps.
- The spacing between signal lines should be 1.5 times the line width.
- The capacitive reactance of SD_DATA[0:3] traces should be less than 8 pF.

Table 17: SD Card Signal Trace Length Inside the Module

Pin No.	Signal	Length (mm)
188	SD_CLK	49.18

180	SD_CMD	49.16
184	SD_DATA0	49.46
185	SD_DATA1	49.79
177	SD_DATA2	49.42
181	SD_DATA3	49.64

4.4. GPIO Interfaces

The module has abundant GPIO interfaces with power domain of 1.8 V. The pin definition is listed below.

Table 18: Pin Definition of GPIO Interfaces

Pin Name	Pin No.	I/O	Description	Comment
GPIO_6	94	DIO	General-purpose input/output	Wakeup.
GPIO_7	19	DIO		
GPIO_8	311	DIO		
GPIO_9	307	DIO		Wakeup.
GPIO_12	198	DIO		
GPIO_13	191	DIO		
GPIO_14	183	DIO		Do not pull it up during startup.
GPIO_15	187	DIO		Do not pull it up during startup; Wakeup.
GPIO_16	111	DIO		Wakeup.
GPIO_17	110	DIO		Wakeup.
GPIO_18	122	DIO		
GPIO_19	119	DIO		
GPIO_24	43	DIO		

GPIO_32	351	DIO	
GPIO_33	170	DIO	
GPIO_34	315	DIO	
GPIO_35	178	DIO	Wakeup.
GPIO_42	318	DIO	
GPIO_43	155	DIO	
GPIO_44	202	DIO	Wakeup.
GPIO_45	203	DIO	
GPIO_46	207	DIO	
GPIO_47	319	DIO	
GPIO_61	51	DIO	Wakeup.
GPIO_62	322	DIO	
GPIO_63	326	DIO	Do not pull it up during startup.
GPIO_68	123	DIO	Wakeup.
GPIO_93	147	DIO	Do not pull it up during startup; Wakeup.
GPIO_105	175	DIO	
GPIO_106	167	DIO	
GPIO_107	210	DIO	
GPIO_108	310	DIO	
GPIO_165	150	DIO	
GPIO_166	154	DIO	
GPIO_158	151	DIO	Wakeup.

4.5. UART Interfaces

The module supports up to eleven groups of UART interfaces. Two of them are default configurations, see **Table 19** for details. Nine of them can be multiplexed from other interfaces, see **Table 23** for details.

Two default UART interfaces are:

- UART: 4-wire UART interface, supports RTS and CTS hardware flow control, up to 4 Mbps.
- DBG_UART: 2-wire UART interface, dedicated for debugging.

Pin definition of the UART interfaces is given as follows:

Table 19: Pin Definition of UART Interfaces

Pin Name	Pin No.	I/O	Description	Comment
DBG_TXD	317	DO	Debug UART transmit	If not used, keep them unconnected. Cannot be multiplexed into generic GPIOs.
DBG_RXD	320	DI	Debug UART receive	
UART_TXD	308	DO	UART transmit	If not used, keep them unconnected.
UART_RXD	309	DI	UART receive	
UART_RTS	305	DO	DCE request to send	
UART_CTS	306	DI	DCE clear to send	

UART is a 4-wire UART interface with 1.8 V power domain. A level-shifting chip should be used if your application is equipped with a 3.3 V UART interface. The following figure shows a reference design.

Figure 18: Reference Circuit with Level-Shifting Chip (for UART)

A level translator and an RS-232 level-shifting chip are recommended to be added between the module and PC, as shown below.

Figure 19: Reference Circuit with RS232 Level-Shifting Chip (for UART)

NOTE

DBG_UART is similar to UART. For the reference design of DBG_UART, refer to that of UART.

4.6. I2C Interfaces

The module provides up to sixteen groups of I2C interfaces. Five of them are dedicated I2C interfaces used for camera and sensor peripherals. Three of them are generic I2C interfaces that can be used for TP and NFC peripherals, see **Table 20** for details. Eight of them can be multiplexed from other interfaces, see **Table 23** for details.

All I2C interfaces are open drain signals and therefore must be pulled up externally. The reference power domain is 1.8 V. The sensor I2C interface only supports sensors of aDSP architecture. CCI_I2C signals are controlled by Linux Kernel code and support connection to video output related devices.

Table 20: Pin Definition of I2C Interfaces

Pin Name	Pin No.	I/O	Description	Comment
I2C0_SCL	192	OD	I2C serial clock	External 1.8 V pull-up is required. If not used, keep
I2C0_SDA	189	OD	I2C serial data	

LPI_SENSOR_I2C1_SDA	152	OD	I2C data 1 for external sensor	them unconnected. 1.8 V power domain.
LPI_SENSOR_I2C1_SCL	149	OD	I2C clock 1 for external sensor	
LPI_SENSOR_I2C2_SDA	153	OD	I2C data 2 for external sensor	
LPI_SENSOR_I2C2_SCL	156	OD	I2C clock 2 for external sensor	
TP_I2C_SCL	328	OD	TP I2C clock	1.8 V power domain. External 1.8 V pull-up is required. If not used, keep them unconnected.
TP_I2C_SDA	325	OD	TP I2C data	
NFC_I2C_SDA	106	OD	NFC I2C clock	
NFC_I2C_SCL	107	OD	NFC I2C data	
CCI_I2C_SDA0	33	OD	I2C data of camera 0	
CCI_I2C_SCL0	36	OD	I2C clock of camera 0	
CCI_I2C_SDA1	401	OD	I2C data of camera 1	
CCI_I2C_SCL1	402	OD	I2C clock of camera 1	
CCI_I2C_SDA2	71	OD	I2C data of camera 2 and 3	
CCI_I2C_SCL2	70	OD	I2C clock of camera 2 and 3	

4.7. SPI Interface

The module supports up to ten groups of SPI interfaces. One of them is default configuration, and supports master mode only, see **Table 21** for details. Nine of them can be multiplexed from other interfaces, see **Table 23** for details.

Table 21: Pin Definition of SPI Interface

Pin Name	Pin No.	I/O	Description	Comment
SPI_CLK	197	DO	SPI clock	1.8 V power domain. Supports master mode only.
SPI_CS	193	DO	SPI chip select	
SPI_MISO	196	DI	SPI master-in slave-out	

SPI_MOSI	194	DO	SPI master-out slave-in
----------	-----	----	-------------------------

4.8. I2S Interfaces

The module supports up to five groups of I2S interfaces. Two of them are default configurations, see **Table 22** for details. Three of them can be multiplexed from other interfaces, see **Table 25** for details.

Table 22: Pin Definition of I2S Interfaces

Pin Name	Pin No.	I/O	Description
MI2S_MCLK	142	DO	I2S master clock
MI2S_SCLK	140	DO	I2S serial clock
MI2S_WS	137	DO	I2S word select
MI2S_DATA0	133	DIO	I2S data channel 0
MI2S_DATA1	136	DIO	I2S data channel 1
LPI_MI2S_SCLK	138	DO	LPI I2S serial clock
LPI_MI2S_WS	139	DO	LPI I2S word select
LPI_MI2S_DATA0	135	DIO	LPI I2S data channel 0
LPI_MI2S_DATA1	134	DIO	LPI I2S data channel 1
LPI_MI2S_DATA2	130	DIO	LPI I2S data channel 2
LPI_MI2S_DATA3	131	DIO	LPI I2S data channel 3
CODEC_RST_N	126	DO	Audio codec reset

4.9. UART/SPI/I2C/I2S Multiplexing Relationship

UART/SPI/I2C multiplexing relationship is shown in the following table.

Table 23: UART/SPI/I2C Multiplex Relationship

Channel	Pin No.	Pin Name	GPIO No.	Multiplex Function		
				UART	SPI	I2C
QUP0-SE0	189	I2C0_SDA	GPIO_0	UART00_CTS	SPI00_MISO	I2C00_SDA
	192	I2C0_SCL	GPIO_1	UART00_RTS	SPI00_MOSI	I2C00_SCL
	605	PCIE1_RST_N	GPIO_2	UART00_TXD	SPI00_CLK	-
	607	PCIE1_WAKE_N	GPIO_3	UART00_RXD	SPI00_CS0	-

NOTE

1. The QUP SE channel can be used flexibly to support UART, SPI and I2C interfaces.
2. Note that one QUP SE channel cannot support two protocols at the same time. For example, QUP0-SE0 cannot support UART and I2C at the same time. If one interface only occupies parts of the pins in one QUP SE channel, then other pins in the channel can only be used as GPIOs.

Table 24: I2S Multiplex Relationship Table

Channel	Pin No.	Pin Name	GPIO No.	Multiplex Function
				I2S

4.10. ADC Interfaces

The module provides four analog-to-digital converter (ADC) interfaces that support up to 15-bit resolution. The pin definition is shown below.

Table 25: Pin Definition of ADC Interfaces

Pin Name	Pin No.	I/O	Description	Comment
ADC0	399	AI	General-purpose ADC interface	Maximum input voltage 1.8 V.
ADC1	11	AI		
ADC2	15	AI		
ADC3	403	AI		

4.11. LCM Interface

The module provides one LCM interface based on MIPI_DSI standard. The interface supports one group of 4-lane high-speed differential data transmission with maximum speed rate of 2.5 Gbps/lane and supports FHD + (1200 × 2520) @144 fps. The pin definition of the LCM interface is shown below.

Table 26: Pin Definition of LCM Interface

Pin Name	Pin No.	I/O	Description	Comment
PWM1	340	DO	PWM output 1	Backlight control.
DSI_CLK_P	366	AO	LCD MIPI clock (+)	Requires differential impedance of 85 Ω.
DSI_CLK_N	370	AO	LCD MIPI clock (-)	
DSI_LN0_P	380	AO	LCD MIPI lane 0 data (+)	
DSI_LN0_N	377	AO	LCD MIPI lane 0 data (-)	
DSI_LN1_P	376	AO	LCD MIPI lane 1 data (+)	
DSI_LN1_N	373	AO	LCD MIPI lane 1 data (-)	
DSI_LN2_P	372	AO	LCD MIPI lane 2 data (+)	
DSI_LN2_N	369	AO	LCD MIPI lane 2 data (-)	
DSI_LN3_P	368	AO	LCD MIPI lane 3 data (+)	
DSI_LN3_N	365	AO	LCD MIPI lane 3 data (-)	
LCD_TE	374	DI	LCD tearing effect	1.8 V power domain.
LCD_RST	378	DO	LCD reset	1.8 V power domain. External pull-up is not required.

The following figure shows a reference design for LCM interface.

Figure 20: Reference Circuit for LCM Interface

MIPI are high speed signal traces. It is recommended to add common-mode filters in series near the LCM connector to improve protection against electromagnetic radiation interference.

It is recommended to read the LCM ID register through MIPI when compatible design with other displays is required. If several LCMs share the same IC, it is recommended that the LCM module factory should burn an OTP register to distinguish different screens. You can also connect the LCD_ID pin of LCM to the ADC pin of the module, but note that the output voltage of LCD_ID should not exceed the voltage range of the ADC pin.

You can design external backlight driver circuit for LCM according to actual requirement. The reference design is shown in the figure below, in which PWM1 is used for backlight brightness adjustment.

Figure 21: LCM External Backlight Driver Reference Circuit

4.12. Touch Panel Interface

The module provides one group of I2C interface for connection with Touch Panel (TP), and provides the corresponding power supply and interrupt pins for TP. The pin definition of touch panel interface is given below.

Table 27: Pin Definition of Touch Panel Interface

Pin Name	Pin No.	I/O	Description	Comment
TP_RST	324	DO	TP reset	1.8 V power domain.
TP_INT	321	DI	TP interrupt	
TP_I2C_SCL	328	OD	TP I2C clock	External 1.8 V pull-up is required.
TP_I2C_SDA	325	OD	TP I2C data	If not used, keep them unconnected.

A reference design for TP interface is shown below.

Figure 22: Reference Circuit for TP Interface

4.13. Camera Interfaces

Based on the MIPI_CSI standard, the module provides four groups of 4-lane MIPI_CSI with maximum transmission rate of 2.5 Gbps/lane. The module supports two cameras (4-lane + 4-lane), or three cameras (4-lane + 4-lane + 4-lane), or four cameras (4-lane + 4-lane + 4-lane + 4-lane). The video and photo quality are determined by various factors such as the camera sensor, camera lens quality.

Table 28: Pin Definition of Camera Interfaces

Pin Name	Pin No.	I/O	Description	Comment
VREG_L1P_1P05	116	PO	DVDD for cameras 1 and 2	When using them, it is recommended to add bypass capacitors with a total capacitance not exceeding 45.3 μF.
VREG_L2P_1P1	121	PO	DVDD for cameras 0 and 3	
VREG_L3P_2P8	113	PO	AVDD for cameras 1 and 3	When using them, it is recommended to add bypass capacitors with
VREG_L4P_2P9	124	PO	AVDD for camera 0	
VREG_L5P_2P8	128	PO	AFVDD for camera 0	

VREG_L6P_1P8	117	PO	DOVDD for cameras 0, 1, 2 and 3	a total capacitance not exceeding 19 μ F.

CSI3_LN1_P	68	AI	MIPI CSI3 lane 1 data (+)	Requires differential impedance of 85 Ω.
CSI3_LN1_N	69	AI	MIPI CSI3 lane 1 data (-)	
CSI3_LN2_P	64	AI	MIPI CSI3 lane 2 data (+)	
CSI3_LN2_N	65	AI	MIPI CSI3 lane 2 data (-)	
CSI3_LN3_P	72	AI	MIPI CSI3 lane 3 data (+)	
CSI3_LN3_N	73	AI	MIPI CSI3 lane 3 data (-)	
CAM3_MCLK	74	DO	Master clock of camera 3	
CAM3_RST	67	DO	Reset of camera 3	

The following is a reference circuit for dual-camera applications.

Figure 23: Reference Circuit for Dual-Camera Applications

The following is a reference circuit for tri-camera applications.

Figure 24: Reference Circuit for Three-Camera Applications

4.13.1. MIPI Design Considerations

- Special attention should be paid to the pin definition of LCM/camera connectors. Ensure that the module and the connectors are correctly connected.
- MIPI are high speed signal lines, supporting maximum data rate of 2.5 Gbps/lane. The differential impedance should be controlled to 85 Ω . Additionally, it is recommended to route the traces on the inner layer of PCB, and do not cross them with other traces. For the same group of DSI or CSI signals, keep all MIPI traces of the same length. To avoid crosstalk, a distance of 1.5 times the trace width among MIPI signal traces is recommended. During impedance matching, do not connect GND on different planes so as to ensure impedance consistency.
- Make sure the reference ground plane for CSI/DSI is complete and integral without any cut or void.
- Route the camera CLK signals on the inner layer of the PCB and surround them with ground.
- Route CSI and DSI traces according to the following rules:
 - a) The intra-pair (P/N) spacing should be equal to the trace width.
 - b) The inter-pair spacing should be 1.5 times the trace width.
 - c) The spacing relative to other signal lines should be 2.5 times the trace width.
- Route MIPI traces according to the following rules:
 - a) Control the differential impedance to 85 $\Omega \pm 10\%$.
 - b) Control intra-lane (P/N) length difference within 0.7 mm.
 - c) Control inter-lane length difference within 2.1 mm.

Table 29: Relationship Between CSI Rate and Line Length (D-PHY)

Data Rate	Cable Length (mm)	Cable Insertion Loss (dB)	Line Length (mm)
500 Mbps/Lane	76.2	-0.5	< 260
	152.4	-1	< 190
750 Mbps/Lane	76.2	-0.7	< 210
	152.4	-1.15	< 155
1.0 Gbps/Lane	76.2	-0.75	< 200
	152.4	-1.4	< 125
1.5 Gbps/Lane	76.2	-0.9	< 145
	152.4	-1.8	< 60
2.1 Gbps/Lane	76.2	-1.3	< 170
	152.4	-2.3	< 90
2.5 Gbps/Lane	76.2	-2.1	< 210

152.4 -3.5 < 150

Table 30: Relationship Between DSI Rate and Line Length (D-PHY)

Data Rate	Cable Length (mm)	Cable Insertion Loss (dB)	Line Length (mm)
500 Mbps/Lane	76.2	-0.5	< 280
	152.4	-1.0	< 210
750 Mbps/Lane	76.2	-0.7	< 210
	152.4	-1.15	< 150
1.0 Gbps/Lane	76.2	-0.75	< 200
	152.4	-1.4	< 100
1.5 Gbps/lane	76.2	-0.9	< 135
	152.4	-1.8	< 40
2.1 Gbps/lane	76.2	-1.3	< 150
	152.4	-2.3	< 80
2.5 Gbps/lane	76.2	-2.1	< 70
	152.4	-3.5	< 0

NOTE

1. The cable length listed above is an example with specified insertion loss.
2. The cable insertion loss can be obtained from the cable datasheet provided by the manufacturer. The cable insertion loss in the actual design should not be worse than those listed above.
3. The line length in the above table includes the length of the line inside the module.

Table 31: Trace Length of MIPI Differential Pairs Inside the Module

Pin No.	Pin Name	Length (mm)	Length Difference (P - N)
370	DSI_CLK_N	25.97	-0.29

4.14. Sensor Interfaces

The module supports communication with sensors via I2C interface, and supports various sensors such as acceleration sensor, gyroscopic sensor, compass, light sensor and temperature sensor.

Table 32: Pin Definition of Sensor Interfaces

Pin Name	Pin No.	I/O	Description	Comment
ACCEL_GYRO_INT1	161	DI	Acceleration/ gyroscope sensor interrupt 1	Can be multiplexed into generic GPIOs. 1.8 V power domain.
ACCEL_GYRO_INT2	158	DI	Acceleration/ gyroscope sensor interrupt 2	
MAG_INT	186	DI	Geomagnetic sensor interrupt	
ALPS_INT	157	DI	Light/proximity sensor interrupt	
HALL_INT	190	DI	Hall sensor interrupt	

4.15. Emergency Download Interface

USB_BOOT is an emergency download interface. Pulling it up to LDO18B_1V8 during power-up will force the module into emergency download mode. This is an emergency option when failures such as abnormal start-up or running occur. For the convenient firmware upgrade and debugging in the future, please reserve this pin.

Figure 25: Reference Circuit for Emergency Download Interface

4.16. PCIe Interface

The module provides one PCIe interface, which supports 2-lane PCIe Gen 3 with data rate up to 8 Gbps.

Table 33: Pin Definition of PCIe Interface

Pin Name	Pin No.	I/O	Description	Comment
PCIE1_REFCLK_P	594	AIO	PCle1 reference clock (+)	
PCIE1_REFCLK_M	593	AIO	PCle1 reference clock (-)	
PCIE1_RX0_P	597	AI	PCle1 receive 0 (+)	
PCIE1_RX0_M	596	AI	PCle1 receive 0 (-)	
PCIE1_RX1_P	599	AI	PCle1 receive 1 (+)	Requires differential impedance of 85 Ω.
PCIE1_RX1_M	598	AI	PCle1 receive 1 (-)	
PCIE1_TX0_P	601	AO	PCle1 transmit 0 (+)	
PCIE1_TX0_M	600	AO	PCle1 transmit 0 (-)	
PCIE1_TX1_P	603	AO	PCle1 transmit 1 (+)	
PCIE1_TX1_M	602	AO	PCle1 transmit 1 (-)	
PCIE1_RST_N	605	DO	PCle1 reset	
PCIE1_CLKREQ_N	606	DI	PCle1 clock request	1.8 V power domain.
PCIE1_WAKE_N	607	DI	PCle1 wake up	

Table 34: Trace Length of Differential Pairs Inside the Module

Pin No.	Signal	Length (mm)	Length Difference (P - M)
594	PCIE1_REFCLK_P	19.72	0.07
593	PCIE1_REFCLK_M	19.65	
601	PCIE1_TX0_P	28.37	-0.02
600	PCIE1_TX0_M	28.39	

603	PCIE1_TX1_P	34.28	-0.33
602	PCIE1_TX1_M	34.61	
597	PCIE1_RX0_P	19.32	0.15
596	PCIE1_RX0_M	19.17	
599	PCIE1_RX1_P	21.40	0.10
598	PCIE1_RX1_M	21.30	

4.17. NFC Interface*

SG560D series module provides one NFC interface.

Table 35: Pin Definition of NFC Interface

Pin Name	Pin No.	I/O	Description	Comment
NFC_CLK	95	DO	NFC clock	
NFC_CLK_REQ	102	DI	NFC clock request	
NFC_DWL_REQ	103	DO	NFC download control request	
NFC_EN	98	DO	NFC enable	Internally pulled up by default.
NFC_INT	99	DI	NFC interrupt	
NFC_I2C_SDA	106	OD	NFC I2C data	External 1.8 V pull-up is required. If not used, keep them unconnected.
NFC_I2C_SCL	107	OD	NFC I2C clock	

5 RF Specifications

Appropriate antenna type and design should be used with matched antenna parameters according to specific application. It is required to perform a comprehensive functional test for the RF design before mass production of terminal products. The entire content of this chapter is provided for illustration only. Analysis, evaluation and determination are still necessary when designing target products.

5.1. Cellular Network

5.1.1. Antenna Interfaces & Frequency Bands

The pin definition is shown below:

Table 36: Pin Definition of Cellular Network Interfaces of SG560D-CN

Pin Name	Pin No.	I/O	Description
ANT0	211	AIO	5G NR (n1/n3/n5/n8/n28 TRX, n41/n78/n79 TRX1) & LTE LMHB TRX, WCDMA B1/B5/B8 TRX
ANT1	244	AI	5G NR (n1/n41/n78/n79 DRX MIMO) & LTE (B1/B41 DRX MIMO)

5G NR	5G NR HPUE bands (n41/n77/n78)	26 dBm +2/-3 dB (Class 2)	< -40 dBm ¹¹
	Other 5G NR bands	23 dBm $\pm$ 2 dB (Class 3)	< -40 dBm ¹¹

5.1.3. Rx Sensitivity

The following table shows conducted RF receiving sensitivity of the module.

Table 42: Conducted RF Rx Sensitivity of SG560D-CN

Mode	Frequency	Primary	Diversity	SIMO ¹²	3GPP (SIMO)
WCDMA	WCDMA B1	-110	-110	TBD	-106.7 dBm
	WCDMA B5	-112.4	-113	TBD	-104.7 dBm
	WCDMA B8	-111	-112.5	TBD	-103.7 dBm
LTE	LTE-FDD B1 (10 MHz)	-97.2	-97	-102.3	-96.3 dBm

¹¹ For 5G NR frequency band, there are different minimum power standards under different channel bandwidths. For details, see **clause 6.3.1** of TS 38.101-1 [2].

¹² For the SIMO receiving sensitivity, WCDMA and LTE B3/B5/B8/B34/B38/B39/B40 bands and 5G NR n28 are tested with 2 RX antennas, and LTE B1/B41 bands and 5G NR n1/n41/n78/n79 bands are tested with 4 RX antennas.

	LTE-FDD B3 (10 MHz)	-97	-97	-100	-93.3 dBm
	LTE-FDD B5 (10 MHz)	-99.5	-100.5	-103	-94.3 dBm
	LTE-FDD B8 (10 MHz)	-98.5	-100	-102	-93.3 dBm
	LTE- TDD B34 (10 MHz)	-98	-98	-101	-96.3 dBm
	LTE- TDD B38 (10 MHz)	-96.5	-97	-99.5	-96.3 dBm
	LTE- TDD B39 (10 MHz)	-99	-98.5	-102	-96.3 dBm
	LTE- TDD B40 (10 MHz)	-97.3	-98	-100.5	-96.3 dBm
	LTE- TDD B41 (10 MHz)	-95	-96.5	-100.5	-94.3 dBm
5G NR	5G NR FDD n1 (20 MHz)	-93.4	-95	-100	-93.1 dBm
	5G NR FDD n3 (20 MHz)	TBD	TBD	TBD	-90.8 dBm
	5G NR FDD n5 (20 MHz)	TBD	TBD	TBD	-90.8 dBm
	5G NR FDD n8 (20 MHz)	TBD	TBD	TBD	-90.0 dBm
	5G NR FDD n28 (20 MHz)	-97	-96.5	-99.5	-90.1 dBm
	5G NR TDD n41 (100 MHz)	-84	-87	-91	-84.0 dBm
	5G NR TDD n78 (100 MHz)	-87.5	-87	-92	-84.6 dBm
	5G NR TDD n79 (100 MHz)	-87.5	-86.5	-92.5	-84.6 dBm

Table 43: Conducted RF Rx Sensitivity of SG560D-EU (Unit:dBm)

Mode	Frequency	Primary	Diversity	SIMO ¹³	3GPP (SIMO)
GSM	EGSM900	-109	-		-102.4
	DCS1800	-108	-	-	-102.4
WCDMA	WCDMA B1	-109.5	-110.5	TBD	-106.7
	WCDMA B5	-111	-112	TBD	-104.7

¹³ For the SIMO receiving sensitivity, WCDMA and LTE B5/B8/B20/B28/B32/B39 bands and 5G NR n5/n8/n20/n28 bands are tested with 2 RX antennas, and LTE B1/B3/B7/B38/B40/B41/B42 bands and 5G NR n1/n3/n7/n38/n40/n41/n77/n78 bands are tested with 4 RX antennas.

	WCDMA B8	-110.5	-112	TBD	-103.7
LTE	LTE-FDD B1 (10 MHz)	-98	-98.8	-102.6	-96.3
	LTE-FDD B3 (10 MHz)	-97.5	-98.2	-102.9	-93.3
	LTE-FDD B5 (10 MHz)	-99.5	-100.5	-102.6	-94.3
	LTE-FDD B7 (10 MHz)	-97.3	-98	-101.5	-94.3
	LTE-FDD B8 (10 MHz)	-99	-100.5	-102.4	-93.3
	LTE- FDD B20 (10 MHz)	-99.5	-100.5	-102.5	-93.3
	LTE- FDD B28 (10 MHz)	-98.4	-99.9	-102	-94.8
	LTE- FDD B32 (10 MHz)	TBD	TBD	TBD	-95.3
	LTE- TDD B38 (10 MHz)	-96	-98	-100.9	-96.3
	LTE- TDD B39 (10 MHz)	-98.5	-98	-100.8	-96.3
	LTE- TDD B40 (10 MHz)	-96.5	-97	-100	-96.3
	LTE- TDD B41 (10 MHz)	-95	-96	-102.8	-94.3
	LTE- TDD B42 (10 MHz)	-97.5	-98.5	-102.8	-95.0
5G NR	5G NR FDD n1 (20 MHz)	-95.6	-95.7	-100.1	-93.8
	5G NR FDD n3 (20 MHz)	-94.8	-94.3	-100.1	-90.8
	5G NR FDD n5 (20 MHz)	-95.8	-95.8	-99.2	-90.8
	5G NR FDD n7 (20 MHz)	-94.5	-94.4	-99.1	-91.8
	5G NR FDD n8 (20 MHz)	-95	-94.8	-99.3	-90
	5G NR FDD n20 (20 MHz)	-96.5	-96.6	-99.2	-89.8
	5G NR FDD n28 (30 MHz)	-93.4	-93	-96	-90.8
	5G NR FDD n38 (40 MHz)	-91.3	-91.4	-96.4	-90.7
	5G NR FDD n40 (80 MHz)	-89.5	-89.6	-93.5	-87.6
	5G NR TDD n41 (100 MHz)	-87	-87.2	-91.5	-84.7
	5G NR TDD n77 (100 MHz)	-86.5	-87.6	-93.6	-85.1

5G NR TDD n78 (100 MHz)	-87.2	-87.7	-93.5	-85.6
-------------------------	-------	-------	-------	-------

5.1.4. Reference Design of Cellular Antenna Interfaces

The module provides four RF antenna interfaces for antenna connection.

It is recommended to reserve a π -type matching circuit for better RF performance, and the π -type matching components (a capacitor-resistor-capacitor group) should be placed as close to the antenna as possible. The capacitors are not mounted by default.

Figure 26: Reference Circuit for RF Antenna Interfaces

5.2. GNSS

The module integrates the IZat™ GNSS engine (Gen 9) which supports multiple positioning and navigation systems including GPS, GLONASS, BDS, Galileo, NavIC, QZSS, SBAS. With an embedded LNA, the module provides greatly improved positioning accuracy.

5.2.1. Antenna Interface & Frequency Bands

The following table shows the pin definition, frequency, and performance of GNSS antenna interface.

Table 44: Pin Definition of GNSS Antenna Interface

Pin Name	Pin No.	I/O	Description
ANT_GNSS	302	AI	GNSS antenna interface

Table 45: Operating Frequency

Type	Frequency	Unit
GPS/SBAS/QZSS	1575.42 $\pm$ 1.023 (L1) 1176.45 $\pm$ 0.23 (L5)	MHz
GLONASS	1597.5–1605.8	
Galileo	1575.42 $\pm$ 2.046 (E1) 1176.45 $\pm$ 0.23 (E5a)	
BDS	1561.098 $\pm$ 2.046	
NAVIC	1176.45 $\pm$ 0.23 (L5)	

5.2.2. GNSS Performance

Table 46: GNSS Performance

Parameter	Description	Typ.	Unit
Sensitivity (GNSS)	Acquisition	-146	dBm
	Reacquisition	-158	
	Tracking	-159	
TTFF (GNSS)	Cold start @ open sky	33.21	s
	Warm start @ open sky	22.84	
	Hot start @ open sky	0.92	
Accuracy (GNSS)	CEP-50	2	m

NOTE

1. Tracking sensitivity: the minimum GNSS signal power at which the module can maintain lock (keep positioning for at least 3 minutes continuously).
2. Reacquisition sensitivity: the minimum GNSS signal power required for the module to maintain lock within 3 minutes after loss of lock.
3. Acquisition sensitivity: the minimum GNSS signal power at which the module can fix position successfully within 3 minutes after executing cold start command.

5.2.3. Reference Design

5.2.3.1. Reference Design for GNSS Passive Antenna

GNSS antenna interface supports passive ceramic antennas and other types of passive antennas. A reference circuit design is given below.

Figure 27: Reference Circuit for GNSS Passive Antenna

NOTE

It is not recommended to add an external LNA when using a passive GNSS antenna.

5.2.3.2. Reference Design for GNSS Active Antenna

In any case, it is recommended to use a passive antenna. If active antenna is indeed needed in your application, it is recommended to reserve a π -type attenuation circuit and use high-performance LDO as the power supply. The active antenna is powered by a 56 nH inductor through the antenna's signal path. The common power supply voltage ranges from 3.3 V to 5.0 V. Although featuring low power consumption, the active antenna still requires stable and clean power supplies. It is recommended to use a high-performance LDO. A reference design of the GNSS active antenna is shown below.

Figure 28: Reference Circuit for GNSS Active Antenna

5.2.3.3. GNSS RF Design Guidelines

Improper design of antenna and layout may cause reduced GNSS receiving sensitivity, longer GNSS positioning time, or reduced positioning accuracy. To avoid this, follow the reference design rules as below:

- Maximize the distance between the GNSS RF part and the cellular RF part (including trace routing and antenna layout) to avoid mutual interference.
- In user systems, GNSS RF signal traces and RF components should be placed far away from high-speed circuits, switch-mode power supplies, power inductors, the clock circuit of single-chip microcomputers, etc.
- For harsh electromagnetic environment or a design that requires better ESD protection, diodes with ultra-low junction capacitance such as 0.5 pF can be selected and added in the antenna interface. Otherwise, there will be effects on the impedance characteristic of the RF circuit loop or attenuation of the bypass RF signal may be caused.
- Control the impedance of either feeder line or PCB trace to 50 Ω, and keep the trace length as short as possible.
- Refer to **Chapter 5.5** for the GNSS reference circuit design.

5.3. Wi-Fi/Bluetooth (SG560D-WF)

The module provides one shared antenna interface ANT_WIFI_BT to support Wi-Fi and Bluetooth functions. The interface impedance is 50 Ω. You can connect external antennas such as PCB antenna, sucker antenna and ceramic antenna to the module via the interface to achieve Wi-Fi and Bluetooth functions. The module further provides one Wi-Fi antenna interface ANT_WIFI_MIMO to support Wi-Fi 2 × 2 MU-MIMO, tri-band 2.4 GHz, 5 GHz and 6 GHz function. The module complies with IEEE 802.11a/b/g/n/ac/ax and supports Dual Band Simultaneous (DBS) with dual MAC.

5.3.1. Antenna Interface & Frequency Bands

Table 47: Pin Definition of Wi-Fi/Bluetooth Interfaces

Pin Name	Pin No.	I/O	Description
ANT_WIFI/BT	92	AIO	Wi-Fi/Bluetooth antenna interface
ANT_WIFI_MIMO	86	AIO	Wi-Fi MIMO antenna interface

Table 48: Wi-Fi/Bluetooth Frequency

Type	Frequency	Unit
Wi-Fi 802.11a/b/g/n/ac/ax	2402–2482	MHz
	5180–5825	
	5925–7125	
Bluetooth 5.2 LE	2402–2480	MHz

5.3.2. Wi-Fi Overview(SG560D-WF)

The module supports 2.4 GHz single-band, 2.4 GHz & 5 GHz dual-band and 2.4 GHz & 5 GHz & 6 GHz tri-band WLAN wireless communication based on IEEE 802.11a/b/g/n/ac/ax standard protocols. The maximum data rate is 3.6 Gbps. The features are as below:

- Support Wake-on-WLAN (WoWLAN)
- Support ad hoc mode
- Support WAPI SMS4 hardware encryption
- Support AP and STA modes
- Support Wi-Fi Direct
- Support Dual Band Simultaneous (DBS)
- Support 20/40 MHz channel bandwidths for 2.4 GHz and 20/40/80/160 MHz channel bandwidths for 5 GHz and 6 GHz
- Support MCS 0–7 for HT20 and HT40
- Support MCS 0–8 for VHT20
- Support MCS 0–9 for VHT40 and VHT80
- Support MCS 0–13 for HE20, HE40, HE80 and HE160

The following table lists the Wi-Fi transmitting and receiving performance of the module.

Table 49: Wi-Fi Transmitting Performance

Frequency	Standard	Rate	Output
2.4 GHz	802.11b	1 Mbps	18 dBm $\pm$ 2.5 dB
	802.11b	11 Mbps	16 dBm $\pm$ 2.5 dB

NOTE

The module conforms to the IEEE specifications.

5.3.3. Bluetooth Overview

The module supports Bluetooth 5.2 (BR/EDR+BLE) specification, as well as GFSK, 8-DPSK, $\pi/4$ -DQPSK modulation modes.

- Maximally support up to 7-lane wireless connections.
- Maximally support up to 3.5 Piconets at the same time.
- Support one SCO or eSCO connection.

The BR/EDR channel bandwidth is 1 MHz, and can accommodate 79 channels. The BLE channel bandwidth is 2 MHz, and can accommodate 40 channels.

Table 51: Bluetooth Data Rate and Version

Version	Data Rate	Maximum Application Throughput
1.2	1 Mbit/s	> 80 kbit/s
2.0 + EDR	3 Mbit/s	> 80 kbit/s
3.0 + HS	24 Mbit/s	Refer to 3.0 + HS
4.0	24 Mbit/s	Refer to 4.0 LE
5.0	48 Mbit/s	Refer to 5.0 LE
5.1	TBD	Refer to 5.1 LE
5.2	TBD	Refer to 5.2 LE

Referenced specifications are listed below:

- *Bluetooth Low Energy RF PHY Test Specification, RF-PHY.TS/4.0.0, December 15, 2009*
- *Bluetooth 5.0 RF-PHY Cover Standard: RF-PHY.TS.5.0.0, December 06, 2016*

Table 52: Bluetooth Transmitting and Receiving Performance

Transmitter Performance			
Packet Types	DH5	2-DH5	3-DH5
Transmitting Power	10 $\pm$ 2.5 dBm	8 $\pm$ 2.5 dBm	8 $\pm$ 2.5 dBm
Receiver Performance			
Packet Types	DH5	2-DH5	3-DH5
Receiving Sensitivity	-93 dBm	-92 dBm	-86 dBm

5.3.4. Reference Design

A reference circuit design for Wi-Fi/Bluetooth antenna interface is shown as below. C1 and C2 are not mounted and a 0 Ω resistor is mounted on R1 by default.

Figure 29: Reference Circuit for Wi-Fi/Bluetooth Antenna

A reference circuit design for Wi-Fi MIMO antenna interface is shown as below. C3 and C4 are not mounted and a 0 Ω resistor is mounted on R2 by default.

Figure 30: Reference Circuit for Wi-Fi MIMO Antenna

5.4. Reference Design of RF Routing

When designing PCB, characteristic impedance of all RF traces should be controlled to $50\ \Omega$. Generally, the impedance of RF traces is determined by materials' dielectric constant, trace width (W), spacing between RF traces and grounds (S) and height from the reference ground to the signal layer (H). Microstrip or coplanar waveguide is typically used in RF layout to control characteristic impedance. The following are reference designs of microstrip or coplanar waveguide with different PCB structures when characteristic impedance of RF traces is controlled to $50\ \Omega$.

Figure 31: Microstrip Design on a 2-layer PCB

Figure 32: Coplanar Waveguide Design on a 2-layer PCB

Figure 33: Coplanar Waveguide Design on a 4-layer PCB (Layer 3 as Reference Ground)

Figure 34: Coplanar Waveguide Design on a 4-layer PCB (Layer 4 as Reference Ground)

To ensure better RF performance and reliability, the following conditions should be complied with in RF layout design:

- Use an impedance simulation tool to accurately control the characteristic impedance of RF traces to 50 Ω .
- GND pins adjacent to RF pins should not be designed as thermal relief pads, and should be fully connected to ground.
- Clearance between RF pins and RF connector should be as short as possible, and all right-angle (90°) traces should be changed to the ones with the angle of 135°.
- There should be clearance under the signal pin of the antenna connector or solder joint.
- The reference ground of RF traces should be complete. Meanwhile, ground vias around RF traces and the reference ground can improve RF performance. The clearance between ground vias and RF traces should be at least twice the width of RF signal traces ($2 \times W$).
- Keep RF traces away from interference sources, and avoid intersection and paralleling between any traces on adjacent layers.

For more details about RF layout, see **document [2]**.

5.5. Antenna Installation

5.5.1. Antenna Design Requirement

Requirements for antenna design are as follows:

Table 53: Antenna Design Requirements

Antenna Type	Requirements
GNSS	● Frequency range: L1: 1559–1609 MHz L5: 1166–1187 MHz ● Polarization: RHCP or linear ● VSWR: ≤ 2 (Typ.)
	For passive antenna application: Passive antenna gain: > 0 dBi
	For active antenna application: Passive antenna gain: > 0 dBi Active antenna noise figure: < 1.5 dB Active antenna gain: > -2 dBi Active antenna embedded LNA gain: < 17 dB
GSM/UMTS/LTE/5G NR	● VSWR: ≤ 2 ● Gain: 1 dBi ● Max Input Power: 50 W ● Input Impedance: 50Ω ● Polarization Type: Vertical ● Cable insertion loss: < 1 dB: LB (< 1 GHz) < 1.5 dB: MB (1–2.3 GHz) < 2 dB: HB (> 2.3 GHz)
Wi-Fi/Bluetooth	● VSWR: ≤ 2 ● Gain: 1 dBi ● Max Input Power: 50 W ● Input Impedance: 50Ω ● Polarization Type: Vertical ● Cable Insertion Loss: < 1 dB: LB (< 1 GHz)

5.5.2. RF Connector Recommendation

If RF connector is used for antenna connection, it is recommended to use U.FL-R-SMT connector provided by Hirose.

Figure 35: Dimensions of the Receptacle (Unit: mm)

U.FL-LP series mated plugs listed in the following figure can be used to match the U.FL-R-SMT connector.

Part No.	U.FL-LP-040	U.FL-LP-066	U.FL-LP(V)-040	U.FL-LP-062	U.FL-LP-088
Mated Height	2.5mm Max. (2.4mm Nom.)	2.5mm Max. (2.4mm Nom.)	2.0mm Max. (1.9mm Nom.)	2.4mm Max. (2.3mm Nom.)	2.4mm Max. (2.3mm Nom.)
Applicable cable	Dia. 0.81mm Coaxial cable	Dia. 1.13mm and Dia. 1.32mm Coaxial cable	Dia. 0.81mm Coaxial cable	Dia. 1mm Coaxial cable	Dia. 1.37mm Coaxial cable
Weight (mg)	53.7	59.1	34.8	45.5	71.7
RoHS	YES				

Figure 36: Specifications of Mated Plugs (Unit: mm)

The following figure describes the space factor of mated connector.

Figure 37: Space Factor of Mated Connectors (Unit: mm)

6 Electrical Characteristics and Reliability

6.1. Absolute Maximum Ratings

Absolute maximum ratings for power supply and voltage on digital and analog pins of the module are listed in the following table.

Table 54: Absolute Maximum Ratings

Parameter	Min.	Max.	Unit
VBAT	-0.5	4.8	V
USB_VBUS	-0.3	12.6	V
Peak current of VBAT	-	TBD	A
Voltage on digital pins	-0.3	2.1	V

6.2. Power Supply Ratings

Table 55: Power Supply Ratings

Parameter	Description	Conditions	Min.	Typ.	Max.	Unit
VBAT	VBAT	The actual input voltages must stay between the minimum and maximum values.	3.55	4	4.4	V
USB_VBUS	USB/charger insertion detection;	-	3.7	5.0	12.6	V

	Charging power input; Power output for OTG device					
VRTC	Power supply for RTC	-	2.0	3.0	3.25	V

6.3. Power Consumption

Table 56: Power Consumption of SG560D-CN

Mode	Conditions	Typ.	Unit
OFF state	Power down	196	μA

V _{IL}	Input low voltage	-0.3	0.89	V

V _{OH}	Output high voltage	2.04	3.54	V
V _{OL}	Output low voltage	0	0.44	V

6.5. ESD Protection

Static electricity occurs naturally and it may damage the module. Therefore, applying proper ESD countermeasures and handling methods is imperative. For example, wear anti-static gloves during the development, production, assembly and testing of the module; add ESD protection components to the ESD sensitive interfaces and points in the product design.

Table 63: Electrostatics Discharge Characteristics (Temperature: 25–30 ℃, Humidity: 40 ±5 %)

Tested Interfaces	Contact Discharge	Air Discharge	Unit
VBAT, GND	TBD	TBD	kV
Antenna Interface	TBD	TBD	kV
Other Interfaces	TBD	TBD	kV

6.6. Operating and Storage Temperatures

Table 64: Operating and Storage Temperatures

Parameter	Min.	Typ.	Max.	Unit
Operating Temperature Range ¹⁴	-35	+25	+75	℃
Storage Temperature Range	-40	-	+90	℃

¹⁴ Within operating temperature range, the module is 3GPP compliant.

7 Mechanical Information

This chapter describes the mechanical dimensions of the module. All dimensions are measured in millimeter (mm), and the dimensional tolerances are ± 0.2 mm unless otherwise specified.

7.1. Mechanical Dimensions

Figure 38: Module Top and Side Dimensions

Figure 39: Module Bottom Dimensions (Bottom View)

NOTE

The package warpage level of the module conforms to the JEITA ED-7306 standard.

7.2. Recommended Footprint

Figure 40: Recommended Footprint

NOTE

Keep at least 3 mm between the module and other components on the motherboard to improve soldering quality and maintenance convenience.

7.3. Top and Bottom Views

Figure 41: Top & Bottom Views of the Module

NOTE

Images above are for illustration purpose only and may differ from the actual module. For authentic appearance and label, please refer to the module received from Quectel.

8 Storage, Manufacturing and Packaging

8.1. Storage Conditions

The module is provided with vacuum-sealed packaging. MSL of the module is rated as 3. The storage requirements are shown below.

1. Recommended Storage Condition: the temperature should be $23 \pm 5^{\circ}\text{C}$ and the relative humidity should be 35–60 %.
2. Shelf life (in a vacuum-sealed packaging): 12 months in Recommended Storage Condition.
3. Floor life: 168 hours ¹⁵ in a factory where the temperature is $23 \pm 5^{\circ}\text{C}$ and relative humidity is below 60 %. After the vacuum-sealed packaging is removed, the module must be processed in reflow soldering or other high-temperature operations within 168 hours. Otherwise, the module should be stored in an environment where the relative humidity is less than 10 % (e.g., a dry cabinet).
4. The module should be pre-baked to avoid blistering, cracks and inner-layer separation in PCB under the following circumstances:
 - The module is not stored in Recommended Storage Condition;
 - Violation of the third requirement mentioned above;
 - Vacuum-sealed packaging is broken, or the packaging has been removed for over 24 hours;
 - Before module repairing.
5. If needed, the pre-baking should follow the requirements below:
 - The module should be baked for 8 hours at $120 \pm 5^{\circ}\text{C}$;
 - The module must be soldered to PCB within 24 hours after the baking, otherwise it should be put in a dry environment such as in a dry cabinet.

¹⁵ This floor life is only applicable when the environment conforms to *IPC/JEDEC J-STD-033*. It is recommended to start the solder reflow process within 24 hours after the package is removed if the temperature and moisture do not conform to, or are not sure to conform to *IPC/JEDEC J-STD-033*. Do not unpack the modules in large quantities until they are ready for soldering.

NOTE

1. To avoid blistering, layer separation and other soldering issues, extended exposure of the module to the air is forbidden.
2. Take out the module from the package and put it on high-temperature-resistant fixtures before baking. If shorter baking time is desired, see *IPC/JEDEC J-STD-033* for the baking procedure.
3. Pay attention to ESD protection, such as wearing anti-static gloves, when touching the modules.

8.2. Manufacturing and Soldering

Push the squeegee to apply the solder paste on the surface of stencil, thus making the paste fill the stencil openings and then penetrate to the PCB. Apply proper force on the squeegee to produce a clean stencil surface on a single pass. To guarantee module soldering quality, the thickness of stencil for the module is recommended to be 0.15–0.18 mm. For more details, see **document [3]**.

The recommended peak reflow temperature should be 235–246 °C, with 246 °C as the absolute maximum reflow temperature. To avoid damage to the module caused by repeated heating, it is recommended that the module should be mounted only after reflow soldering for the other side of PCB has been completed. The recommended reflow soldering thermal profile (lead-free reflow soldering) and related parameters are shown below.

Figure 42: Recommended Reflow Soldering Thermal Profile

Table 65: Recommended Thermal Profile Parameters

Factor	Recommended Value
Soak Zone	
Ramp-to-soak slope	0–2 °C/s
Soak time (between A and B: 150 °C and 200 °C)	70–120 s
Reflow Zone	
217–235 °C ramp-up slope	0–1 °C/s
Reflow time (D: over 217°C)	40–65 s
Max temperature	235–246 °C
235–217 °C cool-down slope	-1–0 °C/s
Reflow Cycle	
Max reflow cycle	1

NOTE

1. The above profile parameter requirements are for the measured temperature of the solder joints. Both the hottest and coldest spots of solder joints on the PCB should meet the above requirements.
2. Due to the large-size form factor, to avoid excessive temperature change, which may cause excessive thermal deformation of the metal shielding frame and cover, it is recommended to reduce the ramp-up and cool-down slopes in the liquid phase of the solder paste. If possible, please choose a reflow oven with more than 10 temperature zones during production so that there are more temperature zones to set up to meet the optimal temperature curve.
3. If a conformal coating is necessary for the module, do NOT use any coating material that may chemically react with the PCB or shielding cover, and prevent the coating material from flowing into the module.
4. Avoid using ultrasonic technology for module cleaning since it can damage crystals inside the module.
5. Due to the complexity of the SMT process, please contact Quectel Technical Support in advance for any situation that you are not sure about, or any process (e.g. selective soldering, ultrasonic soldering) that is not mentioned in **document [3]**.

8.3. Packaging Specification

This chapter describes only the key parameters and process of packaging. All figures below are for reference only. The appearance and structure of the packaging materials are subject to the actual delivery.

The module adopts injection tray packaging and details are as follow:

8.3.1. Injection Tray

Dimension details are as follow:

Figure 43: Injection Tray Dimension Drawing

8.3.2. Packaging Process

Each injection tray packs 8 modules. Stack 10 injection trays with modules together, and put 1 empty injection tray on the top.

Packing 11 injection trays together. Place 1 humidity indicator card and 1 desiccant bag on the top of injection tray, then put 2 EPE on the top and bottom of injection tray.

Put injection trays protected by EPE into vacuum bag, vacuumize it. Put the vacuum-packed injection trays into the pizza box. 1 pizza box can pack 80 modules.

Put 2 packaged pizza boxes into 1 carton box and then seal it. 1 carton box can pack 160 modules.

Abbreviation	Description
AMR	Adaptive Multi-Rate
BDS	BeiDou Navigation Satellite System
BLE	Bluetooth Low Energy
bps	Bytes per second
BPSK	Binary Phase Shift Keying
BR	Basic Rate
CDMA	Code Division Multiple Access
CEP	Circular Error Probable
CPE	Customer-Premise Equipment
CPU	Central Processing Unit
CS	Coding Scheme
CSI	Camera Serial Interface

CTS	Clear To Send
DBS	Dual Band Simultaneous
DCE	Data Communications Equipment
DCS	Data Coding Scheme
DMIC	Digital Microphone
DRX	Discontinuous Reception
DSI	Display Serial Interface
DTE	Data Terminal Equipment
EDR	Enhanced Data Rate
EFR	Enhanced Full Rate
EPE	Expandable Polyethylene
EGSM	Enhanced GSM
eSCO	Extended Synchronous Connection Oriented
ESD	Electrostatic Discharge
ESR	Equivalent Series Resistance
ETSI	European Telecommunications Standards Institute
EVB	Evaluation Board
EVDO	Evolution-Data Optimized
FDD	Frequency Division Duplexing
FHD	Full High Definition
FR	Full Rate
Galileo	Galileo Satellite Navigation System (EU)
GLONASS	Global Navigation Satellite System (Russia)
GND	Ground
GNSS	Global Navigation Satellite System

GPIO	General-Purpose Input/Output
GPRS	General Packet Radio Service
GPS	Global Positioning System
GPU	Graphics Processing Unit
GSM	Global System for Mobile Communications
HPUE	High Power User Equipment
