FCC ID: XO8-917TX

According to KDB 447498 D01 General RF Exposure Guidance v06 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *·[√f(GHz)] ≤ 3.0

The tune-up power is -6.0 dBm +/- 0.5dB, therefore the highest tune-up power is -5.5 dBm (0.28 mW) @ 917 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

(0.28mW / 5mm) * (0.917GHz ^0.5)= 0.1

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [√f(GHz)] = 0.1 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.

Note:

1. The tune up power referred the AVG power of the test report TMTN2207000954NR for SAR test exclusion purpose.
