

According to 447498 D04 Interim General RF Exposure Guidance v01 section 2.1.2, the available maximum time-average power not exceeding 1 mW is exempt from the test.

Max. Average Electric Field: 64.07 dB μ V/m@3m
Max.Average EIRP power: -31.16 dBm

Antenna gain: -17.69 dBi.
Max. Average power:-31.16-(-17.69)=-13.47 dBm
Max. Tune-up power:-13 dBm=0.05 mW

This product is exempt from testing because its maximum time-averaged power does not exceed 1 mW.

Note:

The Max. tune-up power is determined based on the average electric field strength reported in test report TMTN2510001136NR for the purpose of test exclusion.
