FCC ID: XOX-ZP100
Product Name: zPay ("Product")

Addendum to Request for Confidentiality

It is our understanding that the internal photos in the accompanying submission may be held confidential long term under special conditions. Because the Product is used for facilitating credit card payments it requires various security measures to protect against the unauthorized access to such data. Accordingly, we have designed in features that we would prefer not be disclosed publicly. These features include: a printed security mesh on the underside of our plastic enclosure, and tamper post footprints for intrusion detection on the board that can be used to detect unauthorized entry. Internal photos may offer clues to help determine how these features are implemented and how they might be defeated. It is for these reasons that we respectfully request that such internal photographs remain protected from the public.

Moreover, the payment module incorporated into the Product is itself a sealed unit; the two halves of the plastic enclosure are ultrasonically welded together with the PCB contained inside. There are no user accessible components inside the Product. Because opening the Product renders it inoperable, we do not anticipate any sort of servicing of the Product by any personnel, trained, professional or otherwise. All failing devices will be returned to the factory for refurbishment or disposal.

Therefore, we request that the internal photographs of the Product be held confidential in order to protect sensitive and proprietary information.
