5 Observations and comments

The EUT was able to transmit or receive continuously on one out of three channels.

Furthermore the EUT was able to operate in normal (intermittent) mode.

FCC part15 section 15.215: not tested

The EUT is deemed to meet the requirements because of the frequency space between the band edges and the lowest and highest operating channels.

6 Modifications to the sample

No modifications are made to the sample.

7 Summary

The product is intended for use in the following application area(s):

Test results :

Worst case controller duty cycle in 100 ms is when communicating with a low power (LPM) actuator where a preamble frame are sent each ms for 510 ms. Each preamble frame has a length of 11 bytes (88 bit), which gives a transmission time of; $88 \text{ bit}/250\text{kbps} = 352 \mu\text{s}$. In 1 ms this equals a duty cycle of $352 \mu\text{s}/1 \text{ ms} = 35.2 \%$

In RF power this gives the following difference in dB between peak and average:
 $20 \log_{10} 0.352 = -9.0 \text{ dB}$
