Test Result

The requirements of the tests performed as shown in the overview (clause 4) were fulfilled by the equipment under test. The complete test results are presented in the following.
“Passed” indicates that the equipment under test conforms with the relevant limits of the testing standard without taking any measurement uncertainty into account as stated in clause 10.2.8.2 of ANSI C63.4 (2014). However, the measurement uncertainty is calculated and shown in this test report.

1.3 Test Laboratory

The tests were carried out by: **PHOENIX TESTLAB GmbH**
Königswinkel 10
32825 Blomberg
Germany

Accredited by Deutsche Akkreditierungsstelle GmbH (DAkkS) in compliance with DIN EN ISO/IEC 17025 under Reg. No. D-PL-17186-01-05 and D-PL-17186-01-06 , FCC Test Firm Designation Number DE0004, FCC Test Firm Registration Number 469623, CAB Identifier DE0003 and ISED# 3469A.

1.4 EUT (Equipment under Test)

Test object: *	Ellab TrackView Pro Access Point - 915 MHz
Model name: *	TrackView Pro Access Point
Model number: *	33002741
Order number: *	N/A
FCC ID: *	XUS-TVPAP1
IC certification number: *	8758A-TVPAP1
PMN: *	TrackView Pro Access Point
HVIN: *	66315000
FVIN: *	N/A
Serial number: *	80877831
PCB identifier: *	610000129-06
Hardware version: *	N/A
Software version: *	N/A

* Declared by the applicant

One EUT was used for all tests.

Note: PHOENIX TESTLAB GmbH does not take samples. The samples used for tests are provided exclusively by the applicant.

1.5 Technical Data of Equipment

General EUT data			
Power supply EUT: *	Dedicated AC/DC adaptor or PoE		
Supply voltage EUT (with AC/DC adaptor): *	U _{nom} = 120 V _{AC}	U _{min} = 100 V _{AC}	U _{max} = 240 V _{AC}
Supply voltage EUT (with PoE): *	U _{nom} = 48 V _{DC}	U _{min} = 36 V _{DC}	U _{max} = 57 V _{DC}
Temperature range: *	-20°C to +60°C		
Lowest / highest internal clock frequency: *	32.768 kHz / 927.5 MHz		

*: Declared by the applicant

Ports / Connectors				
Identification	Connector		Length during test	Shielding (Yes / No)
	EUT	Ancillary		
Power in	2.1 mm DC power socket	-	3.0 m	No
Ethernet (with PoE)	RJ45	RJ45	3.0 m	Yes
USB (service interface only)	USB type B	USB type A	3.0 m	Yes
Relay output	MDC-036-R	-	Not used	-
Relay output	MDC-036-R	-		-

LoRa frequencies

Channel 68	909.4 MHz	Channel 69	911.0 MHz
Channel 70	912.6 MHz	Channel 71	914.2 MHz
Channel (8)0	923.3 MHz	Channel (8)1	923.9 MHz
Channel (8)2	924.5 MHz	Channel (8)3	925.1 MHz
Channel (8)4	925.7 MHz	Channel (8)5	926.3 MHz
Channel (8)6	926.9 MHz	Channel (8)7	927.5 MHz

LoRa radio mode		
Fulfil radio specification: *1	LoRa WAN	
Radio chip: *1	SEMTECH SX1276	
Antenna type: *1	Internal screw type antenna for each transmitter	
Antenna name: *1	Adactus ADA-901-868-925	
Antenna gain: *2	-13.8 dBd	
Antenna connector: *1	Internal UFL	
Type of modulation: *1	LoRa WAN	LoRa-CSS
Operating frequency range: *1	LoRa WAN	903.0 – 927.5 MHz
Number of channels: *1	LoRa WAN	16

*1: Declared by the applicant

*2: Based on the antenna test as documented under PHOENIX TESTLAB GmbH test report reference F221512E3.

1.5.1 Ancillary Equipment / Equipment used for testing

Equipment used for testing	
Laptop: *1	Type Lenovo 20KH-006FMD18/08 with software Trackview Pro Link
AC/DC adaptor (dedicated) *1	Ideal power model DYS818-120150W

*1: Provided by the applicant

1.6 Dates

Date of receipt of test sample:	02.02.2023
Start of test:	21.02.2023
End of test:	06.03.2023

2 Operational States

Description of function of the EUT:

The EUT is a gateway for multiple data loggers to data to a cloud-based software solution. It contains two transceivers with internal antennas, operating independent from each other.

The following states were defined as the operating conditions:

- The EUT is a running in normal operation mode, data transfer on the Ethernet line was realized with fping from the laptop PC.
- The EUT is a running in service mode, data transfer on the USB line with the laptop PC.
- Receive with transceiver A.
- Receive with transceiver B.

If not otherwise stated, during the tests the EUT was supplied with 12 V_{DC} by the dedicated AC/DC adaptor, which was supplied by an AC mains network with 120 V_{AC} / 60 Hz.

3 Additional Information

The results of the transmitters are documented under PHONIX TESTLAB GmbH test report reference F221512E3.

The EUT was not labeled as required by FCC / IC.

4 Overview

Conducted emissions FCC 47 CFR Part 15 section 15.107 (a), (b) [3] ICES-003 Issue 7 section 3.2.1[4]				
Application	Frequency range	Limits	Reference standard	Status
AC supply line Class B	0.15 to 0.5 MHz	66 to 56 dB(μV) QP* 56 to 46 dB(μV) AV*	ANSI C63.4	Passed
	0.5 to 5 MHz	56 dB(μV) QP 46 dB(μV) AV		
	5 to 30 MHz	60 dB(μV) QP 50 dB(μV) AV		
*: Decreases with the logarithm of the frequency				

Radiated emissions FCC 47 CFR Part 15 section 15.109 (a), (b) [3] FCC 47 CFR Part 15 section 15.111 [3] RSS-Gen 7.3 [5]				
Application	Frequency range	Limits	Reference standard	Status
Radiated Emission Class B	30 to 88 MHz	40.0 dB(μV/m) QP at 3 m	ANSI C63.4	Passed
	88 to 216 MHz	43.5 dB(μV/m) QP at 3 m		
	216 to 960 MHz	46.0 dB(μV/m) QP at 3 m		
	960 to 1000 MHz	54.0 dB(μV/m) QP at 3 m		
	above 1000 MHz	54.0 dB(μV/m) AV at 3 m and 74.0 dB(μV/m) PK at 3 m		

Radiated emissions ICES-003 Issue 7 section 3.2.2 [4]				
Application	Frequency range	Limits	Reference standard	Status
Radiated Emission Class B	30 to 88 MHz	40.0 dB(μV/m) QP at 3 m	ANSI C63.4	Passed
	88 to 216 MHz	43.5 dB(μV/m) QP at 3 m		
	216 to 230 MHz	46.0 dB(μV/m) QP at 3 m		
	230 to 960 MHz	47.0 dB(μV/m) QP at 3 m		
	960 to 1000 MHz	54.0 dB(μV/m) QP at 3 m		
	above 1000 MHz	54 dB(μV/m) AV at 3 m and 74 dB(μV/m) PK at 3 m		

Remark: As declared by the applicant the highest internal clock frequency is 0.928 GHz.
Therefore the radiated emission measurement must be carried out up to 5th of the highest internal clock frequency in this case 5 GHz.

The EUT was classified by the applicant as CLASS B equipment.

5 Results

5.1 Test setups

5.1.1 Radiated: 30 MHz to 1 GHz

5.1.1.1 Preliminary and final measurement 30 MHz to 1 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber with a metal ground plane at a measuring distance of 3 meters. Table-top devices are set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices are placed directly on the turntable / ground plane. The setup of the equipment under test is in accordance with [1].

During the tests the EUT is rotated in the range of 0 ° to 360 °, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI receiver is set to the following values:

Test	Frequency range	Step-size	Resolution bandwidth	Measuring time	Detector
Preliminary measurement	30 MHz to 1 GHz	30 kHz	120 kHz	-	Peak Average
Frequency peak search	± 120 kHz	10 kHz	120 kHz	1 s	Peak
Final measurement	30 MHz to 1 GHz	-	120 kHz	1 s	QuasiPeak

Procedure preliminary measurement:

The following procedure is used:

- 1) Set the measuring antenna to 1 m height.
- 2) Monitor the frequency range at horizontal polarization of the measuring antenna and an EUT / turntable azimuth of 0 °.
- 3) Rotate the EUT by 360° to maximize the detected signals.
- 4) Repeat steps 2 to 3 with the vertical polarization of the measuring antenna.
- 5) Increase the height of the measuring antenna for 0.5 m and repeat steps 2 to 4 until the final height of 4 m is reached.
- 6) The highest values for each frequency are saved by the software, including the measuring antenna height and polarization and the turntable azimuth for that value.

Procedure final measurement:

The following procedure is used:

- 1) Select the highest frequency peaks (lowest margin to the limit) for the final measurement.
- 2) The software determines the exact peak frequencies by doing a partial scan with reduced step size of the pre-scan of the selected peaks.
- 3) If the EUT is portable or ceiling mounted, find the worst-case EUT orientation (x,y,z) for the final test.
- 4) The worst-case measuring antenna height is found via varying the height by +/- 0.5 m from the value obtained in the preliminary measurement while monitoring the emission level.
- 5) The worst-case turntable position is found via varying the turntable azimuth by +/- 30° from the value obtained in the preliminary measurement while monitoring the emission level.
- 6) The final measurement is performed at the worst-case measuring antenna height and the worst-case turntable azimuth.
- 7) Steps 2 to 6 are repeated for each frequency peak selected in step 1.

5.1.2 Radiated: 1 GHz to 40 GHz

5.1.2.1 Preliminary and final measurement 1 to 40 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber at a measuring distance of 3 meters, with floor absorbers between EUT and measuring antenna. Table-top devices are set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices are placed directly on the turntable / ground plane. The setup of the equipment under test is in accordance with [1].

During the tests the EUT is rotated in the range of 0 ° to 360 °, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions. While changing the height, the measuring antenna gets tilted so that it is always aiming at the EUT.

The resolution bandwidth of the EMI receiver is set to the following values:

Test	Frequency range	Step-size	Resolution bandwidth	Measuring time	Detector
Preliminary measurement	1 - 40 GHz	250 kHz	1 MHz	-	Peak Average
Frequency peak search	+ / - 1 MHz	50 kHz	1 MHz	100 ms	Peak
Final measurement	1 - 40 GHz	-	1 MHz	100 ms	Peak Average

Procedure preliminary measurement:

The following procedure is used:

- 1) Set the measuring antenna to 1 m height.
- 2) Monitor the frequency range at horizontal polarization of the measuring antenna and an EUT / turntable azimuth of 0 °.
- 3) Rotate the EUT by 360° to maximize the detected signals.
- 4) Repeat steps 2 to 3 with the vertical polarization of the measuring antenna.
- 5) Increase the height of the measuring antenna for 0.5 m and repeat steps 2 to 4 until the final height of 4 m is reached.
- 6) The highest values for each frequency are saved by the software, including the measuring antenna height and polarization and the turntable azimuth for that value.

Procedure final measurement:

The following procedure is used:

- 1) Select the highest frequency peaks (lowest margin to the limit) for the final measurement.
- 2) The software determines the exact peak frequencies by doing a partial scan with reduced step size of the pre-scan of the selected peaks.
- 3) If the EUT is portable or ceiling mounted, find the worst-case EUT orientation (x,y,z) for the final test.
- 4) The worst-case measuring antenna height is found via varying the height by +/- 0.5 m from the value obtained in the preliminary measurement while monitoring the emission level.
- 5) The worst-case turntable position is found via varying the turntable azimuth by +/- 30° from the value obtained in the preliminary measurement while monitoring the emission level.
- 6) The final measurement is performed at the worst-case measuring antenna height and the worst-case turntable azimuth.
- 7) Steps 2 to 6 are repeated for each frequency peak selected in step 1.

5.1.3 Conducted: AC power line

The test is carried out in a shielded chamber. Table-top devices are set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm above the ground plane. Floor-standing devices are placed directly on the ground plane. In case of DC powered equipment, which is not exclusively powered by a battery, it is connected to the LISN via a suitable AC/DC adaptor. The setup of the equipment under test is in accordance with [1].

The frequency range 150 kHz to 30 MHz is measured with an EMI receiver set to MAX hold mode with Peak and Average detectors and a resolution bandwidth of 9 kHz. A scan is carried out on the phase and neutral line of the AC mains network. If emissions less than 10 dB below the appropriate limit are detected, these emissions are measured with an Average and Quasi-Peak detector on all lines.

Frequency range	Resolution bandwidth	Measuring time
150 kHz to 30 MHz	9 kHz	5 s

5.2 Radiated emissions

5.2.1 Test setup (Maximum unwanted emissions)

Test setup (Maximum unwanted emissions)			
Used	Setup	See sub-clause	Comment
☒	Radiated: 30 MHz to 1 GHz / 1 GHz to 40 GHz	5.1.1 / 5.1.2	Tested in dedicated position (wall mounted EUT)

5.2.2 Test method (Maximum unwanted emissions)

☒ Test method (radiated) see sub-clause 5.1.1 / 5.1.2 as described here in

5.2.3 Test results (Maximum unwanted emissions)

5.2.3.1 Test results (30 MHz – 1 GHz)

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	21.02.2023
Tested by:	Th. KÜHN

Position of EUT: For tests for f between 30 MHz to 1 GHz, the EUT was set-up on a table with a height of 80 cm. The distance between EUT and antenna was 3 m.

Cable guide: For detail information of test set-up and the cable guide refer to the pictures in the annex A in the test report.

Remark: The EUT was only tested in the dedicated position (wall mounted – see test setup photographs).

Calculations:

Result [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Correction [dB/m] = AF [dB/m] + Cable attenuation [dB] + optional preamp gain [dB]

Margin [dB] = Limit [dBμV/m] - Result [dBμV/m]

The measured points and the limit line in the following diagram refer to the standard measurement of the emitted interference in compliance with the above-mentioned standard. The measured points marked with “◆” are the measured results of the standard subsequent measurement in a semi-anechoic chamber.

Spurious emissions from 30 MHz to 1 GHz (fping, supplied by dedicated AC/DC adaptor):

Result table (fping, supplied by dedicated AC/DC adaptor):

Frequency [MHz]	Result (QP) [dBµV/m]	Limit [dBµV/m]	Margin [dB]	Readings [dBµV]	Correction [dB/m]	Height [cm]	Azimuth [deg]	Pol. (H/V)

1 – 10

5.2.3.2 Test results (radiated 1 GHz to 5 GHz)

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	21.02.2023
Tested by:	Th. KÜHN

Position of EUT: For tests for f between 1 GHz and the 5th harmonic, the EUT was set-up on a table with a height of 80 cm. The distance between EUT and antenna was 3 m.

Cable guide: For detail information of test set-up and the cable guide refer to the pictures in the annex A in the test report.

Remark: The EUT was only tested in the dedicated position (wall mounted – see test setup photographs).

Calculation:

Max Peak [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Average [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Correction [dB/m] = AF [dB/m] + Cable attenuation [dB] + optional preamp gain [dB] + DCCF* [dB]
* (if applicable – only for Average values, that are fundamental related)

Margin [dB] = Limit [dBμV/m] – Max Peak | Average [dBμV/m]

The curves in the diagram only represent the maximum measured value for each frequency point of all preliminary measurements, which were carried out with various EUT and antenna positions.

The top measured curve represents the peak measurement. The measured points marked with "◆" are frequency points for the final peak detector measurement. These values are indicated in the following table. The bottom measured curve represents the average measurement. The measured points marked with "◇" are frequency points for the final average detector measurement.

5.3 Antenna power for receivers

5.3.1 Test setup (Antenna power for receivers)

Test setup (Maximum unwanted emissions)			
Used	Setup	See sub-clause	Comment
☒	Radiated: 30 MHz to 1 GHz / 1 GHz to 5 GHz	5.1.1 / 5.1.2	-
☐	Conducted: Antenna port	-	-

5.3.2 Test method (Antenna power for receivers)

- ☒ As described in [1] §15.111, [5] 7.5

5.3.3 Test results (Antenna power for receivers)

5.3.3.1 Test results (30 MHz – 1 GHz)

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	21.02.2023
Tested by:	Th. KÜHN

Position of EUT: For tests for f between 30 MHz to 1 GHz, the EUT was set-up on a table with a height of 80 cm. The distance between EUT and antenna was 3 m.

Cable guide: For detail information of test set-up and the cable guide refer to the pictures in the annex A in the test report.

Remark: The EUT was only tested in the dedicated position (wall mounted – see test setup photographs).

Calculations:

Result [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Correction [dB/m] = AF [dB/m] + Cable attenuation [dB] + optional preamp gain [dB]

Margin [dB] = Limit [dBμV/m] - Result [dBμV/m]

The measured points and the limit line in the following diagram refer to the standard measurement of the emitted interference in compliance with the above-mentioned standard. The measured points marked with “♦” are the measured results of the standard subsequent measurement in a semi-anechoic chamber.

Spurious emissions from 30 MHz to 1 GHz (receive with receiver A):

Result table (receive with receiver A):

Frequency [MHz]	Result (QP) [dBμV/m]	Limit [dBμV/m]	Margin [dB]	Readings [dBμV]	Correction [dB/m]	Height [m]	Azimuth [deg]	Pol. (H/V)

Test equipment (please refer to chapter 7 for details)

1 – 10

5.3.3.2 Test results (radiated 1 GHz to 5 GHz)

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	21.02.2023
Tested by:	Th. KÜHN

Position of EUT: For tests for f between 1 GHz and the 5th harmonic, the EUT was set-up on a table with a height of 80 cm. The distance between EUT and antenna was 3 m.

Cable guide: For detail information of test set-up and the cable guide refer to the pictures in the annex A in the test report.

Remark: The EUT was only tested in the dedicated position (wall mounted – see test setup photographs).

Calculation:

Max Peak [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Average [dBμV/m] = Reading [dBμV] + Correction [dB/m]

Correction [dB/m] = AF [dB/m] + Cable attenuation [dB] + optional preamp gain [dB] + DCCF* [dB]
* (if applicable – only for Average values, that are fundamental related)

Margin [dB] = Limit [dBμV/m] – Max Peak | Average [dBμV/m]

The curves in the diagram only represent the maximum measured value for each frequency point of all preliminary measurements, which were carried out with various EUT and antenna positions.

The top measured curve represents the peak measurement. The measured points marked with "◆" are frequency points for the final peak detector measurement. These values are indicated in the following table. The bottom measured curve represents the average measurement. The measured points marked with "◇" are frequency points for the final average detector measurement.

Spurious emissions from 1 GHz to 5 GHz (receive with receiver A):

No final measurement was carried out because the peak level is already below average limit.

Test result: Passed

Test equipment (please refer to chapter 7 for details)

1 – 8, 11, 12

Spurious emissions from 1 GHz to 5 GHz (receive with receiver B):

No final measurement was carried out because the peak level is already below average limit.

Test result: Passed

Test equipment (please refer to chapter 7 for details)
1 – 8, 11, 12

5.4 AC power-line conducted emissions

5.4.1 Test setup (AC power-line conducted emissions)

Test setup (Conducted emissions on power supply lines)			
Used	Setup	See sub-clause	Comment
☒	Conducted: AC power line	5.1.3	-
☐	Not applicable, because ...	-	-

5.4.2 Test method (AC power-line conducted emissions)

Test setup (Conducted emissions on power supply lines)				
Used	Clause [1]	Name of method	Sub-clause	Comment
☒	6.2	Tabletop equipment testing	5.1.3	-
☐	6.2	Floor-standing equipment testing	-	-

Because the EUT could be supplied either by the dedicated AC/DC adaptor or via PoE, both variants were tested. The EUT was supplied either by the dedicated AC/DC adaptor Ideal power model DYS818-120150W or by an PoE injector type PowerDesine 3001. Additionally, the EUT was tested in service mode, where a USB communication was done between the EUT and the laptop PC – for this test case the measurement was carried out on the AC/DC adaptor of the laptop PC. All devices were supplied by an AC mains network with 120V_{AC} 60Hz.

5.4.3 Test results (AC power-line conducted emissions, supplied by dedicated AC/DC adaptor)

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	22.02.2022
Tested by:	Th. KÜHN

The dedicated AC/DC adaptor provided by the applicant was used for the tests.

The curves in the diagrams below only represent for each frequency point the maximum measured value of all preliminary measurements which were made for each power supply line. The top measured curve represents the peak measurement and the bottom measured curve the average measurement. The quasi-peak measured points are marked by ◆ and the average measured points by ◆.

Frequency [MHz]	QuasiPeak [dB(µV)]	Average [dB(µV)]	Limit [dB(µV)]	Margin [dB]	Line	PE	Corr. [dB]
0.150000	43.8	---	66.0	22.2	N	GND	9.8
