ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC CFR 47 Part 15 and RSS-210. The sample tested was found to comply with the requirements defined in the applied rules.

Test Engineers;

R A Blagg

G Lawler

This test report has be up issued to Issue 2 make changes to the Industry Canada ID and to change the issue date of the FCC Part 15 used.

REPORT SUMMARY

FCC and Industry Canada Testing of the
Sepura plc STP8040 Portable Tetra Radio
In accordance with FCC CFR 47 Part 15 and RSS-210

Product Service

1.1 INTRODUCTION

The information contained in this report is intended to show verification of the FCC and Industry Canada Testing of the Sepura plc, STP8040 Portable Tetra Radio to the requirements of FCC CFR 47 Part 15 and RSS-210.

Objective	To perform FCC and Industry Canada Testing to determine the Equipment Under Test's (EUT's) compliance with the Test Specification, for the series of tests carried out.
Manufacturer	Sepura plc
Model Number(s)	STP8040 Portable Tetra Radio
Serial Number(s)	2PN400922G4Y1P5
Number of Samples Tested	One
Test Specification/Issue/Date	FCC CFR 47 Part 15: 2007 RSS-210: Issue 7: 2007
Disposal	Held Pending Disposal
Reference Number	Not Applicable
Date	Not Applicable
Order Number	315350/T0201
Date	19 November 2009
Start of Test	10 December 2009
Finish of Test	05 January 2010
Name of Engineer(s)	R A Blagg G Lawler
Related Document(s)	ANSI 63.4 : 2003

Testing in this report is referenced to FCC CFR 47 Part 15: 2009. At the time of testing the 2009 version was not on our Schedule of Accreditation, the clauses tested have been assessed against the 2007 version and there are no changes to the testing performed therefore the testing meets the requirements of the 2009 version.

Product Service

1.2 BRIEF SUMMARY OF RESULTS

A brief summary of the tests carried out in accordance with FCC CFR 47 Part 15 and RSS-210 is shown below.

Section	Spec Clause		Test Description	Mode	Result	Comments
	FCC	IC				
2.1	15.247 (a)(1)	A8.1(a)	20dB Bandwidth	Transmit Bottom	Pass	
				Transmit Middle	Pass	
				Transmit Top	Pass	
2.2	15.247 (b)(3)	A8.4(2)	Maximum Peak Conducted Output Power	Transmit Bottom	Pass	
				Transmit Middle	Pass	
				Transmit Top	Pass	
2.3	15.247 (b)(3)	A8.4(2)	EIRP Peak Power	Transmit Bottom	Pass

Note: This document has been prepared to enable manufacturers with no mechanism for producing their own Declaration of Build Status, to declare the build state of the equipment submitted for test.

No responsibility will be accepted by TÜV Product Service as to the accuracy of the information declared in this document by the manufacturer.

1.4 PRODUCT INFORMATION

1.4.1 Technical Description

The Equipment Under Test (EUT) was a Sepura plc, STP8040 Portable Tetra Radio as shown in the photograph below. A full technical description can be found in the manufacturer's documentation.

Equipment Under Test

Product Service

1.4.2 Test Configuration

Configuration 1: Stand Alone Powered

The EUT was configured as a standalone item and powered via a 7.4 V battery.

1.4.3 EUT Cable / Port Identification

Port	Max Cable Length specified	Usage	Type	Screened
Signal	1.0m	Fist Microphone	Multicore	No

1.4.4 Modes of Operation

Modes of operation of each EUT during testing were as follows:

Mode 1 – 2402 MHz Transmit Bottom

Mode 2 – 2441 MHz Transmit Middle

Mode 3 – 2480 MHz Transmit Top

Information on the specific test modes utilised are detailed in the test procedure for each individual test.

Product Service

1.5 TEST CONDITIONS

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure, test laboratories or an open test area as appropriate.

The EUT was powered via a 7.4 V battery.

FCC Accreditation
90987 Octagon House, Fareham Test Laboratory

Industry Canada Accreditation
IC2932B-1 Octagon House, Fareham Test Laboratory

1.6 DEVIATIONS FROM THE STANDARD

No deviations from the applicable test standards or test plan were made during testing.

1.7 MODIFICATION RECORD

No modifications were made to the EUT during testing.

Product Service

SECTION 2

TEST DETAILS

FCC and Industry Canada Testing of the
Sepura plc STP8040 Portable Tetra Radio
In accordance with FCC CFR 47 Part 15 and RSS-210

Product Service

2.1 20dB BANDWIDTH

2.1.1 Specification Reference

FCC CFR 47 Part 15, Clause 15.247 (a)(1)
RSS-210, Clause A8.1(a)

2.1.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.1.3 Date of Test and Modification State

10 December 2009 - Modification State 0

2.1.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.1.5 Test Procedure

Test Performed in accordance with FCC CFR 47 Part 15 and RSS-210.

The EUT was transmitted at maximum power at all data rates via a cable to the Spectrum Analyser. The Analyser settings were adjusted to display the resultant trace on screen. The peak point of the trace was measured and the markers positioned to give the –20dBc points of the displayed spectrum.

2.1.6 Environmental Conditions

10 December 2009

Ambient Temperature 23.9°C

Relative Humidity 32.4%

Limit Clause

15.247 (b)(1) for FCC

The maximum peak conducted output power of the intentional radiator shall not exceed the following:

For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts.

A8.4 (2) for RSS-210

For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 hopping channels, the maximum peak conducted output power shall not exceed 1 W; for all other frequency hopping systems in the band, the maximum peak conducted output power shall not exceed 0.125 W. Except as provided in Section A8.4(5), the e.i.r.p shall not exceed 4W.

Product Service

2.3 EIRP PEAK POWER

2.3.1 Specification Reference

FCC CFR 47 Part 15C, Clause 15.247 (b)(3)
RSS-210, Clause A8.4(4)

2.3.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.3.3 Date of Test and Modification State

04 to 05 January 2010 - Modification State 0

2.3.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.3.5 Test Method and Operating Modes

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 15C and RSS-210.

The test was performed with the EUT in the following configurations and modes of operation:

Configuration 1 - Mode 1
 - Mode 2
 - Mode 3

2.3.6 Environmental Conditions

	04 January 2010	05 January 2010
Ambient Temperature	16°C	16°C
Relative Humidity	29%	29%
Atmospheric Pressure	1013mbar	1013mbar

Product Service

2.3.7 Test Results

For the period of test the EUT met the requirements of FCC CFR 47 Part 15C and RSS-210 for EIRP Peak Power.

The test results are shown below.

Configuration 1 - Mode 1

Frequency GHz	Result (dBm)	FCC Limit (dBm)	IC Limit (dBm)	Result (W)	FCC Limit (W)	IC Limit (W)
2.402	-2.0	30	36	0.001	1	4

2.4 SPURIOUS EMISSIONS

2.4.1 Specification Reference

FCC CFR 47 Part 15, Clause 15.247 (d)
RSS-210, Clause A8.5

2.4.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.4.3 Date of Test and Modification State

14 December 2009 - Modification State 0

2.4.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.4.5 Test Procedure

Test Performed in accordance with FCC CFR 47 Part 15 and RSS-210.

In accordance with Part 15.247(c), the Spurious Conducted Emissions from the antenna terminal were measured. The transmitter output power was attenuated using a combination of filters and attenuators and the frequency spectrum investigated from 9 kHz to 25 GHz. The EUT was set to transmit on full power and frequency hopping on all channels. The resolution and video bandwidths were set to 100kHz in accordance with Part 15.247. The spectrum analyser detector was set to Max Hold.

With the EUT transmitting at maximum power, the Spectrum Analyser was set to Max Hold and the fundamental peak measured in a RBW and VBW of 100kHz. This level was used to determine the limit line as displayed on the plots of -20dBc.

The maximum path loss across each measurement band was used as the reference level offset to ensure worst case results.

2.5 CHANNEL DWELL TIME

2.5.1 Specification Reference

FCC CFR 47 Part 15, Clause 15.247 (a)(1)(iii)
RSS-210, Clause A8.1(d)

2.5.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.5.3 Date of Test and Modification State

11 December 2009 - Modification State 0

2.5.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.5.5 Test Procedure

Test Performed in accordance with FCC CFR 47 Part 15 and RSS-210.

The Bluetooth system hops at a rate of 1600 times per second. Thus, this equates to 1600 timeslots in 1 second.

The DH1 data rate operates on a Transmit on 1 timeslot and Receive on 1 timeslot basis. Thus, in 1 second, there are 800 Transmit timeslots and 800 Receive timeslots.

Thus:

$$1 \text{ Timeslot} = \frac{1}{1600} = 625\mu\text{s}$$

In 1 transmit timeslot, the transmit on time is only 405μs. 220μs is reserved as off time for the synthesizer to re-tune ready for the next transmit frequency. The following timeslot is a receive slot. This process continues assuming the data rate remains the same.

DH1 Timeslot Arrangement Showing One Complete Transmit and Receive Cycle

So, with 800 Tx and 800 Rx timeslots, the transmitter is on for $800 \times 405\mu\text{s} = 0.324$ seconds.

$$\therefore \frac{\text{Total Tx Time On}}{\text{No of Channels}} = \frac{0.324}{80} = 4.05\text{ms}$$

So, in 32 seconds, the transmitter dwell time per channel is:

$$32 \times 4.05\text{ms} = 0.1296 \text{ seconds}$$

With data rate DH3, the data payload is higher and can use up to 3 timeslots. When more than one timeslot is used, the frequency does not hop and transmission is continuous on all 3 slots, (ie. no receive slot in-between the 3 transmit slots). The 220µs off time for synthesizer re-tuning at the end of a slot is only used on the final slot. Thus, for one cycle, there are 3 transmit timeslots. 2 are 625µs long and the final slot is transmitting for 405µs.

The DH3 data rate operates on a Transmit on 3 timeslots and Receives on 1 timeslot basis, (assuming maximum data payload). The frequency-hopping rate is the same. Thus, in 1 second, there are 1200 Transmit timeslots and 400 Receive timeslots.

Thus:

$$1 \text{ Timeslot} = \frac{1}{1600} = 625\mu\text{s}$$

The first 2 Transmit timeslots are transmitting for the complete 625µs. In the third transmit slot, the transmit on time is only 405µs. 220µs is reserved as off time for the synthesizer to re-tune ready for the next transmit frequency. The following timeslot is a receive slot. This process continues assuming the data rate remains the same.

DH3 Timeslot Arrangement Showing One Complete Transmit and Receive Cycle, (Maximum Payload)

Thus, the transmitter for one complete transmit and receive cycle would be on for:

$$T_x \quad (2 \times 625\mu\text{s}) + (1 \times 405\mu\text{s}) = 1.655\text{ms}$$

So:

$$\begin{aligned} 800 \times 625\mu\text{s} &= 0.5 \text{ seconds} \\ 400 \times 405\mu\text{s} &= 0.162 \text{ seconds} \end{aligned}$$

$$\text{Thus:} \quad 0.5 + 0.162 = 0.662 \text{ seconds}$$

$$\therefore \frac{\text{Total Tx Time On}}{\text{No Of Channels}} = \frac{0.662}{80} = 8.275\text{ms}$$

So, in 32 seconds, the transmitter dwell time per channel is:

$$32 \times 8.275\text{ms} = 0.2648 \text{ seconds}$$

With data rate DH5, the data payload is higher and can use up to 5 timeslots. When more than one timeslot is used, the frequency does not hop and transmission is continuous on all 5 slots, (ie. no receive slot in-between the 5 transmit slots). The 220µs off time for synthesizer re-tuning at the end of a slot is only used on the final slot. Thus, for one cycle, there are 5 transmit timeslots. 4 are 625µs long and the final slot is transmitting for 405µs.

The DH5 data rate operates on a Transmit on 5 timeslots and Receives on 1 timeslot basis, (assuming maximum data payload). The frequency-hopping rate is the same. Thus, in 1 second, there are 1333.3 Transmit timeslots and 266.7 Receive timeslots.

Thus:

$$1 \text{ Timeslot} = \frac{1}{1600} = 625\mu\text{s}$$

The first 4 Transmit timeslots are transmitting for the complete 625µs. In the fifth transmit slot, the transmit on time is only 405µs. 220µs is reserved as off time for the synthesizer to re-tune ready for the next transmit frequency. The following timeslot is a receive slot. This process continues assuming the data rate remains the same.

DH5 Timeslot Arrangement Showing One Complete Transmit and Receive Cycle, (Maximum Payload)

Thus, the transmitter for one complete transmit and receive cycle would be on for:

$$\text{Tx} \quad (2 \times 625\mu\text{s}) + (1 \times 405\mu\text{s}) = 2.905\text{ms}$$

So:

$$\begin{aligned} 1066.7 \times 625\mu\text{s} &= 0.666 \text{ seconds} \\ 266.7 \times 405\mu\text{s} &= 0.108 \text{ seconds} \end{aligned}$$

$$\text{Thus:} \quad 0.666 + 0.108 = 0.774 \text{ seconds}$$

$$\therefore \frac{\text{Total Tx Time On}}{\text{No Of Channels}} = \frac{0.774}{80} = 9.675\text{ms}$$

So, in 32 seconds, the transmitter dwell time per channel is:

$$32 \times 9.675\text{ms} = 0.31 \text{ seconds}$$

2.6.5 Test Procedure

Test Performed in accordance with FCC CFR 47 Part 15 and RSS-210.

The EUT was transmitted at maximum power into a Spectrum Analyser. The trace was set to Max Hold to store several adjacent channels on screen. Using the marker delta function, the markers were positioned to show the separation between adjacent channels.

2.6.6 Environmental Conditions

	11 December 2009
Ambient Temperature	24.7°C
Relative Humidity	26.5%

2.6.7 Test Results

Date: 11.DEC.2009 15:31:40

Limit Clause

15.247 (a)(1) for FCC
A8.1(b) for RSS-210

Limit	>25kHz
-------	--------

Product Service

2.7 NUMBER OF HOPPING CHANNELS

2.7.1 Specification Reference

FCC CFR 47 Part 15, Clause 15.247 (a)(1)(iii)
RSS-210, Clause A8.1(d)

2.7.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.7.3 Date of Test and Modification State

11 December 2009 - Modification State 0

2.7.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

The EUT was connected to a Spectrum Analyser via a cable. The EUT was set to transmit on maximum power and hopping on all channels. The span was adjusted to show the individual channels. To reasonably display the number of channels, the occupied band was split into four traces. The display trace was set to Max Hold and the plots recorded.

2.7.5 Test Procedure

Test Performed in accordance with FCC CFR 47 Part 15 and RSS-210.

2.7.6 Environmental Conditions

11 December 2009

Ambient Temperature 24.1°C

Relative Humidity 27.1%

2.7.7 Test Results

0 to 23

Date: 11.DEC.2009 15:56:07

23 to 43

Date: 11.DEC.2009 16:00:18

43 to 63

Date: 11.DEC.2009 16:05:54

64 to 79

Date: 11.DEC.2009 16:14:58

Limit Clause

15.247 (a)(1)(iii) for FCC and A8.1(d) for RSS-210

Limit	≥75 channels

Product Service

2.8 RADIATED EMISSIONS (ENCLOSURE PORT)

2.8.1 Specification Reference

FCC CFR 47 Part 15C, Clause 15.247 (a)(2)
RSS-210, Clause A8.2(a)

2.8.2 Equipment Under Test

STP8040 Portable Tetra Radio, S/N: 2PN40092294Y10S

2.8.3 Date of Test and Modification State

05 January 2010 - Modification State 0

2.8.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.8.5 Test Method and Operating Modes

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 15C and RSS-210.

The test was performed with the EUT in the following configurations and modes of operation:

Configuration 1 - Mode 1
 - Mode 2
 - Mode 3

2.8.6 Environmental Conditions

05 January 2010

Ambient Temperature 16°C

Relative Humidity 29%

Atmospheric Pressure 1013mbar

Product Service

2.8.7 Test Results

For the period of test the EUT met the requirements of FCC CFR 47 Part 15C and RSS-210 2009 for Radiated Emissions (Enclosure Port).

The test results are shown below.

Configuration 1 - Mode 1

Frequency (MHz)	QP Level (dBuV/m)	QP Level (uV/m)	QP Limit (dBuV/m)	QP Limit (uV/m)	QP Margin (dBuV/m)	QP Margin (uV/m)	Angle (deg)	Height (m)	Polarity

3.2 MEASUREMENT UNCERTAINTY

For a 95% confidence level, the measurement uncertainties for defined systems are:-

Test Discipline	Frequency / Parameter	MU
Radiated Emissions, Bilog Antenna, AOATS	30MHz to 1GHz Amplitude	5.1dB*
Radiated Emissions, Horn Antenna, AOATS	1GHz to 40GHz Amplitude	6.3dB*
Conducted Emissions, LISN	150kHz to 30MHz Amplitude	3.2dB*
Conducted Emissions, ISN	150kHz to 30MHz Amplitude	2.1dB
Substitution Antenna, Radiated Field	30MHz to 18GHz Amplitude	2.6dB
Discontinuous Interference	150kHz to 30MHz Amplitude	3.0dB*
Interference Power	30MHz to 300MHz Amplitude	3.0dB*
Radiated E-Field Susceptibility	26MHz to 2.5GHz Test Amplitude	1.4dB†
Conducted Susceptibility	100kHz to 250MHz Amplitude	1.8dB†
DC Input Ripple Immunity	Current Voltage	0.45% 0.91%
Power Frequency Magnetic Field	50Hz/60Hz Amplitude	0.45%
Magnetic Emissions	9kHz to 30MHz Amplitude	3.4dB*
Magnetic Field/Flux iaw EN 50366	10Hz to 400kHz	2.64%
Harmonics and Flicker	The test was applied using proprietary equipment that meets the requirements of EN 61000-3-2 and EN 61000-3-3	—
Mains Voltage Variations and Interrupts	The test was applied using proprietary equipment that meets the requirements of EN 61000-4-11	—
Fast Transient Burst	The test was applied using proprietary equipment that meets the requirements of EN 61000-4-4	—
Electrostatic Discharge	The test was applied using proprietary equipment that meets the requirements of EN 61000-4-2	—
Surge	The test was applied using proprietary equipment that meets the requirements of EN 61000-4-5	—
Vehicle Transients	The test was applied using proprietary equipment that meets the requirements of ISO 7637-1 and 2	—
Compass Safe Distance	Azimuth Accuracy	0.10°

Worst case error for both Time and Frequency measurement 12 parts in 10⁶.
