The spectrum for slotted transmission shall be within the emission mask as follows:

- in the region between the carrier and ± 10 kHz removed from the carrier, the modulation and transient sidebands shall be below 0 dBc;
- at ± 10 kHz removed from the carrier, the modulation and transient sidebands shall be below -25 dBc;
- at ± 25 kHz to $\pm 62,5$ kHz removed from the carrier, the modulation and transient sidebands shall be below the lower value of -70 dBc;
- in the region between ± 10 kHz and ± 25 kHz removed from the carrier, the modulation and transient sidebands shall be below a line specified between these two points.

The reference level for the measurement shall be the carrier power (conducted) recorded for the appropriate test frequency in clause 11.1.2 of the test specification.

For information the emission mask specified above is shown below.

IEC 552/13

Figure 3 - Transmission Spectrum Mask Limit

Table 11 - Peak Frequency Deviation versus Time Limit

FCC 47 CFR Part 80, Limit Clause 80.213(d)

Radiotelephone transmitters using A3E, F3E and G3E emission must have a modulation limiter to prevent any modulation over 100 percent.

Note: There are no other specific requirements for GMSK in part 80, but modulation is within the limits specified in ITU-R M371-5 and IEC62287-2. The results above show that the signals modulation is limited within ±3400 Hz.

The power of any spurious emission on any discrete frequency shall not exceed 0,25 μ W (-36 dBm) in the frequency range 9 kHz to 1 GHz and 1 μ W (-30 dBm) in the frequency range 1 GHz to 4 GHz.

FCC 47 CFR Part 80, Limit Clause 80.211

Within 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: At least 25 dB;

On any frequency removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: At least 35 dB

More than 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least 43 plus $10\log_{10}$ (mean power in watts) dB.

Note: The IEC 62287-2, requirements, (≤ -36 dBm < 1 GHz / ≤ -30 dBm > 1 GHz), are more stringent than those in Part 80 therefore compliance with the Part 80 requirements, (≤ -13 dBm), have been demonstrated from the results recorded above.
