

7. Maximum Transmitted Peak Power Output

7.1 Test Specification

FCC Part 15, Subpart H, Section 15.709 (a)(1)

7.2 Test Procedure

The E.U.T operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator (30 dB) and an appropriate coaxial cable (cable loss = 0.3 dB). The Spectrum Analyzer was set to 100 kHz resolution BW. Peak power level was measured by power channel with 6 MHz bandwidth with a RMS detector. A sweep time of 500msec was used for 1msec per trace point.

7.3 Test Results

JUDGEMENT: Passed

For additional information see *Figure 67* to *Figure 79*.

8. Power Spectral Density

8.1 Specification

FCC Part 15, Subpart H, Section 15.709(a)(5)(i)

8.2 Test Procedure

The E.U.T operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator (30 dB) and an appropriate coaxial cable (cable loss = 0.3 dB). The Spectrum Analyzer was set to 100 kHz resolution BW. Peak power level was measured in any 100 kHz bandwidth and with an RMS detector. A sweep time of 500msec was used for 1msec per trace point.

8.3 Test Results

JUDGEMENT: Passed

For additional information see *Figure 81* to *Figure 93*.

Note: This product has a maximum PSD of 8.3 dBm (100kHz). Since the Database will allocate to the products TVWS Channels according to the 30dBm conducted power limit the PSD limit that shall apply is 12.6dBm which is met by this product.

Figure 101 Test Equipment Used

10. Radiated Emission, 9 kHz – 30 MHz

10.1 Test Specification

F.C.C. Part 15, Subpart H, Section 15.709(c)(3)

10.2 Test Procedure

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The configuration tested is shown in Figure 2.

The frequency range 9 kHz-30 MHz was scanned.

The emissions were measured using a computerized EMI receiver complying with CISPR 16 requirements. The specification limits and applicable correction factors are pre-loaded to the receiver.

In the frequency range 9 kHz-30MHz, the loop antenna was rotated on its vertical axis. The antenna height (center of loop) was 1 meter at a distance of 3 meters.

The E.U.T. was operated at the low, mid and high channels. Measurements were performed using a peak detector.

10.3 Test Results

All signals were below the receiver background noise level which is more than 6 dB below the specification limit.

JUDGEMENT: Passed

The EUT met the requirements of the F.C.C. Part 15, Subpart H, Section 15.709(c)(3) specification.

10.4 *Field Strength Calculation*

The field strength is calculated directly by the EMI Receiver software, and a "Correction Factors", using the following equation:

$$FS = RA + AF + CF$$

FS: Field Strength [dB μ V/m]
RA: Receiver Amplitude [dB μ V]
AF: Receiving Antenna Correction Factor [dB/m]
CF: Cable Attenuation Factor [dB]

Example: FS = 30.7 dB μ V (RA) + 14.0 dB (AF) + 0.9 dB (CF) = 45.6 dB μ V

No external pre-amplifiers are used.

11. Spurious Radiated Emission, 30 – 7000 MHz

11.1 Specification

FCC Part 15, Subpart H, Section 15.709(c)(3)

11.2 Radiated Emission 30-7000 MHz

The E.U.T operation mode and test set-up are as described in Section 2.

A preliminary measurement to characterize the E.U.T was performed inside the shielded room, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The configuration tested is shown in *Figure 2*.

The levels of the emissions within the frequency ranges of the restricted bands (Section 15.205 of FCC Part 15) were compared to the limits of the table in Section 15.209 (a), General Requirements.

In the frequency range 30-7000.0 MHz, a computerized EMI receiver complying with CISPR 16 requirements was used.

The test distance was 3 meters.

The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

Verification of the E.U.T emissions was based on the following methods: turning the E.U.T on and off; using a frequency span less than 10 MHz; observation of the signal level during turntable rotation. (Background noise is not affected by the rotation of the E.U.T.).

The E.U.T. was operated at the low, mid and high channels (473.0 MHz, 587.0 MHz, 695.0 MHz).

11.3 Test Results

JUDGEMENT: Passed by 1.5dB

For the operation frequency of 473.00 MHz, the margin between the emission level and the specification limit is in the worst case 5.8 dB at the frequency of 1419.0 MHz, vertical polarization.

For the operation frequency of 587.00 MHz, the margin between the emission level and the specification limit is in the worst case 1.5 dB at the frequency of 1761.0 MHz, vertical polarization.

For the operation frequency of 695.00 MHz, the margin between the emission level and the specification limit is in the worst case 2.4 dB at the frequency of 1390.0MHz, vertical polarization.

The EUT met the requirements of the F.C.C. Part 15, Subpart H, Section 15.709(c)(3) specification.

The details of the highest emissions are given in *Figure 103*.

12. Radiated Emission in the Band 602 – 620 MHz

12.1 Specification

FCC Part 15, Subpart H, Section 15.709 (c)(4)

12.2 Test Procedure

The E.U.T operation mode and test set-up are as described in Section 2 of this report.

A preliminary measurement to characterize the E.U.T was performed inside the shielded room, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The configuration tested is shown in *Figure 2*.

The test distance was 1 meters.

The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

The E.U.T. was operated at 35, 39 channels.

Measurements were performed using a PEAK\Q.PEAK detector and 120 kHz RBW and 300 kHz VBW.

FREQ SUB BAND (MHz)	Limit (dBμV/m)	Worst case (dBμV/m)

13. Antenna Gain/Information

The antenna gain is 6.0 dBi.

TVWS Antenna for CPE

Runcom Part Number	ANT-TVWS-CPE-6
Frequency range	470-700 MHz
Bandwidth	Broadband
Polarization	Vertical
Connector	F-type
Maximum Power Handling Capability	10 W
Gain (at mid band, ref. to $\lambda/2$ dipole)	6.0 dBi
VSWR (in the whole band)	< 1.8:1
Impedance	50 ohm
Front to back ratio	> 20 dB
Cross Polarization Isolation	> 14 dB
Lightning Protection	DC Grounded Elements
Horizontal Beam width (at -3 dB, depends on frequency)	90°
Vertical Beam width (at -3 dB, depends on frequency)	35° - 21°

14. R.F Exposure/Safety

Typical use of the E.U.T. is as a CPU.

The typical placement of the E.U.T. is on a pole. The customer has stated that the typical distance between the E.U.T. and the user, is at least 200 cm.

Calculation of Maximum Permissible Exposure (MPE)

Based on Section 1.1310 Requirements

Using table 1 of Section 1.1310 limit for general population/uncontrolled exposures, the above level is an average over 30 minutes.

$$\text{FCC limits at 473.0 MHz is: } \frac{f}{1500} = 0.32 \frac{mW}{cm^2}$$

$$\text{FCC limits at 587.0 MHz is: } \frac{f}{1500} = 0.39 \frac{mW}{cm^2}$$

$$\text{FCC limits at 695.0 MHz is: } \frac{f}{1500} = 0.46 \frac{mW}{cm^2}$$

Modulation	Oper. Freq	Chain 1 Peak Power		Oper. Freq	Chain 2 Peak Power		Sum Peak Power
	(MHz)	(dBm)	(mW)	(MHz)	(dBm)	(mW)	(mW)
16QAM	695.0	20.9	123	695.0	21.6	145	268
QPSK	473.0	22.5	178	695.0	20.4	110	288

(a) The power density produced by the E.U.T. is

$$S = \frac{P_t G_t}{4\pi R^2}$$

P_t - Transmitted Power (Peak) = 288 mW

G_t - Antenna Gain, 6.0 dBi = 4.0 numeric

R - Distance from Transmitter using 200cm

(b) The peak power density is:

$$S_p = \frac{288 \times 4}{4\pi(200)^2} = 0.002 \frac{mW}{cm^2}$$

(c) This is below the FCC limit.

10 meter range

FREQUENCY	AFE	FREQUENCY	AFE
(MHz)	(dB/m)	(MHz)	(dB/m)
1000	22.4	10000	36.1
2000	25.2	11000	37.0
3000	31.1	12000	41.3
4000	30.2	13000	38.1
5000	34.2	14000	41.7
6000	31.6	15000	39.0
7000	34.7	16000	38.8
8000	34.8	17000	43.2
9000	36.2	18000	43.7

15.4 Correction factors for ACTIVE LOOP ANTENNA

**Model 6502
S/N 9506-2950**

FREQUENCY	Magnetic Antenna Factor	Electric Antenna Factor
(MHz)	(dB)	(dB)
.009	-35.1	16.4
.010	-35.7	15.8
.020	-38.5	13.0
.050	-39.6	11.9
.075	-39.8	11.8
.100	-40.0	11.6
.150	-40.0	11.5
.250	-40.0	11.6
.500	-40.0	11.5
.750	-40.1	11.5
1.000	-39.9	11.7
2.000	-39.5	12.0
3.000	-39.4	12.1
4.000	-39.7	11.9
5.000	-39.7	11.8
10.000	40.2	11.3
15.000	-40.7	10.8
20.000	-40.5	11.0
25.000	-41.3	10.2
30.000	42.3	9.2

15.5 Correction factors for Log Periodic Antenna

Model 3146

S/N 9505-4081

CALIBRATION DATA

Frequency, MHz	Antenna factor, dB/m ¹⁾
200	11.55
250	11.60
300	14.43
400	15.38
500	17.98
600	18.78
700	21.17
800	21.16
900	22.67
1000	24.09

¹⁾ The antenna factor shall be added to receiver reading in dB μ V to obtain field strength in dB μ V/m.
