Equipment: Device 1 Rev A

FCC ID: Y76-NFBASERA

FCC Rules: Part 15.247 (DTS)

Enclosed please find your copy of the Engineering Test Report for which you are subject to the restrictions as listed on the attached summary.

This report may not be reproduced, except in full, without written permission from Compliance Testing, LLC. Please retain a copy of this report for your archival purposes.

Once a Telecommunication Certification Body (TCB) issues a Grant the Federal Communication Commission (FCC) has 30 days to review the application and request added information. It is your decision whether or not to market the equipment subject to a possible recall before the end of the 30 days.

If your equipment is still retained by us, it will be returned to you 30 days after approval is achieved. Our invoice for services has been directed to your Accounts Payable Department.

For any additional information please contact us.

Sincerely,

Compliance Testing

Test Report Revision History

Revision	Date	Revised By	Reason for revision
1.0	January 24, 2011	G. Corbin	Original Document

The applicant has been cautioned as to the following:

15.21 Information to User

The user's manual or instruction manual for an intentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.27(a) Special Accessories

Equipment marketed to a consumer must be capable of complying with the necessary regulations in the configuration in which the equipment is marketed. Where special accessories, such as shielded cables and/or special connectors are required to enable an unintentional or intentional radiator to comply with the emission limits in this part, the equipment must be marketed with, i.e. shipped and sold with, those special accessories. However, in lieu of shipping or packaging the special accessories with the unintentional or intentional radiator, the responsible party may employ other methods of ensuring that the special accessories are provided to the consumer, without additional charge.

Information detailing any alternative method used to supply the special accessories for a grant of equipment authorization or retained in the verification records, as appropriate. The party responsible for the equipment, as detailed in § 2.909 of this chapter, shall ensure that these special accessories are provided with the equipment. The instruction manual for such devices shall include appropriate instructions on the first page of text concerned with the installation of the device that these special accessories must be used with the device. It is the responsibility of the user to use the needed special accessories supplied with the equipment.

Testimonial and Statement of Certification

This is to certify that:

1. **That** the application was prepared either by, or under the direct supervision of, the undersigned.
2. **That** the technical data supplied with the application was taken under my direction and supervision.
3. **That** the data was obtained on representative units, randomly selected.
4. **That**, to the best of my knowledge and belief, the facts set forth in the application and accompanying technical data is true and correct.

A handwritten signature in black ink that reads "Greg Corbin".

Certifying Engineer:

Greg Corbin

15.203: Antenna Requirement:

☒	The antenna is permanently attached to the EUT
☐	The antenna uses a unique coupling
☐	The EUT must be professionally installed
☐	The antenna requirement does not apply

Standard Test Conditions and Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.10-2009 and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104 °F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Measurement results, unless otherwise noted, are worst-case measurements.

Environmental Conditions		
Temperature	Humidity	Pressure
21.6 – 24.6 deg C	10.8 – 30.7 %	964.7 – 975.4 mbar

A2LA

“A2LA has accredited Compliance Testing LLC, in Chandler, AZ for technical competence in the field of Electrical testing. The accreditation covers the specific tests and types of tests listed on the agreed scope of accreditation. This laboratory meets the requirements of ISO 17025:2005 ‘General Requirements for the Competence of Testing and Calibration Laboratories’ and any additional program requirements in the identified field of testing.”

Please refer to www.a2la.org for current scope of accreditation.

EUT Description

The base unit (Device 1Rev A) communicates to a sensor module (Device 2 Rev A). When the sensor unit detects the presence of water it sends a signal to the Base that in turn can send a signal to a control valve to shutoff the water at the source. The base and sensor units both contain a DTS wireless transmitter operating in the 2400 – 2883.5 MHz frequency range.

A conducted and radiated sample was provided.

EUT Operation during Tests

A test software program (Freescale Codewarrior) was used to tune the EUT to the low, mid, and high operating frequencies, (2405, 2440, 2480 MHz). The laptop with the test software was connected to the EUT via a USB Multilink Interface pod. The pod was only connected to the EUT to change channels and was removed prior to performing the tests.

Qty	Type	Length, m	Shield	Shielded Hood	Ferrite
1	USB	2	None	None	None

Name of Test: Peak Output Power
Specification: 15.247(b)
Test Equipment Utilized: i00331

Engineer: G. Corbin
Test Date: 1/20/2011

Test Procedure

The EUT was connected to a spectrum analyzer per the test set-up.
The RBW = 3 MHz, which is greater than the OCC BW of 1.5 MHz.

Test Setup

Transmitter Peak Output Power

Tuned Frequency MHz	Recorded Measurement	Specification Limit	Result
2405	0.479 mW	1 W	Pass
2440	0.501 mW	1 W	Pass
2480	0.537 mW	1 W	Pass

Name of Test: Conducted Spurious Emissions
Specification: 15.247(d)
Test Equipment Utilized: i00331, i00177, i00385

Engineer: G. Corbin
Test Date: 1/20/2011

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT met the requirements for spurious emissions. The reference level was offset for the peak power output with the resolution bandwidth set for 1 MHz. The frequency range from 30 MHz to the 10th harmonic of the fundamental transmitter was observed. Only detectable spurious emissions were recorded and plotted. The reference level is added to the recorded measurement to provide the corrected level dBc

Only the worst case is recorded in the Conducted Spurious Emissions Summary Test Table.

Test Setup

Conducted Spurious Emissions Summary Test Table

Tuned Frequency MHz	Emission Frequency MHz	Recorded Measurement dBm	Peak Output Power dBm	Corrected Measurement dBc	Specification Limit dBc	Result
2405	4804	-47.3	-3.2	-44.1	-20	Pass
2440	4912	-44.5	-3.0	-41.5	-20	Pass
2480	4966	-43.0	-2.7	-40.3	-20	Pass

Conducted Spurious Emissions 2405 MHz 30 MHz – 1 GHz

Conducted Spurious Emissions 2405 MHz 1 – 2.4 GHz

Conducted Spurious Emissions 2405 MHz 2.5 – 3.4 GHz

Conducted Spurious Emissions 2405 MHz 3.4 – 25 GHz

Conducted Spurious Emissions 2440 MHz 30 MHz – 1 GHz

Conducted Spurious Emissions 2440 MHz 1 – 2.4 GHz

Conducted Spurious Emissions 2440 MHz 2.5 – 3.4 GHz

Conducted Spurious Emissions 2440 MHz 3.4 – 25 GHz

Conducted Spurious Emissions 2480 MHz 30 MHz – 1 GHz

Conducted Spurious Emissions 2480 MHz 1 – 2.4 GHz

Conducted Spurious Emissions 2480 MHz 2.5 – 3.4 GHz

Conducted Spurious Emissions 2480 MHz 3.4 – 25 GHz

Name of Test: Radiated Spurious Emissions
Specification: 15.247(d), 15.209(a), 15.205
Test Equipment Utilized: i00028, i00103, i00177, i00331, i00385

Engineer: G. Corbin
Test Date: 1/19/2011

Test Procedure

The EUT was tested in a semi-anechoic chamber set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Spurious Emissions. The antenna, band reject filter and cable correction factors were summed with the amplifier gain and input into the spectrum analyzer as an offset to ensure accurate readings. The spectrum for each tuned frequency was examined to the 10th harmonic.

Test Setup

Detector Settings	RBW	VBW	Span
Peak	1 MHz	3 MHz	as necessary
Average	1 MHz	3 MHz	as necessary

Radiated Spurious Emissions

Name of Test: Emissions At Band Edges
Specification: 15.247(d), 15.209(a), 15.205
Test Equipment Utilized: i00028, i00103, i00177, i00331, i00385

Engineer: G. Corbin
Test Date: 1/19/2011

Test Procedure

The EUT was tested in a semi-anechoic chamber set 3m from the receiving transducer. A spectrum analyzer was used to verify that the EUT met the requirements for band edge with both peak and average measurements. The cable and transducer correction factors were input into the analyzer as a reference level offset to ensure accurate readings were obtained.

Band Edge Test Setup

Band Edge Emissions Summary

Tuned Freq (MHz)	Emission Freq (MHz)	Monitored Level (dBc)	Detector	Limit (dBc)	Result

Name of Test: Occupied Bandwidth
Specification: 15.247(a)(2)
Test Equipment Utilized: i00331

Engineer: G. Corbin
Test Date: 1/20/2011

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Span was set wide enough to capture the entire transmit spectrum and the resolution bandwidth was set to at least 1% of the span. The analyzer was set to max hold and when the entire spectrum was captured the 6dB bandwidth was measured to verify the bandwidth met the specification.

Test Setup
