1. INTRODUCTION

This document presents the result of RADIO test carried out on the following equipment: Base ZARB 18W, in accordance with normative reference.

2. PRODUCT DESCRIPTION

Class:	Class B (Residential environment)
Antenna type and gain:	Internal antenna PIFA type (mechanical) area=25mmx25mm or external antenna wire type (about 7cm) with a 2m shielded cable and MCX internal connector (Gain: 4dBi)
Operating frequency range:	2400-2483.5 MHz
Number of channels:	37 during normal utilization mode +3 for pairing phase
Channel spacing:	2 MHz
Modulation:	D.S.S.S.
Power source:	24 Vdc to 240 Vdc or 24 Vac to 240 Vac

Power level, frequency range and channels characteristics are not user adjustable.
The details pictures of the product and the circuit boards are joined with this file.

3. NORMATIVE REFERENCE

The standards and testing methods related throughout this report are those listed below.
They are applied on the whole test report even though the extensions (version, date and amendment) are not repeated.

CFR 47 FCC Part 15 (2013)	Radio Frequency Devices
ANSI C63.4 (2003)	Methods of Measurement of Radio-Noise Emissions from Low- voltage Electrical and Electronics Equipment in the range of 9 kHz to 40 GHz.
KDB 558074 D01 DTS Meas Guidance v03r01.	Guidance for Performing Compliance on Digital Transmission Systems Operating under §15.247

4. TEST METHODOLOGY

Radio performance tests procedures given in CFR 47 part 15:

Subpart B –Unintentional Radiators

Paragraph 107: Conducted limits

Paragraph 109: Radiated emission limits

Subpart C – Intentional Radiators

Paragraph 203: Antenna requirement

Paragraph 205: Restricted bands of operation

Paragraph 207: Conducted limits

Paragraph 209: Radiated emission limits; general requirements

Paragraph 215: Additional provisions to the general radiated emission limitations

Paragraph 247: Operation within the bands 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz

5. TEST EQUIPMENT CALIBRATION DATES

	(d) Intentional radiator	X				
	(e) Peak power spectral density	X				
	(f) Hybrid system			X		
	(g) Frequency hopping requirements			X		
	(h) Frequency hopping intelligence			X		
	(i) RF exposure compliance	X				Note 5

NAP: Not Applicable NAs: Not Asked

Note 1: Integral and dedicated antenna (internal MCX connector). Professionally installed equipment.

Note 2: See FCC part 15.247 (d).

Note 3: See FCC part 15.209. Unwanted emissions levels are all below the fundamental emission field strength level.

Note 4: Conducted measurement is not possible (integral antenna), so we used the radiated method in open field.

Note 5: $PSD = EIRP / (4 * \pi * R^2) = 9.48 / (4 * \pi * (20 \text{ cm})^2) = 0.0018 \text{ mW/cm}^2$ (limit = 1 mW/cm^2).

The equipment fulfils the requirements on power density for general population/uncontrolled exposure and therefore fulfils the requirements of 47 CFR §1.1310.

« To declare, or not, the compliance with the specifications, it was not explicitly taken into account of uncertainty associated with the results »

7. MEASUREMENT OF THE CONDUCTED DISTURBANCES

Standard: FCC Part 15

Test procedure: Paragraph 15.107

Limits: Class B

Software used: BAT-EMC V3.6.0.32

Test set up:

The EUT is isolated and placed on a wooden table, 0.8 m over an horizontal reference plane and 0.4 m from a vertical reference plane. It is powered by an artificial main network placed on the ground reference plane. The equipment is powered with the AC power operating voltage of 120 V / 60 Hz.

See photos in appendix 2

Frequency range: 150 kHz - 30 MHz

Detection mode: Peak / Average

Bandwidth: 10 kHz / 9kHz

Equipment under test operating condition:

The equipment is blocked in reception mode.

The measure is realized with internal antenna, the most critical powerful configuration.

Results:

Ambient temperature (°C): 20.6
Relative humidity (%): 44

Sample N° 1:

Measurement on the mains power supply:

The measurement is first realized with Peak detector.

Curve N° 1: measurement on the Neutral with peak detector

Curve N° 2: measurement on the Line with peak detector

The frequencies which are not 6 dB under the Average limit are then analyzed with Average detector.

Curve N° 3: average measurement on the Neutral, for the frequency range: 350 kHz – 500 kHz

Curve N° 4: average measurement on the Line, for the frequency range: 350 kHz – 500 kHz

— FCC part 15 : 10 §107 - Classe:B - Moyenne/
— FCC part 15 : 10 §107 - Classe:B - QCrête/
— Mes.Peak (Phase 1)

Test conclusion:

RESPECTED STANDARD

8. RADIATED EMISSION LIMITS

Standard: FCC Part 15

Test procedure: paragraph 109

Limit class: Class B

Test set up:

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS). The EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber. The EUT is placed on a rotating table, 1.5m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

See photos in appendix 2.

Frequency range: From 30 MHz to 12.4GHz (5th harmonic of the highest frequency used)

Detection mode: Quasi-peak ($F < 1$ GHz) Average ($F > 1$ GHz)

Bandwidth: 120 kHz ($F < 1$ GHz) 1 MHz ($F > 1$ GHz)

Distance of antenna: 3 meters

Antenna height: 1 to 4 meters

Antenna polarization: vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment is blocked in reception mode.

The measure is realized with internal antenna and repeated with external antenna

Results:

Ambient temperature (°C): 21.5
Relative humidity (%): 32

Power source: 120Vac – 60 Hz

Sample N° 1 Low channel

Not any spurious has been detected.

Applicable limits: for $30 \text{ MHz} \leq F \leq 88 \text{ MHz}$:	40 dB μ V/m at 3 meters
for $88 \text{ MHz} < F \leq 216 \text{ MHz}$:	43.5 dB μ V/m at 3 meters
for $216 \text{ MHz} < F \leq 960 \text{ MHz}$:	46 dB μ V/m at 3 meters
Above 960 MHz:	54 dB μ V/m at 3 meters

Sample N° 1 central channel

Not any spurious has been detected.

Applicable limits: for $30 \text{ MHz} \leq F \leq 88 \text{ MHz}$:	40 dB μ V/m at 3 meters
for $88 \text{ MHz} < F \leq 216 \text{ MHz}$:	43.5 dB μ V/m at 3 meters
for $216 \text{ MHz} < F \leq 960 \text{ MHz}$:	46 dB μ V/m at 3 meters
Above 960 MHz:	54 dB μ V/m at 3 meters

Sample N° 1 High channel

Applicable limits: for $30 \text{ MHz} \leq F \leq 88 \text{ MHz}$:	40 dB μ V/m at 3 meters
for $88 \text{ MHz} < F \leq 216 \text{ MHz}$:	43.5 dB μ V/m at 3 meters
for $216 \text{ MHz} < F \leq 960 \text{ MHz}$:	46 dB μ V/m at 3 meters
Above 960 MHz:	54 dB μ V/m at 3 meters

Note: any spurious which has more than 20 dB of margin compared to the applicable limit is not necessarily reported.

Test conclusion:

RESPECTED STANDARD

9. MEASUREMENT OF THE CONDUCTED DISTURBANCES

Standard: FCC Part 15

Test procedure: Paragraph 15.207

Software used: BAT-EMC V3.6.0.32

Test set up:

The EUT is isolated and placed on a wooden table, 0.8 m over an horizontal reference plane and 0.4 m from a vertical reference plane. It is powered by an artificial main network placed on the ground reference plane. The equipment is powered with the AC power operating voltage of 120 V / 60 Hz.

See photos in appendix 2

Frequency range: 150 kHz - 30 MHz

Detection mode: Peak / Average

Bandwidth: 10 kHz / 9 kHz

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

The measure is realized with internal antenna, the most critical powerful configuration.

Results:

Ambient temperature (°C): 20.6
Relative humidity (%): 44

Sample N° 1: central channel

Measurement on the mains power supply:

The measurement is first realized with Peak detector.

Curve N° 5: measurement on the Neutral with peak detector

Curve N° 6: measurement on the Line with peak detector

The frequencies which are not 6 dB under the Average limit are then analyzed with Average detector.

Curve N° 7: average measurement on the Neutral, for the frequency range: 350 kHz – 500 kHz

Curve N° 8: average measurement on the Line, for the frequency range: 350 kHz – 500 kHz

— FCC part 15 : 10 §107 - Classe:B - Moyenne/
— FCC part 15 : 10 §107 - Classe:B - QCrête/
— Mes.Peak (Phase 1)

Test conclusion:
RESPECTED STANDARD

10. ADDITIONAL PROVISIONS TO THE GENERAL RADIATED EMISSION LIMITATIONS

Standard: FCC Part 15

Test procedure: Paragraph 15.215

Test set up:

Test realized in near field. All field strength measurements are correlated with the radiated maximum peak output power

Test operating condition of the equipment:

The equipment under test is blocked in continuous transmission mode, modulated by internal data signal, at the highest output power level which the transmitter is intended to operate (with internal antenna, the most critical powerful configuration).

Results:

Ambient temperature (°C): 20
Relative humidity (%): 45

Power source: 120Vac – 60 Hz

Lower Band Edge: from 2398 MHz to 2400 MHz
Upper Band Edge: from 2483.5 MHz to 2485.5 MHz

Sample N° 1:

<u>FUNDAMENTAL FREQUENCY (MHZ)</u>	<u>FIELD STRENGTH LEVEL OF FUNDAMENTAL (DBμV/M)</u>	<u>DETECTOR (PEAK OR AVERAGE)</u>	<u>FREQUENCY OF MAXIMUM BAND- EDGES EMISSION (MHZ)</u>	<u>DELTA MARKER (DB)*</u>	<u>CALCULATED MAX OUT-OF- BAND EMISSION LEVEL (DBμV/M)</u>	<u>LIMIT (DBμV/M)</u>	<u>MARGIN (DB)</u>
2404	102	PEAK	2399.88125	-31.45	70.55	82	11.45
2478	104.7	PEAK	2483.626	-41.74	62.96	74	11.04
2478	104.7	AVERAGE	2483.554	-63.65	41.05	54	12.95

* Marker-Delta method

20 dB bandwidth curves are given in appendix 5; band-edge curves are given in appendix 6.

Test conclusion:

RESPECTED STANDARD

11. MAXIMUM PEAK OUTPUT POWER

Standard: FCC Part 15

Test procedure: paragraph 15.247 (b)

Test set up:

The system is tested in anechoic chamber. The EUT is placed on a rotating table, 1.5m from a ground plane. Zero degree azimuth corresponds to the front of the device under test.

The measurement of the electro-magnetic field is realized, with a resolution bandwidth adjusted at 3 MHz and video bandwidth at 10 MHz.

Distance of antenna: 3 meters

Antenna height: 1 to 4 meters

Antenna polarization: vertical and horizontal

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate

The measure is realized with internal antenna and repeated with external antenna

Results:

Ambient temperature (°C): 21.3
Relative humidity (%): 40

Power source: 120Vac- 60Hz

Sample N° 1 Low Channel (internal antenna)

$$* P = (E \times d)^2 / (30 \times G_p) \text{ with } d = 3 \text{ m and } G_p = 4$$

Test conclusion:

RESPECTED STANDARD

12. INTENTIONAL RADIATOR

Standard: FCC Part 15

Test procedure: paragraph 15.205, paragraph 15.209, paragraph 15.247 (d)

Test set up:

The measure is realized on open area test site under 1 GHz and in anechoic chamber above 1 GHz.

When the system is tested in an open area test site (OATS). The EUT is placed on a rotating table, 0.8m from a ground plane.

When the system is tested in anechoic chamber. The EUT is placed on a rotating table, 1.5m from a ground plane.

Zero degree azimuths correspond to the front of the device under test.

See photos in appendix 2.

Frequency range: From 9 kHz to 25GHz (10th harmonic of the highest fundamental frequency)

Detection mode: Quasi-peak ($F < 1 \text{ GHz}$)

Peak / Average ($F > 1 \text{ GHz}$)

Bandwidth: 200Hz ($9 \text{ kHz} < F < 150\text{kHz}$)
9 kHz ($150 \text{ kHz} < F < 30\text{MHz}$)
120 kHz ($30 \text{ MHz} < F < 1 \text{ GHz}$)
100 kHz / 1 MHz ($F > 1 \text{ GHz}$)

Distance of antenna: 3 meters

Antenna height: 1 to 4 meters

Antenna polarization: vertical and horizontal (only the highest level is recorded)

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

The measure is realized with internal antenna and repeated with external antenna

Results:

7434 ⁽²⁾	P	1000	V	54.56	74	19.44
7434 ⁽²⁾	Corrected with "duty cycle correction factor" ⁽¹⁾	1000	V	4.56	54	49.44

⁽¹⁾ "Duty cycle correction factor": $20\log(\text{dwell time}/100\text{ms}) \Rightarrow 20\log(0.316/100) = -50\text{dB}$

⁽²⁾ restricted bands of operation in 15.205

Note: any spurious which has more than 20 dB of margin compared to the applicable limit is not necessarily reported.

Applicable limits: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

The highest level recorded in a 100 kHz bandwidth is 102 dB μ V/m on channel 1 with internal antenna.

So the applicable limit is 82 dB μ V/m.

The highest level recorded in a 100 kHz bandwidth is 100 dB μ V/m on channel 1 with external antenna.

So the applicable limit is 80 dB μ V/m.

In addition, radiated emissions which fall in the restricted band, as defined in section 15.205 (a), must also comply with the radiated emission limits specified in section 15.209 (a) (see section 15.205 (c)).

Test conclusion:

RESPECTED STANDARD

13. PEAK POWER DENSITY

Standard: FCC Part 15

Test procedure: paragraph 15.247 (e)

Test set up:

The system is tested in an open area test site (OATS). The EUT is placed on a rotating table, 0.8m from a ground plane. Zero degree azimuth corresponds to the front of the device under test.

The system is tested in anechoic chamber. The EUT is placed on a rotating table, 1.5m from a ground plane. Zero degree azimuth corresponds to the front of the device under test.

The measuring distance between the equipment and the test antenna is 3 m. The test antenna has been oriented in two polarizations (Vertical and Horizontal) and raised and lowered from 1m to 4m above the ground level. Only the highest level of each measurement is reported.

We used the same method of the peak output power measurement, but the equipment under test power level is recorded with the spectrum analyzer.

Resolution bandwidth: 100 kHz

Video bandwidth: 1 MHz

Equipment under test operating condition:

The equipment under test is blocked in continuous modulated transmission mode, at the highest output power level at which the transmitter is intended to operate.

Results:

Ambient temperature (°C): 21.3
Relative humidity (%): 40

Power source: 120Vac- 60Hz

Sample N° 1 Low channel (internal antenna)

	Peak power density at frequency: MHz
Normal test conditions	6.77
Limits	+8 dBm

Sample N° 1 Central channel (internal antenna)

	Peak power density at frequency: MHz
Normal test conditions	6.77
Limits	+8 dBm

Sample N° 1 High channel (internal antenna)

	Peak power density at frequency: MHz
Normal test conditions	6.77
Limits	+8 dBm

Sample N° 1 Low channel (external antenna)

	Peak power density at frequency: MHz
Normal test conditions	4.77
Limits	+8 dBm

Sample N° 1 Central channel (external antenna)

	Peak power density at frequency: MHz
Normal test conditions	4.77
Limits	+8 dBm

Sample N° 1 High channel (external antenna)

	Peak power density at frequency: MHz
Normal test conditions	2.77
Limits	+8 dBm

Test conclusion:
