

ANT+ scio alti CYCLE COMPUTER WIRELESS

- ① means L button ② means R button ③ means Setting button
④ means Hold ⑤ button for 10 sec
- ALL CLEAR** : L+RS hold 3's then enter warm-up display
- (1).Data setting mode :**
S Button : Press for quit data setting mode
L Button : Press for change setting digital
Hold 2's for change to next setting mode
R Button : Press for increase setting value (5 times per second)
Hold 2's for auto increase setting value (5 times per second)
- (2).General mode:**
L Button : Press for change function
Hold 2's for data reset
R Button : Press for change mode group
Hold 2's for on/off EL backlight
L+R Button : Hold 2's for re-search paired sensor (except in Alt group)
L+R Button : Hold 2's for enter altitude adjustment mode (in Alt group)
S Button : Press for enter data setting mode
- (3).Altitude adjustment mode :**
(only in Altitude group and no speed data)
L Button : Press for change setting digital
R Button : Press for increase setting value (5 times per second)
L + R Button : Hold 2's for rest to zero
- (4).Backlight on status**
L Button : Press to turn on backlight for 4's then pressing again for changing group
R Button : Press to turn on backlight for 4's then pressing again for changing mode

Signals

▶ **DI2** : DI2 gear sensor signals
▶ **SPD** : Speed sensor signals
▶ **CAD** : Cadence sensor signals
▶ **HRM** : Heart Rate sensor signals
▶ **PWR** : Power sensor signals

Signals detecting
EX: show DI2 information

It is paired, no got the signals even the sensor is mounted

It is not DI2 paired, no got the signals

Button function description

- ALL CLEAR** : L+RS hold 3's then enter warm-up display
- (1).Data setting mode :**
S Button : Press for quit data setting mode
L Button : Press for change setting digital
Hold 2's for change to next setting mode
R Button : Press for increase setting value (5 times per second)
Hold 2's for auto increase setting value (5 times per second)
- (2).General mode:**
L Button : Press for change function
Hold 2's for data reset
R Button : Press for change mode group
Hold 2's for on/off EL backlight
L+R Button : Hold 2's for re-search paired sensor (except in Alt group)
L+R Button : Hold 2's for enter altitude adjustment mode (in Alt group)
S Button : Press for enter data setting mode
- (3).Altitude adjustment mode :**
(only in Altitude group and no speed data)
L Button : Press for change setting digital
R Button : Press for increase setting value (5 times per second)
L + R Button : Hold 2's for rest to zero
- (4).Backlight on status**
L Button : Press to turn on backlight for 4's then pressing again for changing group
R Button : Press to turn on backlight for 4's then pressing again for changing mode

MAIN UNIT SETTING

- All clear**
1. Hold down the R+L button and S button simultaneously for more than 3 seconds to initiate the computer and clear all data.
IMPORTANT! Be sure to initiate the computer before it is used, otherwise the computer may run errors.
2. The LCD segments will be tested automatically after the unit is initiated.
3. Press button to stop LCD test, then the flickering "BIKE 1"
- 1-1. Bike Selection**
Press R button to choose Bike 1 or Bike 2. Hold down the L button for more than 2 second to change to the unit setting screen.
- 1-2. Unit Selection**
Press R button to choose Km/h or M/h.
- 1-3. Circumference data setting Bike1/ Bike2**
1. It provides 3 sets of default circumference value for quick setting (RD 700C, MTB 26 and MTB 28, for Bike1 and Bike2).
2. You may change the value by yourself, too (2155 for Bike1, and 2055 for Bike2).
- WHEEL CIRCUMFERENCE**
Roll the wheel until the valve stem is at its lowest point close to the ground, then mark this

Fig.1 Data setting
All clear

DATA RESET (Fig.4)
1. Hold down the L button till the LCD digit is blanked, then release it. The computer will reset data from stored values to zero.
2. ODO, CLK cannot be reset.

BACKLIGHT (Fig.5)
1. Hold the button R for 2 seconds to switch on/off the EL backlight function.
2. When the EL backlight function is at working status, each press of the button R or L will turn on the back light for 4 seconds.

CLOCK: Clock Time 12H/24H Alternative
1. Hold the button R for 2 seconds to switch on/off the EL backlight function.
2. When the EL backlight function is at working status, each press of the button R or L will turn on the back light for 4 seconds.

ABOUT ALTITUDE CALIBRATION (Fig.6)
1. Press both L and R buttons for 2 seconds to Altitude Setting.
2. Press the R button to set the value of a digit, and press the L button to move to the next digit.
3. Attention: Calibrate the current altitude only when there's no speed signals.
4. Press both L and R buttons for 2 seconds, and the current altitude value will return to zero.
5. Click both L and R buttons exit Altitude Setting.

AUTOMATIC START/STOP
The computer will automatically begin counting data upon riding and stop counting data when riding is stopped. The flickering symbol "S" indicates that the computer is at start status.

POWER ON/OFF (Fig.7)
To preserve battery, this computer will automatically switch off and just displays the CLK data when it has not been used for about 15 minutes. The power turned on by pressing the any button.

BATTERY REPLACEMENT (Fig.8)
1. When low battery indicator is shown on the display, please check computer and DI2 which one is low battery status. If it is computer, please replace CR2032 battery, if it is DI2, please take off DI2 battery and charge it.
2. The positive (+) pole of the CR2032 battery must face the battery cap.
3. Press buttons L, R, S for 3 seconds to initiate the main unit.
Attention: When computer is low battery status, we suggest that you replace the battery with a new one A.S.A.P. Otherwise, the altitude function will turn off, and the new data may be lost when DI2 is low battery status, we suggest that you take DI2 battery for charging A.S.A.P. Otherwise, it will affect to switch gear.

Suitable Fork Size
12mm to 50mm (0.5" to 2.0") Forks

Wireless Sensing Distance: 700cm between the transmitter and the main unit.

Wheel Circumference Setting: 1mm - 3999mm (1mm increment)

Operation Temperature: 0°C ~ 50°C (32°F ~ 122°F)

Storage Temperature: -10°C ~ 60°C (14°F ~ 140°F)

Main Unit Battery Power: 3V battery x 1 (CR2032), battery operating life is about 2 years. (Based on an average of 1.5 hours use per day)

Transmitter Battery Power: 3V battery x 1 (CR2032)

Dimensions and Weight
Main Unit: 41.75 x 57.1 x 41.78mm / 30.10g
Transmitter: 35.8 mm x 34.8mm x 14mm / 13.9g

• The specifications and designs may be changed without notice.

Functions

T R I P D A T A

1. Current speed
The current speed is always shown on the upper display during riding.
2. The speed data are updated per second.
3. When you do not ride the bike for more than 4 seconds, the speed data will be reset to zero.

CLOCK: Clock Time 12H/24H Alternative
1. When the user sets the clock time in Data Setting Mode, there are two formats for option-12H and 24H. In this format, AM or PM 24H means 24 hours.
2. 12H means 12 hours. In this format, AM or PM 24H means 24 hours.
3. On the contrary, if the current speed is below the average speed, the downward arrow (v) will flicker.

CADENCE
CURRENT: RPM Current Cadence
1. RPM (Revolutions Per Minute) is a measure of rotational speed. It's updated every second.
2. The current RPM (cadence) is always shown on the middle display.
3. If you do not turn the crank for over 4 seconds, the current RPM will be reset to zero.

MAXIMUM: Maximum Cadence
1. With this function, the computer will record your maximum cadence during riding.
2. Whenever you reset the computer or change the battery, the max. RPM record for a trip will be cleared.

AVERAGE: Average Cadence
1. With this function, the computer will display the average cadence during riding. It's updated per second.
2. Whenever you reset the computer or change the battery, the average cadence record will be cleared.

HEART RATE
CURRENT: Current Heart Rate
Display the current heart rate on the middle of display.
AVERAGE: Average Heart Rate
Calculating the average heart rate during exercise. According to this value we can know if the cardiovascular condition has been improved while the same intensity of exercise.

MAXIMUM: Maximum Heart Rate
Monitors and records the maximum heart rate during exercise.

TARGETZONE: Heart Target Zone
1. The computer displays you set heart target.
2. In the mode, Press S button to set heart target range.

1. Target zone pace arrow limit
1. This value depends on the target zone setup, and the lower and upper limits are displayed as a heart rate value.

2. The heart rate display is simple and clear and is convenient for the beginner.
3. "1" will display when the heart rate is below the lower limit of the target zone.
4. "1" will display when the heart rate is above the upper limit of target zone.

T. IN ZONE: Time in Target Zone
Calculates and records the exercise time within the target zone.

T. OUT ZONE: Time over Target Zone
Calculates and records the exercise time above the target zone.

POWER
CURRENT: Current Power
The current Power data is shown on the middle display.

AVERAGE: Average Power
With this function, the computer will display the average Power data during riding. It's updated per second.

MAXIMUM: Maximum Power
With this function, the computer will display the maximum Power data during riding.

1. Power Pace Arrow
1. The pace arrow shows the comparison between the current power and average power.
2. When the current power is above or equal to the average speed, the upward (↑) will display on the middle of left side.
3. On the contrary, if the current speed is below the average power, the downward arrow (↓) will flicker on the middle of left side.

ALTITUDE
CURRENT: Current Altitude
1. The current altitude is always displayed on the upper display.
2. To get accurate basis altitude, the cyclist should calibrate the altitude before each ride.
3. The measurement is based on the principle that atmospheric pressure decreases as elevation increases.
4. The altitude is measured by means of the atmospheric pressure, so it's weather-dependent.
5. You may obtain the altitude data from a topographic map or the Internet.
6. The altitude of the altimeter is pre-calibrated by the precise instrument at the factory before shipment.

GRADIENT: Current altitude gradient
With this function, the computer will display the Current altitude gradient riding.

AVG GRAD: Trip AVG altitude gradient
1. With this function, the computer will display the average altitude gradient during riding.
2. Whenever you reset the computer or change the battery, the average altitude gradient record will be cleared.

ALTI UP/ALTI DOWN: Trip altitude up / Trip altitude down
1. With this function, it displays the accumulated altitude up/down during a trip.
2. When you ride over uphill paths, the altimeter will accumulate the altitude gains. However, when you ride over downhill paths, the computer will accumulate the altitude loss.

TEMP
CURRENT: Current Temperature
Temperature would be automatically selected under this mode. You could choose either in °C or °F to display the temperature. This function would bring you the joy of riding outdoors.

MAXIMUM / MINIMUM: Maximum temperature / Minimum temperature
1. With this function, the computer will display the Maximum temperature / Minimum temperature.
2. Whenever you reset the computer or change the battery, the Maximum temperature / Minimum temperature record will be cleared.

BATTERY: Low Battery Indicator
1. When low battery indicator is shown on the display, please check computer and DI2 which one is low battery status. If it is computer, please replace CR2032 battery, if it is DI2, please take off DI2 battery and charge it.
2. When computer is low battery status, replace the battery with a new one A.S.A.P. when the symbol blinks on the display.
3. Otherwise, the new data of some function will not be stored into the computer, and to save battery power, there's no backlight in low battery status.
4. When DI2 is low battery status, take off DI2 battery and charge it, otherwise it will affect to switch gear.

Backlight
1. Press R button to find the Light function, turn on/off the backlight.
2. When the computer is low battery status, the symbol "S" will appear to indicate the backlight function is at working status.
3. Press any button to lock on for 4 seconds each time, and the symbol will flash at the same time.

TROUBLE SHOOTING

PROBLEM	CHECK ITEMS	REMEDY
Main unit No display	1. Is the battery dead? 2. Is there incorrect battery installation?	1. Replace the battery. 2. Be sure that the positive pole of the battery is facing the battery cap.
No pairing icon display	1. No paired sensor symbol on display 2. Does triangle of the paired sensor symbol disappear? 3. Are the magnet and the Transmitter in the correct position? 4. Is the wheel circumference setting correct?	1. Go to setting mode for pairing the sensor again. 2. Please reset the R button 2sec for repair computer will automatically scan paired sensor again. 3. Refer to the installation manual and correct the positions and gaps. 4. Refer to "Wheel Circumference Measurement and Setting" and enter a correct value.
Paired sensor symbol does not be displayed or wrong displayed	5. Is the sensing distance between the main unit and the sensor too long? 6. Is the battery for the sensor nearly exhausted?	5. Refer to the installation manual and adjust the distance between the main unit and the sensor or adjust the angle of the sensor. 6. Replace the battery with a new one.
Altitude not displayed or wrong displayed	1. Did you calibrate the altitude before riding? 2. Is the hole for measuring the air pressure on the bottom of the main unit clean?	1. Refer to "Overview of Button Operation" and calibrate the altitude before each ride. 2. Always keep the hole for measuring the air pressure clean. Do not poke anything into the hole to avoid damage.
Irregular display		1. Refer to "Data Setting Mode" and initiate the computer again.
LCD is black	Did you expose the main unit to the direct sunlight for a long time when it was not in use?	Put the main unit in the shade to let it return to normal state.
Display is slow	Is the temperature below 0°C (32°F)?	Unit will return to normal state when the temperature rises.

PRECAUTIONS

- Don't leave the main unit exposed to direct sunlight when not riding the bike.
- Don't disassemble the main unit or its accessories.
- Check relative position and gap of sensor, magnet and main unit periodically.
- Don't use thinner, alcohol or benzene to clean the main unit or its accessories when they become dirty.
- Remember to pay attention to the road while riding.

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- . Reorient or relocate the receiving antenna.
- . Increase the separation between the equipment and receiver.
- . Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- . Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example - use only shielded interface cables when connecting to computer or peripheral devices).

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
