ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC CFR 47 Part 2, FCC CFR 47 Part 25 and Industry Canada RSS-170. The sample tested was found to comply with the requirements defined in the applied rules.

REPORT SUMMARY

FCC and Industry Canada Testing of the
Inmarsat Global Ltd IsatPhone2

In accordance with FCC CFR 47 Part 2, FCC CFR 47 Part 25 and Industry Canada RSS-170

1.1 INTRODUCTION

The information contained in this report is intended to show verification of the FCC and Industry Canada Testing of the Inmarsat Global Ltd IsatPhone2 to the requirements of FCC CFR 47 Part 2, FCC CFR 47 Part 25 and Industry Canada RSS-170.

Objective	To perform FCC and Industry Canada Testing to determine the Equipment Under Test's (EUT's) compliance with the Test Specification, for the series of tests carried out.
Manufacturer	Inmarsat Global Ltd
Model Number(s)	IsatPhone2
Serial Number(s)	IX40100471
Number of Samples Tested	1
Test Specification/Issue/Date	FCC CFR 47 Part 2 (2012) FCC CFR 47 Part 25 (2012) Industry Canada RSS-170 (2011)
Incoming Release Date	Declaration of Build Status 17 November 2013
Disposal Reference Number Date	Held Pending Disposal Not Applicable Not Applicable
Order Number Date	57-00098-01/1 30 August 2013
Start of Test	23 October 2013
Finish of Test	4 November 2013
Name of Engineer(s)	G Lawler A Galpin
Related Document(s)	ANSI C63.4: 2003

1.2 BRIEF SUMMARY OF RESULTS

A brief summary of the tests carried out in accordance with FCC CFR 47 Part 2, FCC CFR 47 Part 25 and Industry Canada RSS-170 is shown below.

Section	Spec Clause			Test Description	Result	Comments/Base Standard
	Pt 2	Pt 25	RSS-170			
Inmarsat

Note: This document has been prepared to enable manufacturers with no mechanism for producing their own Declaration of Build Status, to declare the build state of the equipment submitted for test.

No responsibility will be accepted by TÜV SÜD Product Service as to the accuracy of the information declared in this document by the manufacturer.

Product Service

1.4 PRODUCT INFORMATION

1.4.1 Technical Description

The Equipment Under Test (EUT) was a Inmarsat Global Ltd IsatPhone2. A full technical description can be found in the manufacturer's documentation.

1.5 TEST CONDITIONS

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure.

The EUT was powered from a 3.7 V DC supply.

FCC Accreditation
90987 Octagon House, Fareham Test Laboratory

Industry Canada Accreditation
IC2932B-1 Octagon House, Fareham Test Laboratory

1.6 DEVIATIONS FROM THE STANDARD

No deviations from the applicable test standard were made during testing.

1.7 MODIFICATION RECORD

Modification 0 - No modifications were made to the test sample during testing.

Industry Canada RSS-170, Clause 5.2

2.1.2 Equipment Under Test and Modification State

IsatPhone2 S/N: IX40100471 - Modification State 0

2.1.3 Date of Test

28 October 2013 & 29 October 2013

2.1.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.1.5 Test Procedure

The EUT was connected to an FSQ spectrum analyser via a cable and 30 dB attenuator. The EUT was configured to transmit a modulated carrier at maximum power using customer supplied test scripts.

The trace was set to max hold until a sufficient number of sweeps was observed. Measurements were made over 145.75 symbols. The VSA function was selected on the Spectrum Analyser and the result and the trace were recorded.

2.1.6 Environmental Conditions

Ambient Temperature	23.0 - 24.6°C
Relative Humidity	34.2 - 37.5%

IsatPhone2 S/N: IX40100471 - Modification State 0

2.2.3 Date of Test

24 October 2013 & 3 November 2013

2.2.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.2.5 Test Procedure

Emissions Mask

The EUT was connected to a spectrum analyser via 30dB of attenuation. The RBW was set to 3 kHz and the VBW to 10 kHz. The path loss was measured between the spectrum analyser and the EUT and entered as a reference level offset. Added to this offset was a correction factor of 1.25dB to account for the used RBW of 3 kHz instead of 4 kHz as defined in 25.202(f). The reference level was established by measuring the wideband power using over the burst length, using the Time Domain Power function on the spectrum analyser. The emission mask was based on an authorised bandwidth of 100 kHz as defined by the satellite service provider. Measurements of the emission mask were performed using an RMS detector with trace averaging over 50 sweeps with a gated trigger ensuring averaging was only performed with the transmit signal active. Measurements were performed on bottom, middle and top channels. The plots are on the following pages.

For conducted testing, in accordance with Part 25.202(f) the spurious conducted emissions from the antenna terminal were measured. The transmitter output power was attenuated using a combination of filters and attenuators and the frequency spectrum investigated from 9 kHz to 17 GHz. The EUT was set to transmit on full power. The spectrum analyser detector was set to Max Hold. (Worst case)

The maximum path loss was used as the reference level offset to ensure worst case results.

For radiated testing, a preliminary profile of the spurious radiated emissions was obtained up to the 10th harmonic by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

Product Service

Using the information from the preliminary profiling of the EUT, the list of emissions was then confirmed or updated under Alternative Open Site conditions. Emission levels were maximised by adjusting the antenna height, antenna polarisation and turntable azimuth.

The EUT was set to transmit on maximum power on the bottom, middle and top channels.

For any emissions found the EUT was then removed from the chamber and replaced with a substitution antenna. Using a signal generator the level was adjusted to achieve the same value on the measuring instrument as previously recorded with the EUT. The final result was determined by a calculation using the signal generator level, antenna gain and cable loss.

The measurements were performed at a 3m distance unless otherwise stated.

Limit Clause FCC CFR 47, 25.202(f) and RSS-170, 5.4.3.1

The average power of unwanted emissions shall be attenuated below the average output power, P(dBW), of the transmitter, as specified below:

- 1) 25 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 50%, up to and including 100% of the occupied bandwidth;
- 2) 35 dB in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 100%, up to and including 250% of the occupied bandwidth;
- 3) $43 + 10 \log p$ (watts) in any 4 kHz band, the centre frequency of which is offset from the channel frequency by more than 250% of the occupied bandwidth.

2.3 POWER LIMITS

2.3.1 Specification Reference

FCC CFR 47 Part 25, Clause 25.204
Industry Canada RSS-170, Clause 5.3

2.3.2 Equipment Under Test and Modification State

IsatPhone2 S/N: IX40100471 - Modification State 0

2.3.3 Date of Test

23 October 2013 & 3 November 2013

2.3.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.3.5 Test Procedure

For conducted power, the EUT was connected to a spectrum analyser via a cable and 30dB attenuator. The path loss was measured and entered as a reference level offset into the instrumentation. The transmit power was measured over the whole burst due to its length being less than 100ms. The average power was measured with modulation on bottom, middle and top channels.

For radiated power, the EUT was transmitted at maximum power via a cable to the Spectrum Analyser. The Analyser settings were adjusted to display the resultant trace on screen and a resolution bandwidth and video bandwidth of 1 MHz were used to perform the measurement. The level on the spectrum analyser was maximised by rotating the EUT through 360° and a height search of the measuring antenna. A substitution was then performed using a suitable calibrated antenna and signal generator.

This level was maximised by adjusting the height of the measuring antenna once more. The level from the signal generator was then adjusted to achieve the same raw result as with the EUT. This level was then corrected to account for cable loss and antenna factor.

A calculation was then performed to obtain the final figure.

2.3.6 Environmental Conditions

Multimeter	White Gold	WG022	190	12	28-Oct-2014
Attenuator (10dB, 10W)	Texscan	HFP-50N	468	12	27-Jun-2014
GPS Frequency Standard	Rapco	GPS-804/3	1312	6	24-Jan-2014
Power Supply	Iso-tech	IPS 2010	2439	-	O/P Mon
Spectrum Analyser	Rohde & Schwarz	FSQ26	3545	12	4-Jul-2014
Attenuator (10dB, 50W)	Aeroflex / Weinschel	47-10-34	3166	12	12-Sep-2014
Hygrometer	Rotronic	I-1000	3220	12	16-Jul-2014
Attenuator (10dB, 20W)	Lucas Weinschel	1	3225	12	11-Dec-2013
Section 2.2 - Emission Limitations					
Multimeter	White Gold	WG022	190	12	28-Oct-2014
Antenna (Double Ridge Guide, 1GHz-18GHz)	EMCO	3115	234	12	3-Apr-2014
Antenna (Double Ridge Guide, 1GHz-18GHz)	EMCO	3115	235	12	9-Nov-2013
Antenna (Bilog)	Schaffner	CBL6143	287	24	18-Jan-2014
Attenuator (10dB, 10W)	Texscan	HFP-50N	468	12	27-Jun-2014
Filter (High Pass)	Lorch	SHP7-7000-SR	566	12	20-Feb-2014
GPS Frequency Standard	Rapco	GPS-804/3	1312	6	24-Jan-2014
Crystal Detector	Hewlett Packard	8470B	1320	12	3-Jun-2014
Pre-Amplifier	Phase One	PS04-0086	1533	12	O/P MON
Screened Room (5)	Rainford	Rainford	1545	36	25-Dec-2013
Turntable Controller	Inn-Co GmbH	CO 1000	1606	-	TU
Power Supply	Iso-tech	IPS 2010	2439	-	O/P Mon
Spectrum Analyser	Rohde & Schwarz	FSU26	2747	12	10-Dec-2013
Filter (Hi Pass)	Lorch	9HP7-7000-SR	2833	12	1-Feb-2014
Attenuator (10dB, 50W)	Aeroflex / Weinschel	47-10-34	3166	12	12-Sep-2014
Signal Generator (10MHz to 40GHz)	Rohde & Schwarz	SMR40	3171	12	10-Sep-2014
Hygrometer	Rotronic	I-1000	3220	12	16-Jul-2014
Attenuator (10dB, 20W)	Lucas Weinschel	1	3225	12	11-Dec-2013
Function Generator	Thurlby Thandar Instruments	TG 315	3240	-	TU
EMI Test Receiver	Rohde & Schwarz	ESU40	3506	12	22-Oct-2014
3 GHz High Pass Filter	K&L Microwave	11SH10-3000/X18000-O/O	3552	12	1-Feb-2014
7m Armoured RF Cable	SSI Cable Corp.	1501-13-13-7m WA(-)	3600	-	TU
9m RF Cable (N Type)	Rhophase	NPS-2303-9000-NPS	3791	-	TU
Tilt Antenna Mast	maturo GmbH	TAM 4.0-P	3916	-	TU
Mast Controller	maturo GmbH	NCD	3917	-	TU

Attenuator (10dB, 20W)	Lucas Weinschel	1	3225	12	11-Dec-2013

TU – Traceability Unscheduled

O/P MON – Output Monitored with Calibrated Equipment

3.2 MEASUREMENT UNCERTAINTY

For a 95% confidence level, the measurement uncertainties for defined systems are:-

Test Discipline	MU
Power Limits	Conducted: ± 0.70 dB Radiated: ± 6.3 dB
Emission Limitations	Conducted: ± 3.08 dB Radiated: 30 MHz to 1 GHz: ± 5.1 dB 1 GHz to 17 GHz: ± 6.3 dB
Limits on Emissions from Mobile Earth Stations for Protection of Aeronautical Radionavigation-Satellite Service	± 3.08 dB
Frequency Tolerance	± 3.54 Hz
Occupied Bandwidth	± 16.74 kHz
Modulation Characteristics	-
