1.3 Brief Summary of Results

A brief summary of the tests carried out in accordance with FCC CFR 47 Part 96 per KDB935210 D05 for CMRS Industrial Booster devices is shown below.

Section	Spec Clause per KDB935210 D05	Test Description	Results
2.1	3.2	AGC Threshold	Compliant
2.2	3.3	Out-of-Band Rejection	Compliant
2.3	3.4	Input-versus-Output Signal Comparison	Compliant
2.4	3.5	Input/Output Power and Amplifier/Booster Gain	Compliant
2.5	3.6	Measuring out-of-band/out-of-block (including intermodulation) and spurious emissions	Compliant
-	3.7	Frequency Stability Measurements	N/A
2.6	3.8	Spurious Emissions Radiated Measurements	Compliant
Section	Spec Clause per §96 Subpart E	Comments/Results	
-	§96.39(a) to (h)	EUT is an industrial booster/non-consumer repeater and not a CBSD. Requirements under these Clauses does not apply	
-	§96.41(c) (d) (f) and (g)		
	§96.43/§96.45/ §96.47		
-	§96.41(a)	EUT complies with the digital modulation requirement as it uses LTE B48 TDD	
-	§96.41(b)	Power limits compliance is verified per Sections 3.2 and 3.5 of KDB935210 D05 above	
-	§96.41(e)	Emissions compliance is verified per Section 3.6 of KDB935210 D05 above	
-	§96.51	Compliance with RF safety is a separate exhibit as part of the application for equipment authorization	

N/A Not Applicable. The EUT does not alter the input signal in any way. Frequency Stability test is not required.

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

Product Service

1.4 Product Information

1.4.1 Technical Description

The Equipment Under Test (EUT) was a Nextivity Inc., Cel-Fi Q4K-CBRS Cellphone Signal Booster. The EUT is a WCDMA/LTE “Provider-Specific” Signal Booster to improve voice and data cellular performance in large enterprise environments. The EUT is capable to support up to Four (4) carriers (via separated donor antenna ports).

The EUT consists of two separate units: the Network Unit (NU), and the Coverage Unit (CU). The NU comprises a transmitter and receiver which communicate with the cell tower and the CU. CU comprises a transmitter and receiver which communicate with the User Equipment (e.g., Cell phone) and the NU. Figure below illustrates the typical application. The system operates with the need to install external antennas.

Users place the NU in an area with the strongest signal from the carrier networks. The CUs are then either placed in the center of the home or office, or in the area where the best signal quality is most needed. The NU and CU are placed at varying distances apart and are communicated via Ethernet cables.

One NU can connect up to Six (6) CUs via Ethernet Cat 5 cables. The NU transmits and receives Cellular signals from the base station and operates similar to a cellular handset. The CU transmits and receives signals with the cellular handset and operates on frequencies similar to the cellular base station. CU coverage area >10m

NU includes an FCC certified Cellular modem. With the use of the modem, it allows the system to access internet and for product registration, software updates, capturing and displaying details metrics of the system.

IC: N/A

Figure 3 – Downlink test configuration in EUT test mode

1.5 Deviations from the Standard

There were no deviations made during testing from the applicable test standard or test plan.

1.6 EUT Modification Record

The table below details modifications made to the EUT during the test program. The modifications incorporated during each test are recorded on the appropriate test pages.

Modification State	Description of Modification still fitted to EUT	Modification Fitted By	Date Modification Fitted
0	As supplied by the manufacturer	-	-

1.7 Test Methods

All measurements contained in this report were conducted as per KDB935210 D05 Indus Booster Basic Meas v01r04 (Measurements Guidance for Industrial and Non-Consumer Signal Booster, Repeater, and Amplifier Devices).

1.8 Test Location

TÜV SÜD America conducted the following tests at our San Diego CA, Test Laboratory's.

Office Address:

TÜV SÜD America Inc. (Mira Mesa)

10040 Mesa Rim Road, San Diego, CA 92121-2912 (32.901268,-117.177681).
Phone: (858) 678 1400 Fax: (858) 546 0364.

TÜV SÜD America Inc. (Rancho Bernardo)

16936 Via Del Campo, San Diego, CA 92127-1708 (33.018644,-117.092409).
Phone: (858) 678 1400 Fax: (858) 546 0364.

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

1.9 Test Facility Registration

1.9.1 FCC – Designation No.: US1146

TÜV SÜD America Inc. (San Diego), is an accredited test facility with the site description report on file and has met all the requirements specified in §2.948 of the FCC rules. The acceptance letter from the FCC is maintained in our files and the Designation is US1146.

1.9.2 Innovation, Science and Economic Development Canada (ISED) Registration No.: 3067A-1 & 22806-1

The 10m Semi-anechoic chamber of TÜV SÜD America Inc. (San Diego Rancho Bernardo) has been registered by Certification and Engineering Bureau of Innovation, Science and Economic Development Canada for radio equipment testing with Registration No. 3067A-1.

The 3m Semi-anechoic chamber of TÜV SÜD America Inc. (San Diego Mira Mesa) has been registered by Certification and Engineering Bureau of Innovation, Science and Economic Development Canada for radio equipment testing with Registration No. 22806-1.

1.9.3 BSMI – Laboratory Code: SL2-IN-E-028R (US0102)

TÜV Product Service Inc. (San Diego) is a recognized RADIO testing laboratory by the BSMI under the MRA (Mutual Recognition Arrangement) with the United States. Accreditation includes CNS 13438 up to 6GHz.

1.9.4 NCC (National Communications Commission - US0102)

TÜV SÜD America Inc. (San Diego) is listed as a Foreign Recognized Telecommunication Equipment Testing Laboratory and is accredited to ISO/IEC 17025 (A2LA Certificate No.2955.13) which under APEC TEL MRA Phase 1 was designated as a Conformity Assessment Body competent to perform testing of equipment subject to the Technical Regulations covered under its scope of accreditation including RTTE01, PLMN01 and PLMN08 for TTE type of testing and LP0002 for Low-Power RF Device type of testing.

1.9.5 VCCI – Registration No. A-0280 and A-0281

TÜV SÜD America Inc. (San Diego) is a VCCI registered measurement facility which includes radiated field strength measurement, radiated field strength measurement above 1GHz, mains port interference measurement and telecommunication port interference measurement.

1.9.6 RRA – Identification No. US0102

TÜV SÜD America Inc. (San Diego) is National Radio Research Agency (RRA) recognized laboratory under Phase I of the APEC Tel MRA.

1.9.7 OFCA – U.S. Identification No. US0102

TÜV SÜD America Inc. (San Diego) is recognized by Office of the Communications Authority (OFCA) under Appendix B, Phase I of the APEC Tel MRA.

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

2 Test Details

2.1 AGC Threshold

2.1.1 Specification Reference

KDB935210 D05, Clause 3.2

2.1.2 Standard Applicable

Testing at and above the AGC threshold will be required. The AGC threshold shall be determined by applying the procedure of 3.2 (KDB935210 D05).

2.1.3 Equipment Under Test and Modification State

Serial No: 110222000051 and 481222000175 / Test Configuration A and B

2.1.4 Date of Test/Initial of test personnel who performed the test

December 27, 2022 / MRG

2.1.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.1.6 Environmental Conditions

Test performed at TÜV SÜD America Inc. Mira Mesa facility.

Ambient Temperature	24.4 °C
Relative Humidity	33.3 %
ATM Pressure	100.5 kPa

2.1.7 Additional Observations

- This is conducted Test. Test procedure is per Section 5.2.4.5 of ANSI C63.26 2015.
- The signal generator was set to transmit LTE B48 TDD signal with the corresponding BW.
- Only the worst-case channel presented.

2.1.8 Test Results

BW	Mode	AGC Threshold (dBm)	Max. Cable + Antenna Gain (dBi)	EIRP Limit (dBm/10MHz)
5 MHz	Uplink	18.87	4.13	23.00
	Downlink	9.82	10.17	23.00

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

Product Service

BW	Mode	AGC Threshold (dBm)	Cable + Antenna Gain (dBi)	EIRP Limit (dBm)
10 MHz	Uplink	18.32	4.68	23.00
	Downlink	11.99	11.01	23.00
15 MHz	Uplink	17.47	5.53	23.00
	Downlink	13.08	9.92	23.00

2.2 Out-of-Band Rejection

2.2.1 Specification Reference

KDB935210 D05, Clause 3.3

2.2.2 Standard Applicable

A signal booster shall reject amplification of other signals outside of its passband. Adjust the internal gain control of the EUT (if so equipped) to the maximum gain for which equipment certification is sought.

2.2.3 Equipment Under Test and Modification State

Serial No: 110222000051 and 481222000175 / Test Configuration A and B

2.2.4 Date of Test/Initial of test personnel who performed the test

December 07, 2022 / MRG

2.2.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.2.6 Environmental Conditions

Test performed at TÜV SÜD America Inc. Mira Mesa facility.

Ambient Temperature	25.1 °C
Relative Humidity	40.5 %
ATM Pressure	101.0 kPa

2.2.7 Additional Observations

- This is a conducted test. Test procedure is per Section 3.3 of KDB935210 D05.
- A CW sweep to be injected at the input of the EUT is programmed per Section 3.3(b).
- The CW level is verified to be 20dB above the noise floor.
- 20MHz BW is presented as worst-case configuration as the frequency range to be investigated is $\pm 250\%$ of the passband.
- The 20dB BW of the passband is monitored and compared before and after the application of the CW sweep.
- No change on the 20dB BW of the passband observed when the CW sweep is applied.
- T1 and T2 points of the 20dB BW are the focal points for this measurement.

2.3 Input-versus-Output Signal Comparison

2.3.1 Specification Reference

KDB935210 D05, Clause 3.4

2.3.2 Standard Applicable

A 26 dB bandwidth measurement shall be performed on the input signal and the output signal; alternatively, the 99% OBW can be measured and used.

2.3.3 Equipment Under Test and Modification State

Serial No: 110222000051 and 481222000175 / Test Configuration A and B

2.3.4 Date of Test/Initial of test personnel who performed the test

December 08, 2022 / MRG

2.3.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.3.6 Environmental Conditions

Test performed at TÜV SÜD America Inc. Mira Mesa facility.

Ambient Temperature	23.8 °C
Relative Humidity	38.7 %
ATM Pressure	101.1 kPa

2.3.7 Additional Observations

- This is a conducted test. Test procedure is per Section 3.4 of KDB935210 D05.
- For this test, the applicable signal type (LTE B48 TDD) is used instead of an AWGN signal.
- Following the procedure per Section 3.4, the spectral plot of the input signal is compared with the spectral plot of the output signal affirming they are similar in passband, rolloff characteristic features and relative spectral locations.

2.3.8 Test Results

Condition	Mode	BW	99% OBW Characteristic		
			Passband comparison between Input and Output Signal	Rolloff characteristic comparison between Input and Output Signal	Relative spectral locations comparison between Input and Output Signal

2.4 Mean Output Power and Amplifier/Booster Gain

2.4.1 Specification Reference

KDB935210 D05, Clause 3.5

2.4.2 Standard Applicable

The guidance is provided for performing the measurement of mean input and output power of a CMRS non-consumer amplifier, repeater, or industrial booster, to compute the gain of the device.

2.4.3 Equipment Under Test and Modification State

Serial No: 110222000051 and 481222000175 / Test Configuration A and B

2.4.4 Date of Test/Initial of test personnel who performed the test

December 12, 2022 / MRG

2.4.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.4.6 Environmental Conditions

Test performed at TÜV SÜD America Inc. Mira Mesa facility.

Ambient Temperature 21.8 °C
Relative Humidity 40.3 %
ATM Pressure 100.9 kPa

2.4.7 Additional Observations

- This is a conducted test. Test procedure is per Section 3.5 of KDB935210 D05.
- For this test, the applicable signal type (LTE B48 TDD) is used instead of an AWGN signal.
- Per power limits requirement of § 96.41, presented results are representative 10MHz BW.

2.4.8 Test Results

Mode	Test condition of output level	Gain (dB) = Output power (dBm) – Input power (dBm)		
		Input Power	Output Power	Gain
LTE B48 Uplink	≤ 0.5dB AGC threshold level	-83.22	14.87	98.09
	3dB above AGC threshold level	-80.22	17.48	97.70
	Input level set to achieve max gain	N/A. Max gain observed is when input level is ≤ 0.5dB AGC threshold level		
LTE B48 Downlink	≤ 0.5dB AGC threshold level	-86.24	11.67	97.91

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

Product Service

	3dB above AGC threshold level	-83.24	12.85	96.09
	Input level set to achieve max gain	N/A. Max gain observed is when input level is ≤ 0.5 dB AGC threshold level		
CW Uplink	≤ 0.5 dB AGC threshold level	-55.94	10.99	66.93
	3dB above AGC threshold level	-52.96	10.50	63.46
	Input level set to achieve max gain	N/A. Max gain observed is when input level is ≤ 0.5 dB AGC threshold level		
CW Downlink	≤ 0.5 dB AGC threshold level	-55.94	11.46	67.40
	3dB above AGC threshold level	-52.96	12.03	64.99
	Input level set to achieve max gain	N/A. Max gain observed is when input level is ≤ 0.5 dB AGC threshold level		

2.4.9 Sample Test Plots

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

Product Service

Input Power Uplink 3dB above AGC threshold level using CW

Input Power Uplink ≤ 0.5 dB AGC threshold level using LTE B48

To show level above the noise floor, input was adjusted by 25.96dB, actual input level: $-57.26\text{dBm} - 25.96\text{dB} = -83.22\text{dBm}$

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

Product Service

Output Power Downlink $\leq 0.5\text{dB}$ AGC threshold level using LTE B48

Output Power Uplink $\leq 3\text{dB}$ above AGC threshold level using LTE B48

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

2.5 Out-Of-Band/Out-Of-Block (Including Intermodulation) Emissions And Spurious Emissions

2.5.1 Specification Reference

KDB935210 D05, Clause 3.6
§ 96.39 Subpart E – Technical Rules (e)(1)(i) and (e)(2)

2.5.2 Standard Applicable

Except as otherwise specified in paragraph (e)(2) of this section, for channel and frequency assignments made by the SAS to CBSDs, the conducted power of any CBSD emission outside the fundamental emission bandwidth as specified in paragraph (e)(3) of this section (whether the emission is inside or outside of the authorized band) shall not exceed -13 dBm/MHz within 0-10 megahertz above the upper SAS-assigned channel edge and within 0-10 megahertz below the lower SAS-assigned channel edge. At all frequencies greater than 10 megahertz above the upper SAS assigned channel edge and less than 10 MHz below the lower SAS assigned channel edge, the conducted power of any CBSD emission shall not exceed -25 dBm/MHz. The upper and lower SAS assigned channel edges are the upper and lower limits of any channel assigned to a CBSD by an SAS, or in the case of multiple contiguous channels, the upper and lower limits of the combined contiguous channels.

Additional protection levels. Notwithstanding paragraph (e)(1) of this section, for CBSDs and End User Devices, the conducted power of emissions below 3540 MHz or above 3710 MHz shall not exceed -25 dBm/MHz, and the conducted power of emissions below 3530 MHz or above 3720 MHz shall not exceed -40 dBm/MHz.

Limits used for CMRS Non-Consumer Repeater and Industrial Booster Device:

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

2.5.3 Equipment Under Test and Modification State

Serial No: 110222000051 and 481222000175 / Test Configuration A and B

2.5.4 Date of Test/Initial of test personnel who performed the test

December 12 to 14, 2022 / MRG

2.5.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.5.6 Environmental Conditions

Test performed at TÜV SÜD America Inc. Mira Mesa facility.

Ambient Temperature	20.4 to 21.9 °C
Relative Humidity	35.6 to 45.2 %
ATM Pressure	100.0 to 100.7 kPa

2.5.7 Additional Observations

- This is a conducted test. Test procedure is per Section 3.6.2 and 3.6.3 of KDB935210 D05.
- For this test, the applicable signal type (LTE B48 TDD) is used instead of an AWGN signal for accuracy.
- The EUT port that host LTE B48 does not have multi band support. Intermodulation verification will not be performed.
- This is a two-part verification. Out-Of-Band/Out-Of-Block Emissions and Conducted Spurious Emissions.
- For Conducted Spurious Emissions, in order to satisfy the sweep points requirements, the investigation is performed in four frequency ranges:
 1. 9kHz up to lower band/block edge frequency minus 1 MHz
 2. Upper band/block edge frequency plus 1 MHz up to 15.701GHz
 3. 15.701GHz up to 27.701GHz
 4. 27.701GHz up to 39.701GHz

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A

2.5.8 Test Plots (out-of-band/out-of-block)

FCC ID: NU: YETI44-1M34CNU and CU: YETI41-RECU
IC: N/A
