

STATEMENT

Our company is currently applying for FCC/IC certification for the aircraft model

Product Name/Model: LSHS500TX

Two dongles share the same name and model, with internal component differences: the xBox version of the dongle has a mode switch and xBox decryption chip, while the Ps version does not have a switch and xBox decryption chip. Other circuit principles and layouts are the same. These changes will not affect the functionality of the wireless devices, We have prepared for xBox version of the dongle testing.
