

Test Report No. 9512306145

Applicant: Stratasys Ltd.

Equipment Under Test:

***RFID reader system for
Duplex Material Cabinet***

***From The Standards Institution
Of Israel
Industry Division
Electronics & Telematics Laboratory
EMC Branch***

Certificate Number: AT-1359

Test Report No.: 9512306145

Page 1 of 18 pages

Title: RFID reader system for Duplex Material Cabinet

Model: RFID reader BRD-08015, antenna board BRD-03012

Applicant:	Stratasys Ltd.
Address:	2 Holzman St., Science Park, P.O.B 2496, Rehovot 76124, Israel
Sample for test selected by:	The customer
The date of test:	22 February 2015

Description of Equipment Under Test (EUT):	RFID reader system for Duplex Material Cabinet
Model:	RFID reader BRD-08015, antenna board BRD-03012
Hardware version of radio unit	A
Software version of radio unit	1.1
Manufactured by:	Stratasys Ltd.

Reference Documents:

- ❖ CFR 47 FCC: Rules and Regulations; Part 15. "Radio frequency devices";
Subpart B: "Unintentional radiators" (2014).
Section 15.109. Radiated emission limits.
Subpart C: "Intentional radiators" (2014),
Section 15.207. Conducted limits
Section 15.209. "Radiated emission limits, general requirements".

This Test Report contains 19 pages
and may be used only in full.

This Test Report applies only to the specimen tested and may not
be applied to other specimens of the same product.

Position: Test Technician

Measurement uncertainty.

The test equipment has been calibrated according to its recommended procedures and is within the manufacturer's published limit of error.

The laboratory calibrates its standards by a third party (traceable to NIST, USA) on a regular basis according to equipment manufacturer requirements.

In the following table the uncertainty calculation is given.

Type of disturbance Test description	Calculated uncertainty U_{LAB}
Conducted emissions 150 kHz to 30 MHz	± 2.8 dB
Radiated disturbance electric field strength in a SAR at 3 m distance 30 MHz – 1.0 GHz	± 4.32 dB
electric field strength in a FAR at 3 m distance 1.0 GHz – 18 GHz	± 4.47 dB

Test Report No.: 9512306145

2. EUT Description and operation

2.1. General description:

* Note: the customer supplied all information in clause below.

The EUT is RFID transceiver on MSC2 board installed inside material resin cabinet of 3D printer. The Duplex Material cabinet contains 4 boards and 16 antennas. Product's main functions are read and write data from material container protected by RFID identification tags attached to the resin material container. Its intended use is to identify the type of resin. The RFID unit voltage is 5V (produced from the main 24VDC). Through RS-232 interface the RFID MCU (PIC16F876A) gets commands: Number of channel, read or write etc.

The RFID signal is generated by the RFID chip (HTRC11001).

This RF signal from RFID chip is directed to a MUX chip that switches the RF energy to only one of the four channel antennas at certain time.

RS-232 interface connected internally inside a 3D printer.

The test was done by simulating all antennas at maximum duty cycle.

Transmit frequency:	125 kHz
Type of modulation:	AM
Antenna type:	Loop coil mfr. Stratasys model. BRD-03012

The Duplex Material Cabinet and RFID unit block diagrams are shown in Figures 1 and 2. The EUT's views are shown in photos below.

2.2. Potential emission sources:

The potential emission sources are detailed in Table 1.

Table 1. Potential emission sources

Frequency	Location
125 kHz	RFID (derived from 16 MHz)
16 MHz crystal	RFID
33.3 MHz crystal	MSC board (CPLD)

2.3. EUT setup and operation:

Measurements were performed in continue transmission mode by simulating all channel antennas and using Max Hold mode.

3. Measurements, examinations and derived results

3.1. Location of the Test Site:

Radiated emission test was conducted at the EMC laboratory of the Standards Institution of Israel in Tel-Aviv.

3.2. Test condition:

Temperature: 22°C. Humidity: 53 %. Atmospheric pressure: 1009 mbar.

Test Report No.: 9512306145

Page 8 of 18 pages

Title: RFID reader system for Duplex Material Cabinet

Model: RFID reader BRD-08015, antenna board BRD-03012

3.3. Radiated emission test.

3.3.1. General:

Per FCC Part 15 subpart B, C Sections 15.109, 15.209

3.3.2. Radiated emission measurements procedure:

The radiated emission measurements were performed in the semi Anechoic chamber at the 3 m test distance. The EUT was installed on a turn - table. Measurements were performed with Active loop antenna at frequencies below 30 MHz and with Biconilog antenna above 30 MHz. The measurements were performed at each frequency that was founded previously. The levels were maximized by rotating turntable through 360° and changing antenna-to-EUT polarization from vertical to horizontal. The worse case result was noted in tables.

3.3.3. Radiated emission test results:

All received emissions from the RFID transmitter were found below FCC Part 15 Subpart C sections 15.209 and below FCC part 15.109 class A limit for digital part. Final result measurements are presented in table #2 in section 3.4.5 and table #3 section 3.6.2.

**Test Report No.: 9512306145****Page 9 of 18 pages****Title:** RFID reader system for Duplex Material Cabinet**Model:** RFID reader BRD-08015, antenna board BRD-03012

3.4. Test of field strength emission from intentional radiator.

3.4.1. General:

Per FCC Part 15 Subpart C section 15.209 (a).

3.4.2. Requirements:

The RFID operation frequency is 125 kHz.

The average field strength emission from intentional radiators operated on this frequency shall comply with the limit of section 15.209 (a).

Emission frequency MHz	Specified Field Strength limit of Fundamental $\mu\text{V/m@300m}$	Calculated Field Strength limit $\text{dB}\mu\text{V/m@3m}$
0.125	2400/F	105.6

Note: The field strength limit was calculated with 40 dB/decade linear distance extrapolation factor.

The field strength of any unwanted emissions shall not exceed the general radiated emission limits in § 15.209.

3.4.3. Test procedure:

The test was conducted according to clause 15.209.

3.4.4. Test summary:

The tested unit meets the standard requirement.

**Test Report No.: 9512306145****Page 10 of 18 pages****Title:** RFID reader system for Duplex Material Cabinet**Model:** RFID reader BRD-08015, antenna board BRD-03012**3.4.5. Test results:****Table # 2. Fundamental frequency test result**

Carrier frequency MHz	Peak amplitude dB μ V/m	Limit@ 3m dB μ V/m
0.125	77.1	105.6

For recorded fundamental frequency result see plot #1.

The received radiated emission result was found below the § 15.209 specified limit.

Investigation scans of spurious emission present in plots ## 2 and 3

**Plot # 1. Field strength of fundamental frequency 125 kHz.**

3.5. AC main conducted emissions test

Per FCC Part 15 subpart B Section 15.207

Test configuration:

The EUT as a part inside 3D printer was placed in a shielded room on reference ground plane (floor) at 80 cm from the LISN and any other metal part or surface of the room.

3.5.1. Test procedure:

First, initial scans were performed. Final measurements were performed at the frequencies where emission exceeded the tolerance limit.

Test equipment (EMI receiver) setup was as follow:

Initial scan:

Detector type	Peak
Mode	Max hold
Bandwidth	9 kHz

Measurements:

Detector type	Quasi-peak (CISPR), Average
Bandwidth	9 kHz

3.5.2. Test results:

All received emissions from EUT were found below FCC Part 15.207 limits (see plots ## 4, 5 below).

Test Report No.: 9512306145

**Test Report No.: 9512306145****Page 14 of 18 pages****Title:** RFID reader system for Duplex Material Cabinet**Model:** RFID reader BRD-08015, antenna board BRD-03012**3.6. Test of radiated emissions from unintentional radiator**

Per FCC Part 15 subpart B Section 15.109

3.6.1. Test procedure:

The EUT was on at normal performance.

First, initial scans were performed. Final measurements were performed according to clause 3.3.2.

Initial scan:

Detector type Peak
 Mode Max hold
 Bandwidth 120 kHz

Measurements:

Detector type Quasi-peak (CISPR)
 Bandwidth 120 kHz

3.6.2. Radiated emission test results:

All received emissions were found below FCC Part 15 class A limit and presented in table 3 below.

Table 3. Radiated emission test results
Subpart B class A 3 m distance.

Frequency MHz	Antenna Polariz. V/H	Antenna Height m	Turn- table Angle (°)	Emission Level Note 1 dB μ V/m	Limit @ 3 m dB μ V/m	Margin dB	Results
31.5	V	1.0	249	35.5	49.5	14	Complies
50.0	V	1	241	43.0	49.5	6.5	Complies
