1.Summary

This report summarizes the electrical results of the our antenna to support the project E115. The test fixture is made for further testing, which is show below:

2.General Description

2.1Antenna Components/Part revisions

The antenna part number is T: A

2.2Definitions

VSWR: Voltage Standing Wave Rate

TRP: total radiated power

TIS: total isotropic sensitivity

3. Electrical Performance

3.1 VSWR (Test in free space)

3.2 Gain&Efficiency

Frequency/MHz	Efficiency/dB	Gain/dBi

remarks: 1. The dimensions marked in the figure are key control dimensions, and all trial production or mold samples need to be measured. 2. The dimensions marked with "*" are mandatory for IGC testing; Unmarked tolerances shall be controlled by referring to the tolerance table within the frame: 3. The line is less than or equal to 0.3mm and adopts exposure and level open technology. 4. Golden finger electroplating Ni: 2-7um Au: greater than 0.03um (salt spray must be passed for 48 hours). 5. The appearance should be smooth and not out to the internal circuit; exposed copper, etc. 6. The gold-plated area requires a 48 hour salt spray test (excluding OSP process). 7. All materials must meet RoHS 2.0+Pbch requirements. 8. The packaging method adopts single PCS semi cutting for shipment. 9. Materials cannot be changed arbitrarily without confirmation from MMW company.
