Test setup	 The diagram illustrates the test setup. On the left, a green rectangular box represents the 'Base Station'. A line connects it to a blue rectangular box on the right, which is enclosed within a dashed-line rectangle representing the 'Thermal Chamber'.																																		

Procedure	A communication link was established between EUT and base station. The frequency error was monitored and measured by base station under variation of ambient temperature and variation of primary supply voltage. Limit: The frequency stability of the transmitter shall be maintained within $\pm 0.00025\%$ ($\pm 2.5\text{ppm}$) of the center frequency.

A photograph of a blue printed circuit board (PCB) of a mobile phone, showing various components like the camera lens, microphone, SIM card slot, and battery cover latch. The PCB is placed next to a ruler for scale. The ruler shows measurements in millimeters (0 to 100 mm) and centimeters (0 to 10 cm). The PCB has several labels and markings, including "BSI81360" and "BOSI TOOLS". The components visible include a camera lens, a microphone, a SIM card slot, a battery cover latch, and various electronic components like capacitors, resistors, and integrated circuits. The PCB is placed on a blue surface.
