Address:	701 East Joppa Rd., Towson, MD 21286 410-716-3563
Contact Name:	Kirwan Magdamo

2.2 - Equipment Under Test (EUT) Information

The following information has been supplied by the applicant.

Product Name:	DeWalt Bluetooth Tag
Model Number:	Engineering FCC Test Sample
Serial Number:	Engineering FCC Test Sample

2.3 - Associated Antenna Description

The antenna is a PCB-printed PIFA antenna. This antenna has a peak gain of 0 dBi.

2.4 - Product Description

The Bluetooth DeWalt Tag is designed for tracking and locating professional power tools, equipment, and machines using the DeWalt Tool Connect app which is capable of connecting with mobile devices that support Bluetooth Smart technology. The features of the Tag include a sealed enclosure with an IP68 rating, an over molded push button to initiate pairing to a mobile device, a blue LED to locate which Tag is currently connected to the mobile device, and various mounting options. The Tag is powered by a 3.0V CR2450 coin cell with an expected battery life of 3 years.

EXHIBIT 4. CONFORMANCE SUMMARY

When tested between September 2nd and October 26 of 2016, it was determined that the EUT, the Dewalt Bluetooth Tag, was found to meet the minimum distance and is exclude from SAR evaluation using the following guidance:

FCC KDB 447498 v06
RSS-102 Issue 5

Any modifications made to the EUT after the specified test date(s) will invalidate the data herein.

If some emissions measurements are seen to be within the uncertainty value, as listed in Appendix C there is a possibility that this unit may not meet the required limit specification if subsequently tested.

EXHIBIT 5. POWER OUTPUT (CONDUCTED): 15.247(b)

Test Engineer(s): Shane Dock

5.1 - Method of Measurements

The conducted RF output power of the EUT was measured at the antenna port using a short RF cable along with an attenuator as protection for the spectrum analyzer. The loss from the cable and the attenuator were added on the analyzer as gain offset settings thereby allowing direct measurements without the need for any further corrections. The unit was configured to run in a continuous transmit mode, while being supplied with typical data as a modulation source.

Measurement procedure used was FCC OET KDB 558074 D01 Measurement Guidance v03r05 section 9.1.1.

Peak Conducted Output Power Limit = 1 Watt (30 dBm).

5.2 - Test Data

Frequency (MHz)	2402	2440	2480
Conducted Pout (dBm)	3.28	3.67	3.54

The data reported includes all necessary correction factors. These correction factors are loaded onto the EMI receiver when measurements are performed.

Reported Measurement data = Raw receiver measurement (dBm) + Cable factor (dB) + Miscellaneous factors when applicable (dB).

Generic example of reported data at 2440 MHz:

Reported Measurement data = 8.55 (raw receiver measurement in dBm) + 0.85 (cable factor in dB) = 9.4 (dBm).

EXHIBIT 6. RF Exclusion Calculation

Test Engineer(s): Shane Dock

6.1 – Exemption equation & limits

FCC:

SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 20 cm

1-g SAR test exclusion threshold equation:

$$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] * [\sqrt{f(\text{GHz})}] \leq 3.0$$

10-g SAR test exclusion threshold equation:

$$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] * [\sqrt{f(\text{GHz})}] \leq 7.5$$

RSS 102:

Prepared For: Stanley Black and Decker	Model #: Engineering FCC Test Sample	Report #: 316161
EUT: DeWalt Bluetooth Tag	Serial #: Engineering FCC Test Sample	LSR Job #: C-2635

6.1 – Exemption calculation

FCC:

Frequency = 2440MHz

Output Power = 5.67 dBm (3.67 + 2 dB for tune up tolerance)

Antenna gain = 0 dBi

EIRP = 5.67 dBm = 3.69 mW

Minimum separation distance (5mm) for SAR test exclusion (1g tissue) = $(3.69 / 5) * [\sqrt{2.44}]] =$
1.15 ≤ 3.0

RSS 102:

Frequency = 2440MHz

Output Power = 5.67 dBm (3.67 + 2 dB for tune up tolerance)

Antenna gain = 0 dBi

EIRP = 5.67 dBm = 3.69 mW

Minimum separation distance for SAR test Exclusion (1g tissue) **≤ 5mm** (based on table 1 of RSS 102)

Limit interpolated at 2440 MHz = 4.41 mW
