3. TEST METHODOLOGY

The measurement procedure described in FCC KDB 789033 D02 General UNII Test Procedures v01r04 dated May 2, 2017 entitled “ Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Oart15, Subpart E” and ANSI C63.10-2013 ‘the American National Standard for Testing Unlicensed Wireless Devices’ were used in the measurement.
For 802.11ac, KDB644545 D03 v01 dated August 14, 2014 if applicable.

3.1 EUT CONFIGURATION

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

3.2 EUT EXERCISE

The EUT was operated in the engineering mode to fix the Tx frequency that was for the purpose of the measurements. According to its specifications, the EUT must comply with the requirements of the Section 15.207, 15.209 and 15.407 under the FCC Rules Part 15 Subpart E.

3.3 GENERAL TEST PROCEDURES

Conducted Emissions

The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in Section Section 6.2 of of ANSI C63.10. (Version : 2013) Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using CISPR Quasi-peak and average detector modes.

Radiated Emissions

The EUT is placed on the turntable which is 0.8 m height from the ground floor for below 1GHz. And the EUT is placed on the turntable which is 1.5m height from the ground floor for above 1GHz with absorbers between the EUT and receive antenna. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3 m away from the receiving antenna, which varied from 1 m to 4 m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter (EUT) was rotated through three orthogonal axes according to the requirements in Section 8 of ANSI C63.10 (Version: 2013). To record the final measurements, the analyzer detector function was set to CISPR quasi-peak mode and the bandwidth of the spectrum analyzer was set to 120 kHz for frequencies below 1 GHz or 1 MHz for frequencies above 1 GHz. For average measurements above 1 GHz, the analyzer was set to peak detector with a reduced VBW setting(RBW = 1 MHz, VBW = 1/T Hz, where T = Pulse width).

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

Conducted Antenna Terminal

See Section from 8.1 to 8.4.(KDB 789033 D02 v01r04)

3.4 DESCRIPTION OF TEST MODES

The EUT has been tested under operating condition. Test program used to control the EUT for staying in continuous transmitting and receiving mode is programmed.

Channel low, mid and high with highest data rate (worst case) is chosen for full testing.

4. INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipments, which is traceable to recognized national standards

5. FACILITIES AND ACCREDITATIONS

5.1 FACILITIES

The SAC(Semi-Anechoic Chamber) and conducted measurement facility used to collect the radiated data are located at 1726 Ringwood Avenue, San Jose, CA 95131 USA. The site is constructed in conformance with the requirements of ANSI C63.4. (Version :2014) and CISPR Publication 22. Detailed description of test facility has been accredited by NVLAP, designated by NIST(US0125)

5.2 EQUIPMENT

Radiated emissions are measured with one or more of the following types of Linearly polarized antennas: tuned dipole, bi-conical, log periodic, bi-log, and/or ridged waveguide, horn. Spectrum analyzers with pre-selectors and quasi-peak detectors are used to perform radiated measurements.

Conducted emissions are measured with Line Impedance Stabilization Networks and EMI Test Receivers. Calibrated wideband preamplifiers, coaxial cables, and coaxial attenuators are also used for making measurements.

All receiving equipment conforms to CISPR Publication 16-1, "Radio Interference Measuring Apparatus and Measurement Methods."

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

6. ANTENNA REQUIREMENTS

According to FCC 47 CFR §15.203:

“An intentional radiator antenna shall be designed to ensure that no antenna other than that furnished by the responsible party can be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.”

* The antenna is a Flex Antenna attached to the PCB using a uFL connector and 4” cable.

*The E.U.T Complies with the requirement of §15.203

8. TEST RESULT

8.1 DUTY CYCLE

The zero-span mode on a spectrum analyzer or EMI receiver, if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the on and off times of the transmitted signal. Set the center frequency of the instrument to the center frequency of the transmission. Set $RBW \geq EBW$ if possible; otherwise, set RBW to the largest available value. Set $VBW \geq RBW$. Set detector = peak or average. The zero-span measurement method shall not be used unless both RBW and VBW are $> 50/T$, where T is defined in section B)1)a), and the number of sweep points across duration T exceeds 100. (For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring duty cycle shall not be used if $T \leq 16.7$ microseconds.)

■ TEST CONFIGURATION

■ TEST PROCEDURE

The transmitter output is connected to the Spectrum Analyzer. We tested according to the zero-span measurement method, (B.2 in KDB 789033 D02 v01r04)

The largest available value of RBW is 8 MHz and VBW is 50 MHz. The zero-span method of measuring duty cycle shall not be used if $T \leq 6.25$ microseconds. ($50/6.25 = 8$)

The zero-span method was used because all measured T data are > 6.25 microseconds and both RBW and VBW are $> 50/T$.

1. RBW = 8 MHz (the largest available value)
2. VBW = 8 MHz ($\geq$ RBW)
3. SPAN = 0 Hz
4. Detector = Peak
5. Number of points in sweep > 100
6. Trace mode = Clear write
7. Measure T_{total} and T_{on}
8. Calculate Duty Cycle = T_{on} / T_{total} and Duty Cycle Factor = $10 \cdot \log(1/\text{Duty Cycle})$

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

■ Duty Cycle Factor

Mode	T _{on} (ms)	T _{total} (ms)	Duty Cycle	Duty Cycle Factor(dB)
802.11n_20 MHz BW	-	-	-	-
802.11n_40 MHz BW	-	-	-	-

8.2 EMISSION BANDWIDTH AND MINIMUM EMISSION BANDWIDTH MEASUREMENT

The bandwidth at 26 dB down from the highest in-band spectral density is measured with a spectrum analyzer connected to the antenna terminal while the EUT is operating at its maximum power control level, as defined in KDB 789033 D02 v01r04, at the appropriate frequencies. The spectrum analyzer's bandwidth measurement function is configured to measure the 26 dB bandwidth.

The 26 dB bandwidth is used to determine the conducted power limits.

■ TEST CONFIGURATION

■ TEST PROCEDURE (26dB Bandwidth)

The transmitter output is connected to the Spectrum Analyzer.

The Spectrum Analyzer is set to(C.1 in KDB 789033 D02 v01r04)

1. RBW = approximately 1 % of the emission bandwidth
2. VBW > RBW
3. Detector = Peak
4. Trace mode = max hold
5. Measure the maximum width of the emission that is 26 dB down from the peak of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately 1 %.

Note : 1) We tested 26dB bandwidth using the automatic bandwidth measurement capability of a spectrum analyzer. X dB is set to 26dB.

2) In order to simplify the test report, attached plots were only for the widest channel.

3) DFS test channels should be defined. So we performed the OBW test to prove that no part of the fundamental emissions of any channels belong to UNII 1 and UNII 3 band for DFS.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

■ **TEST PROCEDURE (for the band 5.725 – 5.85 GHz, 6dB Bandwidth)**

The transmitter output is connected to the Spectrum Analyzer.

The Spectrum Analyzer is set to(C.1 in KDB 789033 D02 v01r04)

1. RBW = 100 kHz
2. VBW $\geq 3 \times$ RBW
3. Detector = Peak
4. Trace mode = max hold
5. Allow the trace to stabilize
6. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

Note : We tested 6dB bandwidth using the automatic bandwidth measurement capability of a spectrum analyzer. X dB is set to 6dB.

8.3 OUTPUT POWER MEASUREMENT

Test Requirements and limit, §15.407(a)(1)

A transmitter antenna terminal of EUT is connected to the input of a Spectrum Analyzer. Measurement is made while the EUT is operating in transmission mode at the appropriate frequencies. In the 5.15 – 5.25 GHz band, the maximum permissible conducted output power is the lesser of 250 mW ((23.98 dBm). In the 5.25 – 5.35 GHz band and 5.47 – 5.725 GHz band, the maximum permissible conducted output power is the lesser of 250 mW (23.98 dBm) or $11 \text{ dBm} + 10 \log_{10} (26 \text{ dB BW})$. In the 5.725 – 5.85 GHz band, the maximum permissible conducted output power is the lesser of 1 W ((30 dBm).

■ TEST CONFIGURATION(20 MHz BW)

■ TEST PROCEDURE(20 MHz BW)

- Average Power (Procedure E.3.a in KDB 789033 D02 v01r04)
 1. Measure the duty cycle.
 2. Measure the average power of the transmitter. This measurement is an average over both the on and off periods of the transmitter.
 3. Add $10 \log (1/x)$, where x is the duty cycle, to the measured power in order to compute the average power during the actual transmission times.

■ TEST CONFIGURATION(40 MHz BW)

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

■ TEST PROCEDURE(40 MHz BW)

▪ Average Power

The transmitter output is connected to the Spectrum Analyzer. We use the spectrum analyzer's integrated band power measurement function. We tested according to Method SA-2 in KDB 789033 D02 v01r04.

The Spectrum Analyzer is set to

1. Measure the duty cycle.
2. Set span to encompass the 26 dB EBW of the signal.
3. RBW = 1 MHz.
4. VBW $\geq$ 3 MHz.
5. Number of points in sweep $\geq$ 2*span/RBW.
6. Sweep time = auto.
7. Detector = RMS.
8. Do not use sweep triggering. Allow the sweep to "free run".
9. Trace average at least 100 traces in power averaging(RMS) mode
10. Integrated bandwidth = OBW
11. Add $10\log(1/x)$, where x is the duty cycle, to the measured power in order to compute the average power during the actual transmission times.

■ Sample Calculation

Output Power = Reading Value + ATT loss + Cable loss(1 ea) + Duty Cycle Factor

Output Power = 10 dBm + 20 dB + 0.8 dB + 0.21 dB = 31.01 dBm

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500

8.4 POWER SPECTRAL DENSITY

The peak power density is measured with a spectrum analyzer connected to the antenna terminal while the EUT is operating in transmission mode at the appropriate frequencies. The maximum permissible peak power spectral density is 11 dBm/ MHz in the 5.15 GHz – 5.25 GHz / 5.25 GHz – 5.35 GHz / 5.47 GHz – 5.725 GHz bands and 30 dBm/ 500 kHz in the 5.725 GHz – 5.85 GHz band.

■ TEST CONFIGURATION

■ TEST PROCEDURE

We tested according to Method in KDB 789033 D02 v01r04

The spectrum analyzer is set to :

1. Set span to encompass the entire emission bandwidth(EBW) of the signal.
2. RBW = 1 MHz.
3. VBW $\geq$ 3 MHz.
4. Number of points in sweep $\geq 2 \times \text{span} / \text{RBW}$.
5. Sweep time = auto.
6. Detector = RMS(i.e., power averaging), if available. Otherwise, use sample detector mode.
7. Do not use sweep triggering. Allow the sweep to “free run”.
8. Trace average at least 100 traces in power averaging(RMS) mode
9. Use the peak search function on the spectrum analyzer to find the peak of the spectrum.
10. If Method SA-2 was used, add $10 \log(1/x)$, where x is the duty cycle, to the peak of the spectrum.

■ Sample Calculation

PSD = Reading Value + ATT loss + Cable loss(1 ea) + Duty Cycle Factor

Output Power = -5 dBm + 10 dB + 0.8 dB + 0.21 dB = 16.01 dBm

8.5 FREQUENCY STABILITY.

The EUT was placed inside an environmental chamber as the temperature in the chamber was varied between -30 °C and 50 °C. The temperature was incremented by 10 °C intervals and the unit was allowed to stabilize at each temperature before each measurement. The center frequency of the transmitting channel was evaluated at each temperature and the frequency deviation from the channel's center frequency was recorded.

Batt. Endpoint	4.70	+20	5 180005.57	5.57

Note:

Based on the results of the frequency stability test shown above the frequency deviation results measured are very small. As such it is determined that the channels at the band edge would remain in-band when the maximum measured frequency error noted during the frequency stability tests is applied. Therefore the device is determined to remain operating in band over the temperature and voltage range as tested.

8.6 RADIATED MEASUREMENT.

8.6.1 RADIATED SPURIOUS EMISSIONS.

Test Requirements and limit, §15.205, §15.209, §15.407

Frequency (MHz)	Field Strength (uV/m)	Measurement Distance (m)
0.009 – 0.490	2400/F(kHz)	300
0.490 – 1.705	24000/F(kHz)	30
1.705 – 30	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

■ §15.407, KDB 789033 D02

All harmonics that do not lie in a restricted band are subject to a peak limit of -27 dBm/MHz. At a distance of 3 meters the field strength limit in dBμV/m can be determined by adding a “conversion” factor of 95.2 dB to the EIRP limit of -27 dBm/MHz to obtain the limit for out of band spurious emissions of 68.2 dBμV/m.

Especially, for transmitter operating in the 5725 MHz – 5850 MHz :

All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasingly linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

Test Configuration

Below 30 MHz

30 MHz - 1 GHz

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

Above 1 GHz

TEST PROCEDURE USED

ANSI C63.10 - 2013

Method H)5) in KDB 789033 D02 v01r04 (Peak)

Method H)6)d) in KDB 789033 D02 v01r04 (Average)

. Spectrum setting:

- Peak.

1. RBW = 1 MHz

2. VBW $\geq$ 3 MHz

3. Detector = Peak

4. Sweep Time = auto

5. Trace mode = max hold

6. Allow sweeps to continue until the trace stabilizes.

7. Note that if the transmission is not continuous, the time required for the trace to stabilize will increase by a factor of approximately $1/x$, where x is the duty cycle.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

- Average (Method VB :Averaging using reduced video bandwidth)

1. RBW = 1 MHz

2. VBW

2.1. If the EUT is configured to transmit with duty cycle ≥ 98 percent, set $VBW \leq RBW/100$ (i.e., 10 kHz) but not less than 10 Hz.

2.2. If the EUT duty cycle is < 98 percent, set $VBW \geq 1/T$, where T is the minimum transmission duration.

3. The analyzer is set to linear detector mode.

4. Detector = Peak.

5. Sweep time = auto.

6. Trace mode = max hold.

7. Allow max hold to run for at least 50 traces if the transmitted signal is continuous or has at least 98 percent duty cycle. For lower duty cycles, increase the minimum number of traces by a factor of $1/x$, where x is the duty cycle.

Note :

1. We used the Method VB for 802.11n_20/n_40 to perform the average filed strength measurements.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

TEST RESULTS

9 kHz – 30MHz

Operation Mode: Normal Mode

Test Conditions:

Frequency (MHz)	Meter dBμV/m	Corr. Factor	Corr. Reading	Spec	Margin	Detector Type	Table Azimuth	Antenna Height	Polarity	Test Distance
No Signals Detected Within 10 dB of Limits										

Notes:

1. Measuring frequencies from 9 kHz to the 30MHz.
2. The reading of emissions are attenuated more than 20 dB below the permissible limits or the field strength is too small to be measured.
3. Distance extrapolation factor = $40 \log (\text{specific distance} / \text{test distance})$ (dB)
4. Limit line = specific Limits (dBuV) + Distance extrapolation factor
5. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

TEST RESULTS

Below 1 GHz

Operation Mode: Normal Mode

Test Conditions:

Frequency (MHz)	Meter dB μ V/m	Corr. Factor	Corr. Reading	Spec	Margin	Detector Type	Table Azimuth	Antenna Height	Polarity	Test Distance
No Signals Detected Within 10 dB of Limits										

Notes:

1. Measuring frequencies from 30 MHz to the 1 GHz.
2. Radiated emissions measured in frequency range from 30 MHz to 1000 MHz were made with an instrument using Quasi peak detector mode.
3. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

1 GHz – 26.5 GHz

Notes:

1. Measuring frequencies from 1 GHz to the 10th harmonic of highest fundamental frequency.
 2. Measurements above show only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.
 3. Radiated emissions measured in frequency above 1000MHz were made with an instrument using Peak detector mode and average detector mode of the emission shown.
 4. Total = Reading Value + Antenna Factor + Cable Loss - Amp Gain
 5. We have done all data rate in 802.11n_40 MHz BW. Worst case is 13.5 Mbps in 802.11n_40 MHz BW.
 6. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
4. To simplify report, worst case data for each UNII Band is shown here.

8.6.2 RADIATED RESTRICTED BAND EDGE MEASUREMENTS

Test Requirements and limit, §15.247(d) §15.205, §15.209

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in section 15.209(a) (See section 15.205(c)).

8.7 POWERLINE CONDUCTED EMISSIONS

Test Requirements and limit, §15.207

For an intentional radiator which is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed 250 microvolts (The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz). The limits at specific frequency range is listed as follows:

Frequency Range (MHz)	Limits (dBμV)	
	Quasi-peak	Average
0.15 to 0.50	66 to 56	56 to 46
0.50 to 5	56	46
5 to 30	60	50

Compliance with this provision shall be based on the measurement of the radio frequency voltage between each power line (LINE and NEUTRAL) and ground at the power terminals.

FCC PT.15.407 TEST REPORT	FCC Part 15.407 WLAN(802.11n(20/40MHz)) – 5GHz Test Report		FCC ID : YM780-9500
Test Report No. 4325-3	Date of Issue: 11/27/2017	EUT : IP Camera	IC : 9637A-809500

Test Configuration

See test photographs attached in Appendix 1 for the actual connections between EUT and support equipment.

TEST PROCEDURE

1. The EUT is placed on a wooden table 80 cm above the reference groundplane.
2. The EUT is connected via LISN to a test power supply.
3. The measurement results are obtained as described below:
4. Detectors – Quasi Peak and Average Detector.
5. We are performed the AC Power Line Conducted Emission test for 6 Mbps, Ch.52 and 802.11a mode in UNII 2. Because 802.11a mode in UNII 2 is worst case.

9. LIST OF TEST EQUIPMENT

Manufacturer	Model / Equipment	Calibration Interval	Calibration Due	Serial No.
Omega	IBTHXBP / Temp & Humidity Meter	Annual	07/08/2018	14490199
Fluke	87 / DMM	Annual	07/28/2018	64920001
ETS	EmPower / Power Sensor	Annual	08/09/2018	141000-48SNO051
EMCO	3816-2 / LISN	Annual	08/12/2018	9809-1089
Rohde & Schwarz	FSV40 / Spectrum Analyzer	Annual	07/20/2018	101424
Sunol Sciences	JB6 / Bi-Conilog Antenna	Annual	07/08/2018	A042610
A.H. Systems	SAS- 571 / Horn Antenna	Annual	07/13/2018	236
