

FCC TEST REPORT

According to

FCC Part 15, Subpart C (15.231) / ANSI C63.4: 2003

Applicant	: SAN HSIN PLASTECH CO., LTD.
Address	: NO. 17 JIANGUO E.RD., Tao Yuan District, Tao Yuan City 330, Taiwan, R.O.C.
Equipment	: Brushless DC Tubular Motor for Motorized Blinds System
Model No.	: SSRC001, SSRC05E, SSRC16C
FCC ID.	: YUYSSRC001
Trade Name	: SAN HSIN

- The test result refers exclusively to the test presented test model / sample.,
- Without written approval of **Cerpass Technology Corp.**, the test report shall not be reproduced except in full.

CERTIFICATE OF COMPLIANCE

According to

FCC Part 15, Subpart C (15.231) / ANSI C63.4: 2003

Applicant	: SAN HSIN PLASTECH CO., LTD.
Address	: NO. 17 JIANGUO E.RD., Tao Yuan District, Tao Yuan City 330, Taiwan, R.O.C.
Equipment	: Brushless DC Tubular Motor for Motorized Blinds System
Model No.	: SSRC001, SSRC05E, SSRC16C
FCC ID.	: YUYSSRC001

I HEREBY CERTIFY THAT :

The measurements shown in this test report were made in accordance with the procedures given in **ANSI C63.4**. The equipment was **passed** the test performed according to **FCC Part 15, Subpart C (15.231) / ANSI C63.4: 2003**.

The sample was received on Jan. 30, 2015 and the testing was carried out on Jan. 30, 2015 at CerpPASS Technology Corp.

1. Report of Measurements and Examinations

1.1 List of Measurements and Examinations

FCC Rule	Test Type	Result
15.203	Antenna Requirement	Pass
15.207	Conducted Emission	Not Applicable
15.209 15.231	Radiated Emission	Pass
15.231	20dB Occupied Bandwidth Measurement	Pass

Note: the information of measurement uncertainty is available upon the customer's request.

2. Test Configuration of Equipment under Test

2.1 Feature of Equipment under Test

1 to 5 channels, LED type

Model Number	SSRC05E
Power Supply	CR-2430, 3Vdc Lithium Battery, 1PCS
Operating Frequency	433.92MHz
Output Power	100uW (Peak)
Channel of Multi-Window Control	5 channels
Modulation Type	ASK
Antenna Type	PCB Antenna

1 to 16 channels, LCD type

Model Number	SSRC001, SSRC16C
Power Supply	CR-2430, 3Vdc Lithium Battery, 1PCS
Operating Frequency	433.92MHz
Output Power	100uW (Peak)
Channel of Multi-Window Control	16 channels
Modulation Type	ASK
Antenna Type	PCB Antenna

2.2 Difference of model numbers

Model No.	SSRC001	SSRC05E	SSRC16C
Operating Frequency	433.92MHz		
Modulation Type	ASK		
Channel of Multi-Window Control	16CH	5CH	16CH
Display	LCD Display Panel	LED Lght	LCD Display Panel
Operating function keys	10keys Up, Stop, Down, Left, Rignt, Front, Rear, ENT, SET, Copy	6keys Up, Stop, Down 、 MODE 、 SET 、 COPY	10keys Up, Stop, Down, Left, Rignt, Front, Rear 、 ENT 、 SET 、 COPY

2.3 Test Mode and Test Software

- a. During testing, the interface cables and equipment positions were varied according to ANSI C63.4.
- b. The complete test system included EUT for the test.
- c. XYZ 3 axis of the EUT have been tested, only the worst axis was reported.
- d. New battery was used for all the testing on this report.

2.4 Description of Test System

The EUT was tested alone. No support devices are needed for testing.

2.5 General Information of Test

Test Site :	CerpPASS Technology Corporation Test Laboratory No.10, Lane 2, Lianfu Street, Luzhu Township, Taoyuan County 33848, Taiwan(R.O.C.)
Test Site Location :	No.68-1, Shihbachongsi, Shihding Township, New Taipei City 223, Taiwan, R.O.C.
FCC Registration Number :	☐ TW1079, ☒ TW1061, ☐ 390316, ☒ 228391, ☐ 641184
IC Registration Number :	☐ 4934B-1, ☒ 4934E-1, ☐ 4934E-2
VCCI Registration Number :	☒ T-2205 for Telecommunication Test ☒ C-4463 for Conducted emission test ☒ R-3428 for Radiated emission test ☒ G-812 for radiated disturbance above 1GHz ☐ G-813 for radiated disturbance above 1GHz
Test Condition:	Normal Voltage : 3 V Extreme Voltage : 2.7 V and 3.3 V Normal Temperature : 25℃ Extreme Temperature : 0℃ and 40℃

2.6 Measurement Uncertainty

Measurement Item	Measurement Frequency	Polarization	Uncertainty
Conducted Emission	9 kHz ~ 30 MHz	LINE/NEUTRAL	3.25 dB
Radiated Emission	30 MHz ~ 1,000 MHz	Vertical / Horizontal	3.93 dB
	1,000 MHz ~ 18,000 MHz	Vertical / Horizontal	5.18 dB

3. Antenna Requirements

3.1 Standard Applicable

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247(b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

3.2 Antenna Construction and Directional Gain

Antenna Type: PCB Antenna

4. Test of Conducted Emission

4.1 Test Limit

Conducted Emissions were measured from 150 kHz to 30 MHz with a bandwidth of 9 KHz on the 120 VAC power and return leads of the EUT according to the methods defined in ANSI C63.4-2009 Section 3.1. The EUT was placed on a nonmetallic stand in a shielded room 0.8 meters above the ground plane as shown in section 2.2. The interface cables and equipment positioning were varied within limits of reasonable applications to determine the position produced maximum conducted emissions.

Frequency (MHz)	Quasi Peak (dB μ V)	Average (dB μ V)
0.15 – 0.5	66-56*	56-46*
0.5 – 5.0	56	46
5.0 – 30.0	60	50

*Decreases with the logarithm of the frequency.

4.2 Test Procedures

- The EUT was placed 0.4 meter from the conducting wall of the shielding room was kept at least 80 centimeters from any other grounded conducting surface.
- Connect EUT to the power mains through a line impedance stabilization network (LISN).
- All the support units are connecting to the other LISN.
- The LISN provides 50 ohm coupling impedance for the measuring instrument.
- The FCC states that a 50 ohm, 50 micro-Henry LISN should be used.
- Both sides of AC line were checked for maximum conducted interference.
- The frequency range from 150 kHz to 30 MHz was searched.
- Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

4.3 Typical Test Setup

4.4 Test Result and Data

The test item is not applicable because the EUT is powered from DC.

5. Test of Radiated Emission

5.1 Test Limit

According to 15.231(e) the field strength of emissions from intentional radiators operated under these frequencies bands shall not exceed the following:

Frequency (MHz)	Field Strength of Fundamental		Field Strength of Spurious	
	$\mu\text{V}/\text{m}$	$\text{dB}\mu\text{V}/\text{m}$	$\mu\text{V}/\text{m}$	$\text{dB}\mu\text{V}/\text{m}$
40.66 ~ 40.70	1000	60	100	40
70 ~ 130	500	54	50	34
130 ~ 174	500 ~ 1500	54 ~ 63.5	50 ~ 150	34 ~ 43.5
174 ~ 260	1500	63.5	150	43.5
260 ~ 470	1500 ~ 5000	63.5 ~ 74	150 ~ 500	43.5 ~ 54
Above 470	5000	74	500	54

NOTE:

1. Where F is the frequency in MHz, the formula for calculating the maximum permitted fundamental field strengths are as follows: for the band 130-174 MHz, $\mu\text{V}/\text{m}$ at 3 meters = $22.72727(F)-2454.545$; for the band 260-470 MHz, $\mu\text{V}/\text{m}$ at 3 meters = $16.6667(F)-2833.3333$. The maximum permitted unwanted emission level is 20 dB below the maximum permitted fundamental level.
2. The above field strength limits are specified at a distance of 3meters. The tighter limits apply at the band edges.

Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

Frequency (MHz)	Distance	Limit ($\mu\text{V}/\text{m}$)
0.09 ~ 0.490	300m	$2400/F(\text{kHz})$
0.490 ~ 1.705	30m	$24000/ F(\text{kHz})$
1.705 ~ 30	30m	30
30 ~ 88	3m	100
88 ~ 216	3m	150
216 ~ 960	3m	200
Above 960	3m	500

As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

5.2 Test Procedures

- a. The EUT was placed on a rotatable table top 0.8 meter above ground.
- b. The EUT was set 3 meters from the interference receiving antenna which was mounted on the top of a variable height antenna tower.
- c. The table was rotated 360 degrees to determine the position of the highest radiation.
- d. The antenna is a broadband antenna and its height is varied between one meter and four meters above ground to find the maximum value of the field strength both horizontal polarization and vertical polarization of the antenna are set to make the measurement.
- e. For each suspected emission the EUT was arranged to its worst case and then tune the antenna tower (from 1 M to 4 M) and turn table (from 0 degree to 360 degrees) to find the maximum reading.
- f. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function and specified bandwidth with Maximum Hold Mode.
- g. If the emission level of the EUT in peak mode was 3 dB lower than the limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method and reported.
- h. For testing above 1GHz, the emission level of the EUT in peak mode was 20dB lower than average limit (that means the emission level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.
- i. "Cone of radiation" has been considered to be 3dB beamwidth of the measurement antenna.

NOTE:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Peak detection (PK) and Quasi-peak detection (QP) at frequency below 1GHz.
2. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 1 MHz for Peak detection at frequency above 1GHz.
3. The Average value = Peak value + 20log(Duty cycle)
4. Duty Factor = $20\log(\text{total duty} / \text{period of pulse train})$
 $= 20\log \{[(85.2\text{ms}+9.6\text{ms}) \times 1] / 100\}$
 $= -0.46$

Test Date: Dec. 30, 2014

Temperature: 26°C

Atmospheric pressure: 1008 hPa

Humidity: 50%

Period of Pulse Train

6. 20dB Occupied Bandwidth Measurement

6.1 Test Procedure

- The EUT placed on the turning table.
- The signal was coupled to the spectrum analyzer through an antenna.
- Set the resolution bandwidth to 100kHz and video bandwidth to 100kHz then select Peak function to scan the channel frequency.
- The 20dB bandwidth was measured and recorded.

6.2 Test Setup Layout

6.3 Limits of Band Edges Measurement

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for device operating above 70 MHz and above 900 MHz.
