## GENERAL INFORMATION

---

### Product Description for Equipment under Test (EUT)

The Zaidtek Electronic Technology (Xiamen) Co., Ltd.'s product, model number: HM8130 (FCC ID: YVYHM8130) (the "EUT") in this report was a 2.4GHz wireless optical mouse, was measured approximately: 9.9 cm (L) x 6 cm (W) x 3.9 cm(H), rated input voltage: DC3V from battery.

*Note: the series product, model HM8130, CRC#7949489 are electrically identical, the differences between them are model name, we selected HM8130 for fully testing, the details were explained in the attached declaration letter.*

*\* All measurement and test data in this report was gathered from production sample serial number: 160624053 (Assigned by BACL.Dongguan). The EUT was received on 2016-06-27.*

### Objective

This type approval report is prepared on behalf of Zaidtek Electronic Technology (Xiamen) Co., Ltd. in accordance with Part 2-Subpart J, and Part 15-Subparts A, B and C of the Federal Communication Commissions rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart C, and section 15.203, 15.205, 15.209 and 15.249 rules.

### Related Submittal(s)/Grant(s)

N/A

### Test Methodology

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

All emissions measurement was performed and Bay Area Compliance Laboratories Corp. (Dongguan).

### Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Dongguan) to collect test data is located on the No.69 Pulongcun, Puxinhu Industrial Zone, Tangxia, Dongguan, Guangdong, China

Test site at Bay Area Compliance Laboratories Corp. (Dongguan) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on February 06, 2015.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 273710. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

## SYSTEM TEST CONFIGURATION

### Justification

The system was configured for testing in engineering mode with maximum power output and switched the channels by key.

Channels list as follows:

| Channel Number | Frequency (MHz) | Channel Number | Frequency (MHz) |
|----------------|-----------------|----------------|-----------------|
| 1              | 2405            | 5              | 2440            |
| 2              | 2413            | 6              | 2450            |
| 3              | 2422            | 7              | 2460            |
| 4              | 2430            | 8              | 2470            |

Channel 1, 4, 8 were selected to test.

### EUT Exercise Software

No software was used in test.

### Equipment Modifications

No modifications were made to the EUT.

### Block Diagram of Test Setup

**SUMMARY OF TEST RESULTS**

| FCC Rules                | Description of Test  | Result         |
|--------------------------|----------------------|----------------|
| §15.203                  | Antenna Requirement  | Compliance     |
| §15.207(a)               | Conduction Emissions | Not Applicable |
| 15.205, §15.209, §15.249 | Radiated Emissions   | Compliance     |
| §15.215 (c)              | 20 dB Bandwidth      | Compliance     |

---

## **FCC§15.203 - ANTENNA REQUIREMENT**

---

### **Applicable Standard**

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used.

### **Antenna Connector Construction**

The EUT has one integral antenna arrangement, which was permanently attached and the antenna gain is -1.0 dBi, fulfill the requirement of this section. Please refer to the EUT photos.

**Result:** Compliant.

## **FCC§15.205, §15.209&§15.249- RADIATED EMISSIONS**

### **Applicable Standard**

As per FCC§15.249 (a), except as provided in paragraph (b) of this section, the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

| <b>Fundamental frequency</b> | <b>Field strength of fundamental (millivolts/meter)</b> | <b>Field strength of harmonics (microvolts/meter)</b> |
|------------------------------|---------------------------------------------------------|-------------------------------------------------------|
| 902–928 MHz                  | 50                                                      | 500                                                   |
| 2400–2483.5 MHz              | 50                                                      | 500                                                   |
| 5725–5875 MHz                | 50                                                      | 500                                                   |
| 24.0–24.25 GHz               | 250                                                     | 2500                                                  |

As per FCC§15.249 (c), Field strength limits are specified at a distance of 3 meters.

(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

### **Measurement Uncertainty**

Compliance or non- compliance with a disturbance limit shall be determined in the following manner:

If  $U_{lab}$  is less than or equal to  $U_{cisprr}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non - compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

If  $U_{lab}$  is greater than  $U_{cisprr}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level, increased by  $(U_{lab} - U_{cisprr})$ , exceeds the disturbance limit;
- non - compliance is deemed to occur if any measured disturbance level, increased by  $(U_{lab} - U_{cisprr})$ , exceeds the disturbance limit.

Based on CISPR 16-4-2: 2011, measurement uncertainty of radiated emission at a distance of 3m at Bay Area Compliance Laboratories Corp. (Dongguan) is: 30M~200MHz: 4.58 dB for Horizontal, 4.59 dB for Vertical; 200M~1GHz: 4.83 dB for Horizontal, 5.85 dB for Vertical; 1G~6GHz: 4.45 dB, 6G~18GHz: 5.23 dB

Table 1 – Values of  $U_{\text{cispr}}$ 

| Measurement                                                                                | $U_{\text{cispr}}$ |
|--------------------------------------------------------------------------------------------|--------------------|
| Radiated disturbance (electric field strength at an OATS or in a SAC) (30 MHz to 1000 MHz) | 6.3 dB             |
| Radiated disturbance (electric field strength in a FAR) (1 GHz to 6 GHz)                   | 5.2 dB             |
| Radiated disturbance (electric field strength in a FAR) (6 GHz to 18 GHz)                  | 5.5 dB             |

## EUT Setup

Below 1 GHz:

Above 1 GHz:

The radiated emission and out of band emission tests were performed in the 3 meters chamber test site, using the setup accordance with the ANSI C63.10-2013 The specification used was the FCC 15.209/15.205 and FCC 15.249 limits.

## Test Equipment Setup

The system was investigated from 30 MHz to 25 GHz.

During the radiated emission test, the EMI test receiver & Spectrum Analyzer Setup were set with the following configurations:

| Frequency Range   | RBW     | Video B/W | IF B/W  | Detector |
|-------------------|---------|-----------|---------|----------|
| 30 MHz – 1000 MHz | 120 kHz | 300 kHz   | 120 kHz | QP       |
| Above 1 GHz       | 1MHz    | 3 MHz     | /       | PK       |
|                   | 1MHz    | 10 Hz     | /       | Ave.     |

## Test Procedure

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All data was recorded in the Quasi-peak detection mode from 30 MHz to 1GHz, peak and average detection mode above 1 GHz.

## Corrected Amplitude & Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

$$\text{Corrected Amplitude} = \text{Meter Reading} + \text{Antenna Factor} + \text{Cable Loss} - \text{Amplifier Gain}$$

The “**Margin**” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Limit} - \text{Corrected Amplitude}$$

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

**Test Results Summary**

According to the data in the following table, the EUT complied with the FCC Part 15.209 & 15.205 & 15.249, with the worst margin reading of:

**4.31 dB at 2400 MHz in the Horizontal polarization**

**Test Data****Environmental Conditions**

|                           |           |
|---------------------------|-----------|
| <b>Temperature:</b>       | 26.8 °C   |
| <b>Relative Humidity:</b> | 49%       |
| <b>ATM Pressure:</b>      | 100.3 kPa |

*The testing was performed by Lion Xiao on 2016-07-01.*

Test Mode: Transmitting

30MHz-1GHz:

**FCC §15.215(c) – 20 dB BANDWIDTH TESTING****Applicable Standard**

Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.

**Test Procedure**

1. Measure the frequency difference of two frequencies that were attenuated 20 dB from the reference level. Record the frequency difference as the emission bandwidth.
2. Repeat above procedures until all frequencies measured were complete.

**Test Equipment List and Details**

| Manufacturer | Description       | Model      | Serial Number | Calibration Date | Calibration Due Date |
|--------------|-------------------|------------|---------------|------------------|----------------------|
| R&S          | Spectrum Analyzer | FSEM       | 831259/019    | 2015-07-28       | 2016-07-27           |
| ETS-Lindgren | Horn Antenna      | 3115       | 9808-5557     | 2015-09-06       | 2018-09-06           |
| Mini-Circuit | Amplifier         | ZVA-213-S+ | 054201245     | 2016-02-19       | 2017-02-19           |
| N/A          | Coaxial Cable     | 14m        | N/A           | 2016-05-06       | 2017-05-06           |
| N/A          | Coaxial Cable     | 8m         | N/A           | 2016-05-06       | 2017-05-06           |

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

**Test Data****Environmental Conditions**

|                    |           |
|--------------------|-----------|
| Temperature:       | 26.8°C    |
| Relative Humidity: | 49 %      |
| ATM Pressure:      | 100.3 kPa |

\* The testing was performed by Lion Xiao on 2016-07-01.

**Test Result:** Compliant.

Please refer to following tables and plots

Test Mode: Transmitting

| Channel | Frequency (MHz) | 20 dB Bandwidth (MHz) |
|---------|-----------------|-----------------------|
| Low     | 2405            | 2.56                  |
| Middle  | 2430            | 2.35                  |
| High    | 2470            | 2.21                  |

## Low Channel

Date: 1.JUL.2016 12:54:41

### Middle Channel

Date: 1.JUL.2016 13:03:09

### High Channel

Date: 1.JUL.2016 12:59:00
