

Certification Test Report

FCC ID: YWZ-S3I-0007
IC: 3356F-S3I0007

FCC Rule Part: 15.247
IC Radio Standards Specification: RSS-210

ACS Report Number: 15-2025.W06.1A

Applicant: Alpha High Theft Solutions,
A Division of Checkpoint Systems, Inc.

Model(s): S3I-0007

Test Begin Date: **April 15, 2015**
Test End Date: **April 22, 2015**

Report Issue Date: May 6, 2015

FOR THE SCOPE OF ACCREDITATION UNDER CERTIFICATE NUMBER AT-1533

This report must not be used by the client to claim product certification, approval, or endorsement by ANAB, ANSI, or any agency of the Federal Government.

1 GENERAL

1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart C of the FCC's Code of Federal Regulations and Industry Canada's Radio Standards Specification RSS-210.

1.2 Applicant Information

Alpha - High Theft Solutions
10715 Sikes Place, Ste 200
Charlotte, NC 28277

1.3 Product Description

The S3I-0007 S3I-SHELFNET-SENSOR is a simple RF remote sensor that includes three different switches for communicating states to the S3i System. The product is placed on retail forward facing mechanisms and provides out of stock notification to in store S3I network.

Technical Details

Mode of Operation:	IEEE 802.15.4
Frequency Range:	2405 MHz - 2480 MHz
Number of Channels:	16
Channel Separation:	5 MHz
Modulations:	O-QPSK
Antenna Type/Gain:	Printed Circuit board wiggle / 2.15 dBi
Input Power:	3 VDC (CR2450 Battery)

Model Number: S3I-0007

Test Sample Serial Number(s): ACS#1 (Radiated Emissions), 14370199 (RF Conducted Measurements)

Test Sample Condition: The equipment was provided in good condition without any physical damage.

1.4 Test Methodology and Considerations

The EUT was evaluated for RF conducted and radiated emission measurements.

For radiated emissions, including band edge, three orientations of the EUT were evaluated to determine worst case. The worst case orientation was determined to be the EUT flat on the tabletop.

For the purpose of RF conducted measurements, the EUT was modified with a temporary 50 ohm antenna port.

The EUT was also evaluated for unintentional emissions. The results are documented separately in a verification test report.

2 TEST FACILITIES

2.1 Location

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions, Inc.
3998 FAU Blvd, Suite 310
Boca Raton, Florida 33431
Phone: (561) 961-5585
Fax: (561) 961-5587
www.acstestlab.com

FCC Test Firm Registration #: 475089
Industry Canada Lab Code: 4175C

2.2 Laboratory Accreditations/Recognitions/Certifications

ACS is accredited to ISO/IEC 17025 by ANSI-ASQ National Accreditation Board under their ANAB program and has been issued certificate number AT-1533 in recognition of this accreditation. Unless otherwise specified, all test methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

2.3 Radiated & Conducted Emissions Test Site Description

2.3.1 Semi-Anechoic Chamber Test Site

The EMC radiated test facility consists of an RF-shielded enclosure. The interior dimensions of the indoor semi-anechoic chamber are approximately 48 feet (14.6 m) long by 36 feet (10.8 m) wide by 24 feet (7.3 m) high and consist of rigid, 1/8 inch (0.32 cm) steel-clad, wood core modular panels with steel framing. In the shielded enclosure, the faces of the panels are galvanized and the chamber is self-supporting. 8-foot RF absorbing cones are installed on 4 walls and the ceiling. The steel-clad ground plane is covered with vinyl floor.

The turntable is driven by pneumatic motor, which is capable of supporting a 2000 lb. load. The turntable is flushed with the chamber floor which it is connected to, around its circumference, with a continuous metallic loaded spring. An EMCO Model 1050 Multi-device Controller controls the turntable position.

A pneumatic motor is used to control antenna polarizations and height relative to the ground. The height information is displayed on the control unit EMCO Model 1050.

The control room is an RF shielded enclosure attached to the semi-anechoic chamber with two bulkhead panels for connecting RF, and control cables. The dimension of the room is 7.3 m x 4.9 m x 3 m high and the entrance doors of both control and conducted rooms are 3 feet (0.91 m) by 7 feet (2.13 m).

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3.1-1 below:

Figure 2.3.1-1: Semi-Anechoic Chamber Test Site

2.3.2 Conducted Emissions Test Site Description

The dimensions of the shielded conducted room are $7.3 \times 4.9 \times 3 \text{ m}^3$. As per ANSI C63.4 2009 requirements, the data were taken using two LISNs; a Solar Model 8028-50 $50 \Omega/50 \mu\text{H}$ and an EMCO Model 3825, which are installed as shown in Photograph 3. For evaluations requiring 220 V, 50 Hz, a Polarad LISN (S/N 879341/048) is used in conjunction with a 1 kVA, 50 Hz/220 V EDGAR variable frequency generator, Model 1001B, to filter conducted noise from the generator.

A diagram of the room is shown below in figure 2.3.2-1:

Figure 2.3.2-1: AC Mains Conducted EMI Site

7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

7.1 Antenna Requirement – FCC: Section 15.203

The EUT uses a printed circuit board wiggle antenna which is integral to the radio PCB. The antenna cannot be removed without damaging the unit. The EUT meets the requirements of FCC 15.203.

7.2 6 dB Bandwidth - FCC: Section 15.247(a)(2) 99% Bandwidth IC: RSS-210 A8.2(a)

7.2.1 Measurement Procedure

The 6dB bandwidth was measured in accordance with the FCC KDB Publication No. 558074 “Guidance for Performing Compliance Measurements on Digital Transmission Systems (47 CFR 15.247)” DTS Bandwidth Option 1. The RBW of the spectrum analyzer was set to 100 kHz and VBW 300 kHz. Span was set large enough to capture the emissions and >> RBW.

The 99% occupied bandwidth was measured with the spectrum analyzer span set to fully display the emission. The RBW was set to 1% to 5% of the approximated bandwidth. . The occupied 99% bandwidth was measured using the automated OBW measurement function of the SA.

7.2.2 Measurement Results

Results are shown below.

Table 7.2.2-1: 6dB / 99% Bandwidth

7.3 Peak Output Power - FCC Section 15.247(b)(3) IC: RSS-210 A8.4(4)

7.3.1 Measurement Procedure (Conducted Method)

The Peak Output Power was measured in accordance with the FCC KDB Publication No. 558074 "Guidance for Performing Compliance Measurements on Digital Transmission Systems (47 CFR 15.247)" Section 9.1.1 RBW $\geq$ DTS bandwidth. The RF output of the equipment under test was directly connected to the input of the spectrum analyzer through suitable attenuation.

7.3.2 Measurement Results

Results are shown below.

7.4 Band-Edge Compliance and Spurious Emissions-FCC 15.247(d) IC: RSS-210 A8.5

7.4.1 Band-Edge Compliance of RF Conducted Emissions

7.4.1.1 Measurement Procedure

The RF output port of the EUT was directly connected to the input of the spectrum analyzer via suitable attenuation. The EUT was investigated at the lowest and highest channel available to determine band-edge compliance. For each measurement the spectrum analyzer's RBW was set to 100 kHz, and the VBW was set to 300 kHz.

7.4.3 Radiated Spurious Emissions into Restricted Frequency Bands - FCC 15.205, 15.209; IC: RSS-210 2.2, RSS-Gen 8.9, 8.10

7.4.3.1 Measurement Procedure

Radiated emissions tests were made over the frequency range of 9 kHz to 26 GHz, 10 times the highest fundamental frequency. Each emission found to be in a restricted band as defined by section 15.205, including any emission at the operational band-edge, was compared to the radiated emission limits as defined in section 15.209.

For measurements below 30 MHz, the receive antenna height was set to 1m and the EUT was rotated through 360 degrees. The resolution bandwidth was set to 200 Hz below 150 kHz and to 9 kHz above 150 kHz.

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. For frequencies below 1000MHz, quasi-peak measurements were made using a resolution bandwidth RBW of 120 kHz and a video bandwidth VBW of 300 kHz. For frequencies above 1000 MHz, peak measurements are made with RBW of 1 MHz and VBW of 3 MHz. Average measurements are performed in the linear scale using VBW of 30 Hz over a 5 second sweep.

A duty cycle correction factor of 15.4% was used for the average measurements. The justification for the duty cycle correction factor is provided in the theory of operation of the equipment.

7.4.3.2 Measurement Results

Radiated band-edge and spurious emissions found in the restricted frequency bands of 9 kHz to 26 GHz are reported in the tables below.

Table 7.4.3.2-1: Radiated Spurious Emissions Tabulated Data

Frequency (MHz)	Level (dBuV)		Antenna Polarity (H/V)	Correction Factors (dB)	Corrected Level (dBuV/m)		Limit (dBuV/m)		Margin (dB)	
	pk	Qpk/Avg			pk	Qpk/Avg	pk	Qpk/Avg	pk	Qpk/Avg
Low Channel (2405 MHz)										
2390	60.51	48.45	H	-8.10	52.41	24.10	74.0	54.0	21.6	29.9
4810	59.24	52.34	H	0.38	59.62	36.47	74.0	54.0	14.4	17.5
4810	55.86	48.31	V	0.38	56.24	32.44	74.0	54.0	17.8	21.6
12025	45.65	32.68	H	13.72	59.37	30.15	83.5	63.5	24.1	33.3
Middle Channel (2440 MHz)										
4880	57.62	50.59	H	0.60	58.22	34.94	74.0	54.0	15.8	19.1
4880	54.80	46.68	V	0.60	55.40	31.03	74.0	54.0	18.6	23.0
7320	53.04	43.72	H	5.32	58.36	32.79	74.0	54.0	15.6	21.2
7320	48.55	36.15	V	5.32	53.87	25.22	74.0	54.0	20.1	28.8
High Channel (2480 MHz)										
2483.5	72.60	64.19	H	-7.72	64.88	40.22	74.0	54.0	9.1	13.8
2483.5	63.49	53.32	V	-7.72	55.77	29.35	74.0	54.0	18.2	24.6
4960	58.02	50.99	H	0.85	58.87	35.59	74.0	54.0	15.1	18.4
4960	54.86	47.04	V	0.85	55.71	31.64	74.0	54.0	18.3	22.4
7440	54.35	45.55	H	5.74	60.09	35.04	74.0	54.0	13.9	19.0
7440	48.16	36.65	V	5.74	53.90	26.14	74.0	54.0	20.1	27.9

Notes:

- The average measurement results were further corrected using a duty cycle correction factor of $20 \cdot \log(15.4/100) = 16.25$ dB as described in the equipment operational description document.
- The emissions above 10 GHz were evaluated at a test distance of 1m. The limits were corrected accordingly using a test distance of $20 \cdot \log(3/1) = 9.5$ dB
- All emissions above 12.03 GHz were attenuated below the limits and the noise floor of the measurement equipment.

7.4.3.3 Sample Calculation:

$$R_C = R_U + CF_T$$

Where:

CF_T	=	Total Correction Factor (AF+CA+AG)-DC (Average Measurements Only)
R_U	=	Uncorrected Reading
R_C	=	Corrected Level
AF	=	Antenna Factor
CA	=	Cable Attenuation
AG	=	Amplifier Gain
DC	=	Duty Cycle Correction Factor

$$\text{Duty Cycle Correction Factor} = 20 \cdot \log(15.4/100) = -16.25 \text{ dB}$$

Example Calculation: Peak

$$\text{Corrected Level: } 60.51 + (-8.1) = 52.41 \text{ dB}\mu\text{V/m}$$

$$\text{Margin: } 74 \text{ dB}\mu\text{V/m} - 52.41 \text{ dB}\mu\text{V/m} = 21.6 \text{ dB}$$

Example Calculation: Average

$$\text{Corrected Level: } 48.45 + (-8.1) - 16.25 \text{ dB} = 24.1 \text{ dB}\mu\text{V/m}$$

$$\text{Margin: } 54 \text{ dB}\mu\text{V/m} - 24.1 \text{ dB}\mu\text{V/m} = 29.9 \text{ dB}$$

7.5 Power Spectral Density - FCC Section 15.247(e) IC: RSS-210 A8.2(b)

7.5.1 PSD Measurement Procedure (Conducted Method)

The power spectral density was measured in accordance with the FCC KDB Publication No. 558074 "Guidance for Performing Compliance Measurements on Digital Transmission Systems (47 CFR 15.247)" Section 10.2 Method PKPSD (peak PSD). The RF output port of the EUT was directly connected to the input of the spectrum analyzer. Offset values were input for cable and external attenuation. The spectrum analyzer RBW was set to 3 kHz and VBW 10 kHz. Span was adjusted to 1.5 times the 6 dB bandwidth and the sweep time was set to auto.

7.5.2 Measurement Results

Results are shown below.

Table 7.5.2-1: Power Spectral Density

Frequency (MHz)	PSD (dBm)	Limit (dBm)	Margin (dB)
2405	-12.01	8.0	20.01
2440	-11.81	8.0	19.81
2480	-11.98	8.0	19.98

8 CONCLUSION

In the opinion of ACS, Inc., the model S3I-0007 manufactured by Alpha High Theft Solutions, A Division of Checkpoint Systems, Inc. meets the requirements of FCC Part 15 subpart C and Industry Canada's Radio Standards Specification RSS-210 for the test procedures documented in the test report.

END REPORT
