EXECUTIVE SUMMARY / ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on the test pages A sample of this product was tested to demonstrate limited compliance with FCC 47 CFR Part 80 (2024), FCC 47 CFR Part 2 (2023), ISED RSS-182 Issue 6 (2021-06) and ISED RSS-GEN Issue 5 (04-2018) + A2 (02-2021) for the tests detailed in section 1.3. The sample tested was found to comply with the requirements defined in the applied rules.

1.2 Introduction

Applicant	SRT Marine Technology Limited
Manufacturer	SRT Marine Technology Limited
Model Number(s)	X-100
Serial Number(s)	230587 and 4310002011730002
Hardware Version(s)	1.0
Software Version(s)	220200.01.00.00/20400.01.00.00
Number of Samples Tested	2
Test Specification/Issue/Date	FCC 47 CFR Part 80 (2024), FCC 47 CFR Part 2 (2023), ISED RSS-182 Issue 6 (2021-06) and ISED RSS-GEN Issue 5 (04-2018) + A2 (02-2021)
Order Number	POR102834
Date	09-June-2022
Date of Receipt of EUT	14-April-2023
Start of Test	14-April-2025
Finish of Test	28-May-2025
Name of Engineer(s)	Roscoe Harrison and Joshua Peploe-Williams
Related Document(s)	ANSI C63.26 (2015) KDB 971168

1.3 Brief Summary of Results

A brief summary of the tests carried out in accordance with FCC 47 CFR Part 80, FCC 47 CFR Part 2 and ISED RSS-182 and ISED RSS-GEN is shown below.

Section	Specification Clause				Test Description	Result	Comments/Base Standard
	Part 80	Part 2	RSS 182	RSS GEN			
Configuration and Mode: VHF - Voice Config Mode							
2.1	80.205,	2.1049	5.2	6.7	Bandwidths	Pass	ANSI C63.26 (2015)
2.2	80.209,	2.1055	5.5	6.11	Transmitter Frequency Tolerances	Pass	
2.3	80.211,	2.1051	5.9	6.13	Spurious Emissions at Antenna Terminals	Pass	ANSI C63.26 (2015)
2.4	80.211,	2.1051	5.9	6.13	Radiated Spurious Emissions	Pass	ANSI C63.26 (2015)
2.5	80.213,	2.1047	5.4	N/A	Modulation Requirements	Pass	
2.6	80.215,	2.1046	5.6	6.12	Transmitter Power	Pass	ANSI C63.26 (2015)
2.7	80.217(b)	N/A	N/A	N/A	Suppression of Interference Aboard Ships	Pass

DC Power Source

Nominal voltage:	12	V
Extreme upper voltage:	31.2	V
Extreme lower voltage:	9.6	V
Max current:	6	A

Battery Power Source

Voltage:		V
End-point voltage:		V (Point at which the battery will terminate)
Alkaline ☐ Leclanche ☐ Lithium ☐ Nickel Cadmium ☐ Lead Acid* ☐ *(Vehicle regulated)		
Other ☐	Please detail:	

Charging

Can the EUT transmit whilst being charged	Yes ☐ No ☐
---	--

Temperature

Minimum temperature:	-25	°C
Maximum temperature:	55	°C

Cable Loss

Adapter Cable Loss (Conducted sample)		dB
--	--	----

Antenna Characteristics

Antenna connector ☒			State impedance	50	Ohm
Temporary antenna connector ☐			State impedance		Ohm
Integral antenna ☐	Type:		Gain		dBi
External antenna ☒	Type:	VHF Vertical Omni	Gain	3	dBi

For external antenna only:
 Standard Antenna Jack ☒ If yes, describe how user is prohibited from changing antenna (if not professional installed): It is specified in the User Instructions to only fit a 3dBi antenna.
 Equipment is only ever professionally installed ☐
 Non-standard Antenna Jack ☐
 All part 15 applications will need to show how the antenna gain was derived either from a manufacturer data sheet or a measurement. Where the gain of the antenna is inherently accounted for as a result of the measurement, such as field strength measurements on a part 15.249 or 15.231 device, so the gain does not necessarily need to be verified. However, enough information regarding the construction of the antenna shall be provided. Such information maybe photographs, length of wire antenna etc.

Ancillaries (if applicable)

1.5 Product Information

1.5.1 Technical Description

X-100 VHF Radio with Class D DSC and AIS Class B SOTDMA

1.6 Deviations from the Standard

No deviations from the applicable test standard were made during testing.

1.7 EUT Modification Record

The table below details modifications made to the EUT during the test programme.

The modifications incorporated during each test are recorded on the appropriate test pages.

Modification State	Description of Modification still fitted to EUT	Modification Fitted By	Date Modification Fitted
DSC/VHF Radio, Model: X-100, Serial Number: 4310002011730002			
0	As supplied by the customer	Not Applicable	Not Applicable
DSC/VHF Radio - Model: X-100, Serial Number: 230587			
8	Software update to v 00.08.12	Manufacturer	29-January-2025

Table 3

1.8 Test Location

TÜV SÜD conducted the following tests at our Octagon House Test Laboratory.

Test Name	Name of Engineer(s)	Accreditation
Configuration and Mode: AIS Transceiver - Operational		
Bandwidths	Roscoe Harrison	UKAS
Transmitter Frequency Tolerances	Joshua Peplow-Williams	UKAS
Spurious Emissions at Antenna Terminals	Joshua Peplow-Williams	UKAS
Radiated Spurious Emissions	Joshua Peplow-Williams	UKAS
Modulation Requirements	Joshua Peplow-Williams	UKAS
Transmitter Power	Joshua Peplow-Williams	UKAS
Suppression of Interference Aboard Ships	Joshua Peplow-Williams	UKAS

2 Test Details

2.1 Bandwidths

2.1.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.205
FCC 47 CFR Part 2, Clause 2.1049
ISED RSS-182, Clause 5.2
ISED RSS-GEN, Clause 6.7

2.1.2 Equipment Under Test and Modification State

X-100, S/N: 230587 - Modification State 8

2.1.3 Date of Test

14-April-2025

2.1.4 Test Method

AIS Transceiver - Operational

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.205, Part 2.1049, ISED RSS-GEN Clause 6.6 and ANSI C63.26-2015, Subclause 5.4.3.

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using a PRBS packet payload. The EUT was connected to a spectrum analyser via a coaxial cable and attenuators, the RBW of the spectrum analyser was set to at least 1% of the emission bandwidth and a video bandwidth of 3 times RBW, the occupied bandwidth measurement function of the analyser was used and the 99% bandwidth was recorded.

The plots on the following pages show the resultant display from the Spectrum Analyser.

2.1.5 Environmental Conditions

Ambient Temperature	21.2 °C
Relative Humidity	36.8 %

2.1.6 Test Results

AIS Transceiver - Operational

99% Occupied Bandwidth (kHz)	
156.025 MHz	162.025 MHz
9.47	9.44

2.2 Transmitter Frequency Tolerances

2.2.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.209
FCC 47 CFR Part 2, Clause 2.1055
ISED RSS-182, Clause 5.5
ISED RSS-GEN, Clause 6.11.

2.2.2 Equipment Under Test and Modification State

X-100, S/N: 230587 - Modification State 8

2.2.3 Date of Test

15-May-2025

2.2.4 Test Method

AIS Transceiver - Operational

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.209 (a) and FCC CFR 47 Part 2.1055 (a) (2), (d) (1).

The EUT was set to transmit on maximum power with an unmodulated carrier on bottom and top channels. The EUT was connected to a Spectrum Analyser using an external 10 MHz frequency reference. The difference between the frequency of the fundamental and the frequency of the assigned channel in accordance with the manufacture's documentation was recorded, this was done using a single marker method on the analyser. In accordance with 2.1055, the temperature was varied from -20°C to +50° in 10° steps. At both minimum and maximum voltage extremes the frequency error was measured at nominal temperature.

The settings on the Spectrum analyser were as follows:

RBW - 100 Hz
VBW - 300 Hz
Span - 25 KHz
Sweep points - 100001
Sweep time - Auto
Trace - Max Hold
Detector - Peak

2.2.5 Environmental Conditions

Ambient Temperature	20.4 °C
Relative Humidity	40.0 %

2.2.6 Test Results

AIS Transceiver - Operational

2.3 Spurious Emissions at Antenna Terminals

2.3.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.211
FCC 47 CFR Part 2, Clause 2.1051
ISED RSS-182, Clause 5.9
ISED RSS-GEN Clause 6.13.

2.3.2 Equipment Under Test and Modification State

X-100, S/N: 230587 - Modification State 8

2.3.3 Date of Test

16-May-2025 to 21-May-2025

2.3.4 Test Method

AIS Transceiver – Operational

For emissions where the frequency is removed less than 250% of the authorized bandwidth measurements were performed conducted as follows:

The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss between the EUT and analyser was calibrated using a network analyser and entered in to the spectrum analyser as a reference level offset. The reference level for the mask was established with an RBW approximately 2 or 3 times the emission bandwidth. The RBW was then reduced to at least 1% of the emission bandwidth, with a VBW of 3 times RBW. The mask as per FCC CFR 47 Part 80.211 (f) was applied.

For emissions where the frequency is removed more than 250% of the authorized bandwidth measurements were performed conducted as follows:

Conducted: A network analyser was used to measure the path loss, and the worst case was entered as a reference level offset in to the spectrum analyser. The EUT was connected to a spectrum analyser via an attenuator, filter and cable. Between 9 kHz and 300 MHz a 50.4dB of attenuation was used to protect the analyser. Between 300 MHz and 2 GHz a 300 MHz high pass filter was used. The spectrum analyser was configured with an RBW of 100 kHz below 1 GHz and 1 MHz for frequencies greater than 1 GHz with the trace set to max hold using a peak detector.

FCC 47 CFR Part 80, Limit Clause 80.211

Within 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: At least 25 dB;

On any frequency removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: At least 35 dB

More than 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least 43 plus $10\log_{10}$ (mean power in watts) dB.

ISED RSS-182, Limit Clause 5.9.1

On any frequency removed from the carrier frequency by more than 50%, but not more than 100% of the authorized bandwidth: at least 25 dB, measured with a bandwidth of 300 Hz.

On any frequency removed from the carrier frequency by more than 100%, but not more than 250% of the authorized bandwidth: at least 35 dB, measured with a bandwidth of 300 Hz.

On any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth: at least $43 + 10 \log_{10} p(\text{watts})$ dB, measured with a bandwidth of 30 kHz.

2.3.7 Test Location and Test Equipment Used

2.4.4 Test Method

AIS Transceiver – Operational

A preliminary profile of the Radiated Spurious Emissions was obtained up to the 10th harmonic by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

The EUT was powered using a DC power supply at 12 V.

Testing was performed in accordance with ANSI C63.26, Clause 5.5.

Prescans and final measurements were performed using the direct field strength method. Field strength measurements were performed and then converted to Equivalent Power Measurements in accordance with ANSI C63.26, Clause 5.2.7 equation c)

Example calculation:

$E \text{ (dBuV/m)} + 20\log(d) - 104.8 = \text{EIRP (dBm)}$ where (d) is the measurement distance.

$82.2 \text{ (dBuV/m)} + 20\log(3) - 104.8 = \text{EIRP (dBm)}$

$-13.0 = \text{EIRP (dBm)}$

2.5.4 Test Method

AIS Transceiver – Operational

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.213 (d).

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using either PRBS, 01010101 or 00001111 packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, using the FM demodulation function of the spectrum analyser, the peak frequency deviation was observed and shown in the plots on the following pages.

Ship and coast station transmitters operating in the 156–162 MHz and 216–220 bands must be capable of proper operation with a frequency deviation that does not exceed ± 5 kHz when using any emission authorized by § 80.207

ISED RSS-182, Limit Clause 5.7

The VHF AIS equipment shall comply with the following characteristics.

Transmitter frequency: 161.975 MHz (channel AIS1)
162.025 MHz (channel AIS2)
Channel spacing: 25 kHz or 12.5 kHz
Modulation scheme: GMSK/FM
Modulation index: 0.5 max. for 25 kHz channel spacing
0.25 max. for 12.5 kHz channel spacing
Transmission rate: 9600 bps

2.5.7 Test Location and Test Equipment Used

Table 17 - Transmitter Power

FCC 47 CFR Part 80, Limit Clause 80.215 (e)

Ship station frequencies above 27500 kHz. The maximum power must not exceed the values listed below:

1. Ships Stations: 156 to 162 MHz - 25 W
2. Marine Utility Stations and Handheld Portable Transmitters: 156 to 162 MHz - 10 W

ISED RSS-182, Limit Clause 5.6

The output power for equipment certified under RSS-182 shall not exceed the limits specified in the table below:

Radio Equipment Type	Maximum Power
Coast Station	50 W
Ship Stations	25 W
Shipborne hand-held portable transmitter	6 W

Table 18 - Power Limits Table (RSS-182)

Ship station transmitters shall have power control features implemented to reduce the carrier power to 1 W or less for use at short ranges, except for DSC equipment operating on the 156.525 MHz (channel 70) frequency, for which the power reduction facility is optional.

Survival two-way radiotelephones should have a minimum equivalent isotropically radiated power (e.i.r.p.) of 0.25 W.

2.6.7 Test Location and Test Equipment Used

This test was carried out in RF Laboratory 1.

2.7.2 Equipment Under Test and Modification State

X-100, S/N: 230587 - Modification State 8

2.7.3 Date of Test

21-May-2025

2.7.4 Test Method

AIS Transceiver – Operational

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.217 (b) and KDB 971168.

A network analyser was used to measure the path loss and the worst case was entered as a reference level offset in to the spectrum analyser for each frequency range of interest. The EUT was connected to a spectrum analyser via a cable and attenuator. The EUT was configured in a receive only state. The spectrum analyser settings were configured with an RBW of 100 kHz below 1 GHz and 1 MHz for frequencies greater than 1 GHz using a VBW of 3 times the RBW. The trace set to max hold using a peak detector and the plots recorded as shown.

2.7.5 Environmental Conditions

Ambient Temperature 21.4 °C
Relative Humidity 40.0 %

4 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

Test Name	Measurement Uncertainty
Bandwidths	± 58.05 Hz
Transmitter Frequency Tolerances	± 11 Hz
Spurious Emissions at Antenna Terminals	± 3.45 dB
Radiated Spurious Emissions	30 MHz to 1 GHz: ± 5.2 dB 1 GHz to 18 GHz: ± 6.3 dB
Modulation Requirements	-
Transmitter Power	± 3.2 dB
Suppression of Interference Aboard Ships	± 3.45 dB

Table 23

Measurement Uncertainty Decision Rule

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115:2021, Clause 4.4.3 (Procedure 2). The measurement results are directly compared with the test limit to determine conformance with the requirements of the standard.

Risk: The uncertainty of measurement about the measured result is negligible with regard to the final pass/fail decision. The measurement result can be directly compared with the test limit to determine conformance with the requirement (compare IEC Guide 115). The level of risk to falsely accept and falsely reject items is further described in ILAC-G8.
