

7. RF Exposure Requirements

7.1 Limit

According to FCC 15.247(e)(i) and FCC 1.1307(b)(1), 2.1091 Systems operating under provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commissions guidelines.

7.2 MPE Calculation Method

The MPE was calculated at a given distance to show compliance with the power density limit.
The following formula was used to calculate the Power Density:

$$S = PG/4\pi R^2$$

S=Power density (in appropriate units, e.g. mW/cm²)

P=Power input to the antenna

G=Power gain of the antenna relative to an isotropic radiator

R=Distance to the center of radiation of the antenna (e.g. cm)
