

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are covered with white, square-shaped electromagnetic shielding tiles. A yellow test fixture is positioned on a circular turntable in the center of the chamber. A metal frame is visible in the foreground.
Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test chamber, similar to the one above. The interior walls are covered with white, square-shaped electromagnetic shielding tiles. A yellow test fixture is positioned on a circular turntable. In the foreground, there is a metal frame with several vertical rods, likely for mounting antennas or sensors.

Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white, rectangular test item is placed on a yellow cardboard box in the center of an anechoic chamber. The chamber walls are covered with white, square-shaped absorbers. The floor is covered with blue, conical-shaped absorbers. A red, horn-shaped antenna is positioned to the right of the test item, connected to a black cable. A black, cylindrical antenna is also visible on the right side of the frame.
Radiation Emission Test Setup (Above 18GHz)	 A photograph of a radiation emission test setup for frequencies above 18GHz. The same white, rectangular test item is placed on the same yellow cardboard box in the center of the anechoic chamber. The walls are covered with white, square-shaped absorbers, and the floor is covered with blue, conical-shaped absorbers. A blue, flexible antenna is positioned to the right of the test item, connected to a blue cable. A black, cylindrical antenna is also visible on the right side of the frame.
