

Type and shape of antenna	IFA/SLOOP Antenna
Directional characteristics	Omni-directional
Deflection Characteristics of Antenna	Linear
Type of connection with transmitter	antenna shrapnel
Manufacturer	Huizhou speed wireless technology co.,ltd ShangHai Innwave Communication Technology Co., LTD
Measuring Organization	Huizhou speed wireless technology co.,ltd ShangHai Innwave Communication Technology Co., LTD

1.EUT Reference Setup

Tester	FengShuo/YinChun
Actual date of testing	2025-09-14
Test description	Use an anechoic chamber to measure the radiation pattern and antenna gain. The GTS laboratory operates at 0.6-5.9GHz. The chamber's reflection level in the range of 0.6GHz to 5.9 GHz is typically ≤ 25 dB. Standard dipoles are used to calibrate for path loss and magnetic ring lines are used to suppress feeder emissions, so we can measure antenna gain.

Test Equipment List

Name of test equipment	Model	Manufacturer	Cal.Due Date	Calibtation Interval
Pattern Measurement Software	General Test	Ray Zone 1800	NA	NA
Network Analyzer	Agilent	E5071B	2025-07-20	One year

2. Antenna Gain

	Test band	Gain(ANT1)	Gain(ANT2)	Gain(ANT4)	Gain(ANT7)
GSM	B5(850)	-4.5	/	-5.7	/
