

TEST REPORT

Test Report No. : UL-RPT-RP82375JD01A V5.0

Manufacturer : Access-IS
Model No. : OCR640
FCC ID : ZEROOCR640
IC Certification No. : 9653A-OCR640
Technology : RFID – 13.56 MHz
Test Standard(s) : FCC Part 15.225: 2011 Subpart C;
Industry Canada RSS-210 Issue 8 December 2010 & RSS-Gen Issue
3 December 2010

1. This test report shall not be reproduced in full or partial, without the written approval of UL VS LTD.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 5.0 supersedes Test Report Serial Number RFI-RPT-RP82375JD01A V4.0. The original test report was issued under the previous company name of RFI Global Services Ltd

Date of Issue: 16 July 2015

Checked by:

Ian Watch
Senior Engineer, Radio Laboratory

Issued by :

1. Customer Information

Company Name:	Access-IS
Address:	18 Suttons Business Park Reading Berkshire RG6 1AZ United Kingdom

2. Summary of Testing

2.1. General Information

Specification Reference:	47CFR15.225
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications) 2011: Part 15 Subpart C (Radio Frequency Devices) - Section 15.225
Specification Reference:	47CFR15.107 and 47CFR15.109
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications) 2011: Part 15 Subpart B (Radio Frequency Devices) - Sections 15.107 and 15.109
Specification Reference:	47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications) 2011: Part 15 Subpart C (Intentional Radiators) - Section 15.209
Specification Reference:	RSS-Gen Issue 3 December 2010
Specification Title:	General Requirements and Information for the Certification of Radio Apparatus
Specification Reference:	RSS-210 Issue 8 December 2010
Specification Title:	Licence-exempt Radio Apparatus (All Frequency Bands): Category I Equipment.
Site Registration:	FCC: 209735; Industry Canada: 3245B-2
Location of Testing:	UL VS LTD, Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom
Test Dates:	07 July 2011 to 16 July 2012

2.2. Summary of Test Results

FCC Reference (47CFR)	IC Reference	Measurement	Result
Part 15.207	RSS-Gen 7.2.4	Transmitter AC Conducted Emissions	
Part 15.225(a)(b)(c)(d)	RSS-Gen 4.8 RSS-210 A2.6	Transmitter Fundamental Field Strength	
Part 15.209(a)/ 15.225(d)	RSS-Gen 4.9 RSS-210 A2.6	Transmitter Radiated Emissions	
Part 15.209(a)/ 15.225(c)(d)	RSS-Gen 4.9 RSS-210 A2.6	Transmitter Band Edge Radiated Emissions	
Part 2.1049	RSS-Gen 4.6.1/4.6.3	Transmitter 20 dB Bandwidth	
Part 15.225(e)	RSS-Gen 4.7 RSS-210 A2.6	Transmitter Frequency Stability (Temperature & Voltage Variation)	
Key to Results  = Complied  = Did not comply			

2.3. Methods and Procedures

Reference:	ANSI C63.4 (2009)
Title:	American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz
Reference:	ANSI C63.10 (2009)
Title:	American National Standard for Testing Unlicensed Wireless Devices

2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	Access-IS
Model Name or Number:	OCR640
Serial Number:	ENG001
Hardware Version Number:	ENG001
Software Version Number:	RFID : 1.16 Camera : 2.04
FCC ID:	ZEROOCR640
IC Certification Number:	9653A-OCR640

Brand Name:	Access-IS
Model Name or Number:	OCR640
Serial Number:	AKEAUSK870/1
Hardware Version Number:	ENG001
Software Version Number:	RFID : 1.16 Camera : 2.04
FCC ID:	ZEROOCR640
IC Certification Number:	9653A-OCR640

Description:	USB/DC cable
Brand Name:	Access-IS
Model Name or Number:	MICR Host cable
Serial Number:	Not marked or stated

Description:	120 VAC 60 Hz Power supply
Brand Name:	Ideal Power
Model Name or Number:	SA06-12S05R-V
Serial Number:	Not marked or stated

3.2. Description of EUT

The equipment under test was an RFID ePassport reader.

3.3. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.4. Additional Information Related to Testing

Tested Technology:	RFID	
Category of Equipment:	Transceiver	
Channel Spacing:	Single channel device	
Transmit Frequency Range:	13.56 MHz	
Power Supply Requirement:	Nominal	120 VAC 60 Hz
	Minimum	102 VAC 60 Hz
	Maximum	138 VAC 60 Hz
Tested Temperature Range:	Minimum	-20°C
	Maximum	50°C

3.5. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Dell Laptop
Brand Name:	Dell
Model Name or Number:	D410
Serial Number:	2836C2J

4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- Constantly transmitting and receiving at maximum power with a modulated carrier in RFID test mode.
- Frequency tolerance tests were performed with the EUT transmitting an un-modulated carrier. All other tests were performed with the EUT transmitting with normal modulation.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- A laptop PC running customer specific test software (Iscape) was used to control the transceiver function of the EUT during testing via the MICR Host cable. The camera function was enabled during all tests.
- AC conducted emissions tests were performed with a dummy load attached to the antenna port in accordance with FCC KDB 174176.
- A modified USB cable with DC breakout was used for voltage extremes tests. This cable was connected to a bench power supply in order to vary the voltage to the EUT.
- The unit has two integral antennas with two identical transmit paths as shown in the block diagram below. The carrier is continually switched between the two paths.
- Antenna #2 was used to make the measurements as it emitted a higher level RF field strength than Antenna #1.

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6: Measurement Uncertainties* for details.

5.2. Test Results

5.2.1. Transmitter AC Conducted Spurious Emissions

Test Summary:

Test Engineer:	David Doyle	Test Date:	13 July 2012
Test Sample Serial No:	AKEAUSK870/1		

FCC Part:	15.207
Test Method Used:	As detailed in ANSI C63.10 Section 6.2 referencing ANSI C63.4

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	52

Results: Live - Quasi Peak

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.191	Live	42.7	64.0	21.3	Complied
0.501	Live	45.8	56.0	10.2	Complied
0.573	Live	43.6	56.0	12.4	Complied
10.073	Live	44.5	60.0	15.5	Complied
10.145	Live	44.6	60.0	15.4	Complied
10.361	Live	44.0	60.0	16.0	Complied

10.284	Neutral	41.7	50.0	8.3	Complied
10.568	Neutral	40.1	50.0	9.9	Complied
13.560	Neutral	48.5	50.0	1.5	Complied

Transmitter AC Conducted Spurious Emissions (continued)**Live****Neutral**

Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.

5.2.2. Transmitter Fundamental Field Strength**Test Summary:**

Test Engineer:	Crawford Lindsay	Test Date:	07 July 2011
Test Sample Serial No:	ENG001		

FCC Part:	15.225(a)(b)(c)(d)
Test Method Used:	As detailed in ANSI C63.10 Section 6.4

Environmental Conditions:

Temperature (°C):	29
Relative Humidity (%):	33

Results: Quasi Peak

Frequency (MHz)	Antenna Polarity	Level (dBμV/m)	Limit at 30 m (dBμV/m)	Margin (dB)	Result
13.56	90° to EUT	39.3	84.0	44.7	Complied

Note(s):

1. The limit is specified at a test distance of 30 metres. However, as specified by FCC Section 15.31 (f)(2), measurements may be performed at a closer distance and the measured level corrected to the specified measurement distance by using the square of an inverse linear distance extrapolation factor (40 dB/decade).
2. A transducer factor on the measuring instrument was used to extrapolate the results at 3 metres to a distance of 30 metres. A distance extrapolation factor of 40 dB was used.
3. The fundamental field strength was maximised when the tips of the measurement antenna were positioned at 90°/270° with respect to the direction of the EUT.
4. Pre-scan measurements were performed using a spectrum analyser with a peak detector and measurement bandwidth of 10 kHz. The fundamental field strength was maximized by rotating the measurement antenna and EUT. A peak level of 20.4 dBμV/m was recorded and shown on the pre-scan plot below. The peak level was also compared to requirements of the spectrum mask. The spectrum analyser was then switched to test receiver mode and the final measurement on the maximized level was performed. In accordance with ANSI C63.10 Clause 4.2.3.2.1 and CISPR 16-1-1, a quasi-peak detector was used in conjunction with a measurement bandwidth of 9 kHz and 0.2 second sweep time. A quasi-peak level of 19.3 dBμV/m was recorded. The difference between the peak level of 20.4 dBμV/m and quasi-peak level of 19.3 dBμV/m was due to the fact that the EUT was not transmitting with a 100% duty cycle.

Note: An additional 20 dB has been added to attain the final value shown in the table; this is to account for a transducer factor that was not included during the original measurement.

$$i.e.: 19.3 \text{ dB}\mu\text{V/m} + 20 \text{ dB} = 39.3 \text{ dB}\mu\text{V/m}$$

Transmitter Fundamental Field Strength (continued)

5.2.3. Transmitter Radiated Spurious Emissions**Test Summary:**

Test Engineer:	David Doyle	Test Date:	16 July 2012
Test Sample Serial No:	AKEAUSK870/1		

FCC Part:	15.225(d) & 15.209(a)
Test Method Used:	As detailed in ANSI C63.10 Sections 6.3, 6.4 and 6.5 referencing ANSI C63.4
Frequency Range:	9 kHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	25
Relative Humidity (%):	47

Note(s):

1. Limits below 30 MHz are specified at a test distance of 30 metres, whilst below 0.49 MHz they are specified at a test distance of 300 metres. However, as specified by FCC Section 15.31 (f)(2), measurements may be performed at a closer distance and the measured level corrected to the specified measurement distance by using the square of an inverse linear distance extrapolation factor (40dB/decade).
2. A transducer factor on the measuring instrument was used to extrapolate the results at 3 metres to a distance of 30 metres where required. A distance extrapolation factor of 40 dB was used.
3. Final measurement values include corrections for antenna factor and cable losses.
4. The emission shown at approximately 13.56 MHz is the fundamental.
5. All emissions on the 9 kHz to 150 kHz plot were investigated and found to be radiating from the test site turntable.
6. All other emissions shown on the pre-scan plots were investigated and found to be >20 dB below the applicable limit or below the measurement system noise floor.
7. Measurements in the range 30 MHz to 1 GHz were performed in a semi-anechoic chamber (RFI Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

Transmitter Radiated Spurious Emissions (continued)**Results: Quasi Peak**

Frequency (MHz)	Antenna Polarity	Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
114.391	Horizontal	33.8	43.500	9.700	Complied
126.612	Vertical	33.5	43.500	10.000	Complied
257.594	Vertical	28.4	46.000	17.600	Complied
308.000	Vertical	40.2	46.000	5.800	Complied
336.022	Vertical	41.9	46.000	4.100	Complied
360.014	Vertical	42.3	46.000	3.700	Complied
364.017	Vertical	39.5	46.000	6.500	Complied
420.024	Vertical	41.5	46.000	4.500	Complied
480.025	Horizontal	40.6	46.000	5.400	Complied
532.010	Vertical	41.7	46.000	4.300	Complied

Transmitter Radiated Spurious Emissions (continued)

Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying table.

5.2.4. Transmitter Band Edge Radiated Emissions**Test Summary:**

Test Engineer:	Crawford Lindsay	Test Date:	07 July 2011
Test Sample Serial No:	ENG001		

FCC Part:	15.225(c)(d) & 15.209(a)
Test Method Used:	As detailed in ANSI C63.10 Section 6.9.2

Environmental Conditions:

Temperature (°C):	29
Relative Humidity (%):	33

Results: Quasi Peak Lower Band Edge

Frequency (MHz)	Level (dBµV/m)	Limit (dBµV/m)	Margin (dB)	Result
13.11	-1.2	29.5	30.7	Complied

Results: Quasi Peak Upper Band Edge

Frequency (MHz)	Level (dBµV/m)	Limit (dBµV/m)	Margin (dB)	Result
14.01	-0.8	29.5	30.3	Complied

Note(s):

1. A transducer factor on the measuring instrument was used to extrapolate the results at 3 metres to a distance of 30 metres where required.
2. A transducer factor on the measuring instrument was used to extrapolate the results at 3 metres to a distance of 30 metres where required. A distance extrapolation factor of 40 dB was used.
3. The band edge emission plot shown below is low by a factor of 20 dB, due to the absence of a transducer factor at the time of measurement. An additional 20 dB has been subsequently added to any band edge measurements, for comparisons with the limit, when determining compliance.

Transmitter Radiated Emissions at Band Edges (continued)

5.2.5. Transmitter 20 dB Bandwidth**Test Summary:**

Test Engineer:	Crawford Lindsay	Test Date:	07 July 2011
Test Sample Serial No:	ENG001		

FCC Part:	2.1049
Test Method Used:	As detailed in ANSI C63.10 Section 6.9.1

Environmental Conditions:

Temperature (°C):	29
Relative Humidity (%):	33

Results:

20 dB Bandwidth (kHz)
32.865

5.2.6. Transmitter Frequency Stability (Temperature & Voltage Variation)**Test Summary:**

Test Engineer:	Crawford Lindsay	Test Date:	11 July 2011
Test Sample Serial No:	ENG001		

FCC Part:	15.225(e)
Test Method Used:	As detailed in ANSI C63.10 Section 6.8.1 and 6.8.2

Environmental Conditions:

Ambient Temperature (°C):	20
Ambient Relative Humidity (%):	30

Results: Maximum frequency error of the EUT with variations in ambient temperature

Temperature (°C)	Time after Start-up			
	0 minutes	2 minutes	5 minutes	10 minutes
-20	13.558373 MHz	13.558394 MHz	13.558401 MHz	13.558405 MHz
20	13.558372 MHz	13.558370 MHz	13.558368 MHz	13.558366 MHz
50	13.558384 MHz	13.558374 MHz	13.558366 MHz	13.558363 MHz

Frequency with Worst Case Deviation (MHz)	Frequency Error (Hz)	Frequency Error (%)	Limit (%)	Margin (%)	Result
13.558405	33	0.009757	0.01	0.000243	Complied

Results: Maximum frequency error of the EUT with variations in nominal operating voltage at an ambient temperature of 20°C

Supply Voltage (V)	Nominal Frequency (MHz)	Measured Frequency (MHz)	Frequency Error (Hz)	Frequency Error (%)	Limit (%)	Margin (%)	Result
102	13.558372	13.558366	6	0.000044	0.01	0.009956	Complied
120	13.558372	13.558372	0	0	0.01	0.01	Complied
138	13.558372	13.558366	6	0.000044	0.01	0.009956	Complied

Note(s):

1. All measurements performed at extremes were referenced to the frequency measured at nominal temperature and nominal voltage.

6. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±3.25 dB
20 dB Bandwidth	13 MHz to 14 MHz	95%	±0.92 ppm
Frequency Stability	13 MHz to 14 MHz	95%	±0.92 ppm
Radiated Spurious Emissions	9 kHz to 30 MHz	95%	±3.53 dB
Radiated Spurious Emissions	30 MHz to 1000 MHz	95%	±2.94 dB
Transmitter Fundamental Field Strength	13 MHz to 14 MHz	95%	±3.53 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

7. Report Revision History

Version Number	Revision Details		
	Page No(s)	Clause	Details
4.0	-	-	Previous Version
5.0	14 & 19	-	Corrected previously reported emissions levels by +20 dB
