3 GENERAL PRODUCT INFORMATION

3.1 Product Function and Intended Use

ZOLL Mobile Hotspot devices are used to connect portable Defibrillator and ventilator devices to the cloud via Wi-Fi, and then send real-time data to the cloud for processing via cellular network.
It use for relay LTE over Wi-Fi.

3.2 Ratings and System Details of Equipment under Test

Table 3: Ratings and System Details as declared by the Client*

Radio Protocol		WI-FI 5GHz
Operating Frequency Range		UNII-1 _ 5150MHz to 5250MHz UNII-3 _ 5725MHz to 5850MHz
No. of Channels		(Refer Table 5)
Channel Spacing		NA
Modulation		802.11a: OFDM /64-QAM, 16-QAM, QPSK, BPSK (6 to 56Mbps) 802.11n: OFDM /64-QAM, 16-QAM, QPSK, BPSK (20MHZ and 40MHZ: MCS0 to MCS7) 802.11ac:OFDM /256-QAM, OFDM /64-QAM, 16-QAM,QPSK, BPSK(20MHZ, 40MHZ and 80MHZ: MCS0 to MCS9)
Power level setting used		Refer Clause 12
Maximum Measured Power (e.i.r.p)		19.68dBm (MCS0 5180MHz)
Number of antennas		1
Antenna Gain		5.2 dBi
Antenna Type		Internal PCB Chip Antenna
Supply Voltage to Product		5V DC, 0.5A Battery and USB Type C Port Powered 1. Primary - Battery (3.7V, 4000mAh) 2. Secondary - USB Type C (5V, 0.5A)
Environmental Conditions	Storage	-20° C to 60° C
	Operating	-10° C to 50° C
EUT Dimension		134.2mm x 80.7mm x 27.9mm (LxWxH)

***Disclaimer:** The information/data is supplied by the client and the same is considered to arrive at the final value. Any changes made apart from the specified specification, can directly impact on the tests results. Refer the products user manual for more details.

3.3 Measurement Uncertainty:

Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of $k = 2$

Table 4: Measurement Uncertainty

Parameter	Uncertainty
Occupied Channel Bandwidth	$\pm 5 \%$
RF output power, conducted	$\pm 1.5 \text{ dB}$
Power Spectral Density, conducted	$\pm 3 \text{ dB}$
Unwanted Emissions, conducted	$\pm 3 \text{ dB}$
SAC, radiated measurement	$\pm 6 \text{ dB}$
FAC, radiated measurement	$\pm 6 \text{ dB}$
Temperature	$\pm 3 \text{ }^{\circ}\text{C}$
Supply Voltages	$\pm 3 \%$
Time	$\pm 5 \%$

Note: The listed uncertainties are the worst case uncertainty for the entire range of measurements and are for the reporting purpose only and are not used in determining the PASS/FAIL of the results.

4 TEST SET-UP AND OPERATION MODE

4.1 Principle of Configuration Selection

Transmission was enabled with highest possible duty cycle on low, mid and high channels.

4.2 UUT Operation and Software

Hardware Version Identification number (HVIN) : Rev2.0
Software version : v1.0.3

4.3 Special Accessories and Auxiliary Equipment

-None

4.4 Simultaneous Transmission

Combinations of Simultaneous Operations performed	WiFi-LTE
	WiFi- WCDMA

Note: Simultaneous Operation was performed with the above mentioned combination and worst case test results are mentionrd in this report.

4.5 Countermeasures to achieve EMC Compliance

-None

4.6 List of frequencies

Frequency Band	Channel No.	Frequency (MHz)
5150–5250 MHz	36	5180
	38	5190
	46	5230
	48	5240
5725-5825 MHz	149	5745
	151	5755
	155	5775
	165	5825

Table 5: List of Wi-Fi center Frequencies

Channel used for Wi-Fi Testing

Channel Bandwidth (20MHz)	Channel Bandwidth (40MHz)	Channel Bandwidth (80MHz)
5180	5190	5210
5240	5230	5775
5745	5755	-
5825	5795	-

Note:

TUV Sample Identification number : A003124554-001– Radiated test Sample
A003124554-011– Conducted test Sample

4.7 Report Reference

Note: ZOLL Mobile Hotspot has multiple protocols. All the supported wireless protocols and their respective test results are issued in separate test reports, following table lists the report numbers.

Radio Protocol	Report Number
RF test report for Wi-Fi (2.4GHz)	ULR-TC568821300000109F
RF test report for Wi-Fi (5GHz) – (This report)	ULR-TC568821300000110F

RF test report for FCC Part 24	ULR-TC568821300000112F
RF test report for FCC Part 27	ULR-TC568821300000113F
RF test report for FCC Part 90	ULR-TC568821300000114F

5 Operational Description

ZOLL Mobile Hotspot design based on Micrchip's ATSAMA5D27C processor. The ZOLL Mobile Hotspot device features a 256 MB of DDR3L RAM and 512 MB of NAND Flash to store the data files and configurations. The ATSAMA5D27C CPU is powered using the OpenWRT Linux distribution. The " EC25-AF/EC25-AF(D) CAT 4 LTE Module" will be connected to ATSAMA5D27C CPU over the USB 2.0 interface to support the cellular connectivity. The EC25-AF/EC25-AF(D) is Cat4 LTE module supporting AT&T, T-Mobile, Verizon and FirstNet networks. It supports all major US bands. The EC25-AF/EC25-AF(D) module has 2 Antenna connections including external diversity antenna. Here internal antenna is chip antenna and a u.FL connector is on board for an External diversity Antenna. The LTE module also supports GPS and it is optional in current design. ZOLL Mobile Hotspot have dual SIM supports. The system also have Wi-Fi module AP6256 which is interfaced with the processor using SDIO 3.0 interface. Wi-Fi will be used to connect portable Defibrillator and ventilator devices to cloud. It supports 2.4GHz and 5GHz bands. The modem device is battery operated, and the main processor ATSAMA5D27C will be connected to the fuel gauge to monitor the battery status and power consumption of the entire system. The power management section is also responsible for moderating the power drawn from the defibrillator device and comply with the requirement (that the power consumption over USB must not exceed 0.5A at the peak time). Additionally, the power management section is also responsible for generating the necessary input power for several sections of the modem device. The BQ25896 is a Battery Charger with Boost converter to provide constant power to the system with the efficiency greater than 80%. The 4.2V from TPS61022 is given to PMIC which generates 3.3V, 1.25V, 1.8V, 2.5V and 1.35V for Processor, NAND Flash and Wi-Fi module, Core voltage of processor, Fuse voltage and DDR3L power supply.

6 Block Diagram

7 TEST METHODOLOGY

7.1 Conducted Spurious Emission AC Power line Test

Measured levels of ac power-line conducted emission across the 50Ω LISN port (to which the EUT is connected). All emission voltage and current measurements shall be made on each current-carrying conductor at the plug end of the EUT power cord by the use of mating plugs and receptacles on the LISN, if used. Equipment shall be tested with power cords that are normally supplied or recommended by the manufacturer and that have electrical and shielding characteristics that are the same as those cords normally supplied or recommended by the manufacturer.

The device is placed on the test table, raised 80cm above the reference ground plane. The vertical conducting plane is located 40cm to the rear of the device. AC Conducted emission measurement is made over frequency range from 150kHz to 30MHz, this measurement was performed with EUT powered by 2 methods and both method are tested individually, one with an AC adaptor with 110V AC 60Hz supply and second with Wireless charger with supply 110V AC 60Hz.

7.1.1 Test Setup Configuration

7.2 Radiated Emission Test

The radiated emission measurement was performed according to the procedures in ANSI C63.10-2013. The equipment under test (EUT) was placed at the middle of the 80 cm high turntable for below 1 GHz & 1.5 m height for above 1 GHz measurement, and the EUT is 3 meters far from the measuring antenna. The turntable was rotated 360° for obtaining the maximum emission. The height of the measuring antennas was scanned between 1 m and 4 m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations. Repeat the measurement steps until the maximum emissions were obtained. The measurement above 1000 MHz was performed by horn antenna, The measurement below 30 MHz was performed by loop antenna, Measurement from 30 MHz to 200 MHz was performed by Baloon and Biconical Antenna, and measurement from 200 MHz to 1 GHz was performed by Log-Periodic Antenna.

The EUT was rotated around the X-, Y-, and Z-Axis and the results from worst case axis are recorded

7.2.1 Test Setup Configuration

Figure 1: Frequency Range 9 kHz- 30 MHz

Figure 2: Frequency Range 30 MHz – 200 MHz

Figure 3: Frequency Range 200 MHz - 1GHz

Figure 4: Frequency Range above 1 GHz

Frequency Range 30MHz to 10th harmonics of the highest fundamental frequency

Test performed as per ANSI C63.10-2013

Radiated spurious emission test are performed as below.

All the radiated emission measurements are performed in accordance with common requirement specified in 5.2 followed by substitution measurement as listed below

The equipment under test is placed on non-conductive table at 3m away from the receive antenna in accordance with above mentioned standard. Turn table is rotated through 360 degree, and receiver antenna height is varied in order to determine the level of maximum emission. The maximum emission level and position of the maximized emission is recorded with use of spectrum analyzer.

EUT power measured in a radiated test configuration using the signal (antenna) substitution techniques as per ANSI C63.10-2013 clause G.5.3

The ERP/EIRP may be determined from the power setting of a signal generator used in the signal (antenna) substitution test configuration as follows in Equation

$$\text{ERP EIRP} = \text{PT} + \text{GT} - \text{LC}$$

where

PSG is the power setting of the signal generator that produces the same received power reading as the DUT, in dBm, dBW, or psd

GT is the gain of the substitute antenna, in dBd (i.e., ERP) or dBi (i.e., EIRP)

LC is the signal loss in the cable connecting the signal generator to the substitute antenna, in dB

Test site-up for radiated measurements

Substitution method set-up for radiated emission

8 TEST RESULTS

8.1 Emission Bandwidth

Result

Pass

Test Specification	FCC part 15 Subpart C 15.407 (a) & (e), Part 2.202 / RSS GEN, RSS 247 Issue 2, Section 6.2.4.1 & RSS Gen Issue 5, Section 6.7
Test Method	Subclause 11.8.1 & 6.9.2 of ANSI C63.10
Measurement Bandwidth	Refer Test Method below
Detector	Refer Test Method below
Port of testing	Antenna port
Requirement	1. 99% emission band width measurement for reporting purpose only in the band 5150-5250 MHz 2. For equipment operating in the band 5725-5850 MHz, the minimum 6 dB bandwidth shall be at least 500 kHz

Test Method:

The following procedure shall be used for measuring (99%) power bandwidth:

1. Set center frequency to the nominal EUT channel center frequency
2. Set span = 1.5 times to 5.0 times the OBW
3. Set RBW = 1% to 5% of the OBW
4. Set VBW $\geq 3 \times$ RBW
5. Use the 99% power bandwidth function of the instrument
6. Use sample detector with single sweep mode, or use Peak detector and Max Hold mode (until the trace is stabilized)

The following procedure shall be used for measuring 6dB or 26dB emission bandwidth:

1. Set center frequency to the nominal EUT channel center frequency
2. Set span = 1.5 times to 5.0 times the OBW
3. Set RBW = 1% to 5% of the OBW (for 26 dB BW) & 100 kHz (for 6dB BW)
4. Set VBW $\geq 3 \times$ RBW
5. Determine the “-xx dB down amplitude” using [(reference value) – xx]. Alternatively, this calculation may be made by using the marker-delta function of the instrument.

Note : All the steps in measurement method of KDB 789033 D02, ANSI C63.10 section 6.9.2 & 6.9.3, RSS GEN section 6.9 are followed

8.2 Maximum Conducted Output Power

Result

Pass

Test Specification	FCC part 15 Subpart C 15.407 (a) / RSS 247 Issue 2 Section 6.2.1 & Section 6.2.4
Test Method	Subclause 11.9.2.3 of ANSI C63.10
Measurement Bandwidth	-
Detector	Average (Gated RMS)
Port of testing	Antenna port
Requirement for FCC	1. For client devices in the 5.15-5.25 GHz band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW 2. For the band 5.725-5.85 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W
Requirement for IC	1. For the band 5.15-5.25 GHz, the maximum e.i.r.p. shall not exceed 200 mW or $10 + 10 \log_{10}(B)$, dBm, whichever power is less. B is the 99% emission bandwidth in megahertz 2. For the band 5.725-5.85 GHz, The maximum conducted output power shall not exceed 1 W

Test Method

Test Condition:

Normal Test Condition:

Temperature (Norm) = + 24.5 °C

Voltage = Internal Battery + 5.0 V DC

Relative humidity: 63%

Prüfbericht - Nr.:
Test Report No.:

Page 42 of 99

KDB Guidelines applied:

Measurements were made as per section E (3) sub-section (b) in KDB 789033 D02 General UNII Test Procedures New Rules v02r01

Test results:

Note:

1. All the losses are included during measurement and final values are mentioned in the test report
10 dB attenuator + 1.5 dB Cable loss = 11.5 dB total offset
2. Duty cycle correction factor is considered in Final Average power
Duty cycle Correction factor = $10 \cdot \log(1/X)$ Where X is Duty Cycle
3. This product do not support additional beamforming gain / directional gain, it uses signal antenna and hence directional gain of the single antenna is (5.2 dBi)
4. e.i.r.p = Maximum Average output power (dBm) + Antenna gain in dBi
