# TEST REPORT

EMI Test for  
FCC Certification

## REPORT NO.

HCT-EM-2004-FI005

## DATE OF ISSUE

April 23, 2020

## FCC ID

ZNFG900UM

### Applicant

LG Electronics USA, Inc.

1000 Sylvan Avenue, Englewood Cliffs NJ 07632 United States

### Product Name

Multi-band GSM/CDMA/WCDMA/LTE Phone with WLAN, Bluetooth and NFC

### Model Name

LM-G900UM

### Series Model Name

Refer to the clause 1.1 Description of EUT

### Travel Adaptor Information

Model name: MCS-H06WA

Manufacturer: AOHA

### Date of Test

April 06, 2020 to April 20, 2020

### Test Standard Used

FCC CFR 47 PART 15 Subpart B Class B

ANSI C63.4-2014

### Test Results

Refer to the present document

### Manufacturer

LG Electronics Inc.

The result shown in this test report refer only to the sample(s) tested unless otherwise stated.

### Tested by

Ki-Min Lee

(signature)

### Technical Manager

Kyoung-Hee Yoon

(signature)

## REVISION HISTORY

The revision history for this test report is shown in table.

| Revision No. | Date of Issue  | Description     |
|--------------|----------------|-----------------|
| 0            | April 23, 2020 | Initial Release |

The device bearing the trade name and model specified above, has been shown to comply with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-2014. (See Test Report if any modifications were made for compliance)

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

HCT certifies that no party to application has been denied the FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C 862

This Test Report is not related to the accredited test result by KOLAS (Korea Laboratory Accreditation Scheme) / A2LA(American Association for Laboratory Accreditation), which signed the ILAC-MRA.

| 5G NR n66          | 2 110 MHz to 2 200 MHz                                                             | 1 710 MHz to 1 780 MHz       |
| 5G NR n71          | 617 MHz to 652 MHz                                                                 | 663 MHz to 698 MHz           |

## 1.2 Tested System Details

All equipment descriptions used in the tested system (including inserted cards) are:

| Device Type    | Model Name                                      | Serial Number | Manufacturer |
|----------------|-------------------------------------------------|---------------|--------------|
| EUT            | LM-G900UM                                       | -             | LG           |
| Data Cable     | EAD64746102                                     | -             | LUXSHARE     |
| Earphone       | EAB63728252                                     | -             | BUJEON       |
| Travel Adaptor | MCS-H06WA                                       | -             | AOHAI        |
| Micro SD Card  | SAMSUNG EVO+microSDXC<br>CLASS10 UHS-I (256 GB) | -             | SAMSUNG      |

## 1.3 Cable Description

| Product Name | Port                    | Power Cord Shielded (Y/N) | I/O Cable Shielded (Y/N) | Length (m) |
|--------------|-------------------------|---------------------------|--------------------------|------------|
| EUT          | USB Type C (Data Cable) | Y                         | N/A                      | (P) 1.0    |
|              | Earphone                | N/A                       | N                        | (D) 1.2    |

NOTE. The marked "(D)" means the data cable and "(P)" means the power cable.

## 1.4 Noise Suppression Parts on Cable (I/O Cable)

| Product Name | Port                    | Ferrite Bead (Y/N) | Location | Metal Hood (Y/N) | Location |
|--------------|-------------------------|--------------------|----------|------------------|----------|
| EUT          | USB Type C (Data Cable) | N                  | N/A      | Y                | Both End |
|              | Earphone                | N                  | N/A      | Y                | EUT End  |

### 1.5 Test Facility

Test site is located at 74, Seoicheon-ro 578beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do, South Korea. Those measurement facilities are constructed in conformance with the requirements of ANSI C63.4-2014. The Normalized site attenuations (30 MHz to 1 GHz) and Site validation (1 GHz to 18 GHz) were performed in accordance with the standard in ANSI C63.4-2014

| Measurement Facilities                                                        | Designation No. |
|-------------------------------------------------------------------------------|-----------------|
| Radiated Field strength measurement facility<br>3 m Semi Anechoic chamber     | KR0032          |
| Radiated Field strength measurement facility<br>10 m Semi Anechoic chamber #1 |                 |
| Radiated Field strength measurement facility<br>10 m Semi Anechoic chamber #2 |                 |

### 1.6 Calibration of Measuring Instrument

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturers recommendations for utilizing calibration equipment, which is traceable to recognized national standards. Especially, all antenna for measurement is calibrated in accordance with the requirements of C63.5:2017

### 1.7 Measurement Uncertainty

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.4-2014. All measurement uncertainty values are shown with a coverage factor of  $k = 2$  to indicate a 95 % level of confidence. The measurement data shown herein meets or exceeds the  $U_{CISPR}$  measurement uncertainty values specified in CISPR 16-4-2 and, thus, can be compared directly to specified limits to determine compliance.

| Parameter                                 | Expanded Uncertainty |
|-------------------------------------------|----------------------|
| Conducted Emission (0.15 MHz to 30 MHz)   | 1.8 dB               |
| 3 m Radiated Emissions (30 MHz to 1 GHz)  | 4.8 dB               |
| 3 m Radiated Emissions (1 GHz to 18 GHz)  | 5.4 dB               |
| 3 m Radiated Emissions (18 GHz to 40 GHz) | 5.7 dB               |

## 2. DESCRIPTION OF TEST

### 2.1 Measurement of Conducted Emission

The test procedure was in accordance with ANSI C63.4-2014, Clause 7.3

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN).  
If the EUT is connected to the PC through USB, the AC power-line adapter of the PC is directly connected to a line impedance stabilization network (LISN).  
Other support units were connected to the power mains through another LISN. The two LISNs provide 50 Ohm/50uH of coupling impedance for the measuring instrument.
- b. Both conducted lines are measured in Quasi-Peak and Average mode, including the worst-case data points for each tested configuration.
- c. The frequency range from 150 kHz to 30 MHz was searched.

#### Conducted Emission Limits

| Frequency<br>(MHz) | Resolution<br>Bandwidth<br>(kHz) | Class A              |                   | Class B              |                   |
|--------------------|----------------------------------|----------------------|-------------------|----------------------|-------------------|
|                    |                                  | Quasi-Peak<br>(dBμV) | Average<br>(dBμV) | Quasi-Peak<br>(dBμV) | Average<br>(dBμV) |
| 0.15 to 0.5        | 9                                | 79                   | 66                | 66 to 56*            | 56 to 46*         |
| 0.5 to 5           | 9                                | 73                   | 60                | 56                   | 46                |
| 5 to 30            | 9                                | 73                   | 60                | 60                   | 50                |

NOTE. Decreases with the logarithm of the frequency.

## 2.2 Measurement of Radiated Emission

The test procedure was in accordance with ANSI C63.4-2014, Clause 8.3

- The EUT was placed on the top of a turn table 0.8 meters above the ground at a semi-anechoic chamber.  
The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 m away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from 1 m to 4 m above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 m to 4 m and the turn table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Quasi-Peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.
- The test-receiver system was set to Peak and Average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz.
- Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response.  
(1 GHz to 40 GHz)

### Radiated Emission Limits

| Frequency<br>(MHz) | Class A                    |                                          |                                     | Class B                       |                                          |                                     |
|--------------------|----------------------------|------------------------------------------|-------------------------------------|-------------------------------|------------------------------------------|-------------------------------------|
|                    | Antenna<br>Distance<br>(m) | Field<br>Strength<br>( $\mu\text{V/m}$ ) | Quasi-Peak<br>(dB $\mu\text{V/m}$ ) | Antenna<br>Distance<br>(m)    | Field<br>Strength<br>( $\mu\text{V/m}$ ) | Quasi-Peak<br>(dB $\mu\text{V/m}$ ) |
| 30 to 88           | 10                         | 90                                       | 39.0                                | 3                             | 100                                      | 40.0                                |
| 88 to 216          | 10                         | 150                                      | 43.5                                | 3                             | 150                                      | 43.5                                |
| 216 to 960         | 10                         | 210                                      | 46.4                                | 3                             | 200                                      | 46.0                                |

| Frequency<br>(MHz) | Antenna Distance<br>(m)    | Class A                                  |                                     | Class B                       |                                          |                                     |
|                    |                            | Peak<br>(dB $\mu\text{V/m}$ )            | Average<br>(dB $\mu\text{V/m}$ )    | Peak<br>(dB $\mu\text{V/m}$ ) | Average<br>(dB $\mu\text{V/m}$ )         |                                     |
| Above 1 000        | 3                          | 80                                       | 60                                  | 74                            | 54                                       |                                     |

### 2.2.1 Frequency Range of Radiated Measurements

An unintentional radiator, including a digital device, the spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a Radiated Emission limit is specified, up to the frequency shown in the following table

| Highest frequency generated or used in the device or on which the device operates or tunes (MHz) | Upper frequency of measurement range (MHz)                          |
|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Below 1.705                                                                                      | 30                                                                  |
| 1.705 to 108                                                                                     | 1 000                                                               |
| 108 to 500                                                                                       | 2 000                                                               |
| 500 to 1 000                                                                                     | 5 000                                                               |
| Above 1 000                                                                                      | 5th harmonic of the highest frequency or 40 GHz, whichever is lower |

### 2.3 Configuration of Tested System

### 3. PRELIMINARY TEST

#### 3.1 Conducted Emission

It was tested the following operating mode, after connecting all peripheral devices.

**Operating Modes:** FRONT CAMERA & MP3 mode

REAR CAMERA & FM RADIO mode\*

IDLE mode

NOTE. The worst-case emissions are reported. \*

#### 3.2 Radiated Emission

It was tested the following operating mode, after connecting all peripheral devices.

**Operating Modes:** FRONT CAMERA & MP3 mode

REAR CAMERA & FM RADIO mode \*

IDLE mode

NOTE. The worst-case emissions are reported. \*

| 6.154000           | 39.6                | 9.000              | L1   | 10.1          | 20.4           | 60.0            |
| 6.396000           | 40.0                | 9.000              | L1   | 10.1          | 20.0           | 60.0            |
| 13.318000          | 36.2                | 9.000              | L1   | 10.3          | 23.8           | 60.0            |
| 14.488000          | 40.5                | 9.000              | L1   | 10.4          | 19.5           | 60.0            |

### Calculation Formula:

1. Conductor L1 = Hot, Conductor N = Neutral
2. Corr. = LISN Factor + Cable Loss
3. QuasiPeak or CAverage= Receiver Reading + Corr.
4. Margin = Limit – QuasiPeak or CAverage

## CAverage Final Result, Line (L1)

| Frequency<br>(MHz) | CAverage<br>(dBμV) | Bandwidth<br>(kHz) | Line | Corr.<br>(dB) | Margin<br>(dB) | Limit<br>(dBμV) |
|--------------------|--------------------|--------------------|------|---------------|----------------|-----------------|
| 0.156000           | 20.8               | 9.000              | L1   | 9.8           | 34.9           | 55.7            |

#### 4.2.3 Measuring Data

| Frequency<br>(MHz) | Quasi Peak<br>(dBμV/m) | Antenna<br>Height<br>(cm) | POL.<br>(H/V) | Azimuth<br>(deg) | Corr.<br>(dB) | Margin<br>(dB) | Limit<br>(dBμV/m) |
|--------------------|------------------------|---------------------------|---------------|------------------|---------------|----------------|-------------------|
| 33.448600          | 21.5                   | 100.0                     | V             | 195.0            | 18.5          | 18.5           | 40.0              |
| 47.324200          | 22.4                   | 100.0                     | V             | 26.0             | 19.6          | 17.6           | 40.0              |
| 68.336000          | 16.1                   | 100.0                     | V             | 96.0             | 18.3          | 23.9           | 40.0              |
| 101.981200         | 19.9                   | 225.0                     | H             | 336.0            | 15.4          | 23.6           | 43.5              |
| 114.584600         | 20.5                   | 225.0                     | V             | 229.0            | 16.8          | 23.0           | 43.5              |
| 794.403600         | 30.7                   | 174.9                     | V             | 102.0            | 30.3          | 15.3           | 46.0              |

#### - Calculation Formula:

1. POL. H = Horizontal, POL. V = Vertical
2. QuasiPeak = Reading (Receiver Reading) + Corr.
3. Corr. (Correction Factor) = Antenna Factor + Cable Loss
4. Margin = Limit - QuasiPeak

### 4.3 Radiated Emission Above 1 GHz

| 7349.105000     | 41.3          | 324.5               | H          | 83.0          | -12.5      | 32.7        | 74.0           |
| 14465.290000    | 48.2          | 248.9               | H          | 82.0          | -1.1       | 25.8        | 74.0           |

| Frequency (MHz) | CAverage (dBμV/m) | Antenna Height (cm) | POL. (H/V) | Azimuth (deg) | Corr. (dB) | Margin (dB) | Limit (dBμV/m) |
|-----------------|-------------------|---------------------|------------|---------------|------------|-------------|----------------|
| 1304.765000     | 17.2              | 249.4               | V          | 240.0         | -28.6      | 36.8        | 54.0           |
| 2034.175000     | 18.6              | 349.9               | V          | 197.0         | -26.5      | 35.4        | 54.0           |
| 3271.590000     | 20.2              | 245.6               | V          | 46.0          | -22.4      | 33.8        | 54.0           |
| 5008.595000     | 23.3              | 124.6               | V          | 59.0          | -17.8      | 30.7        | 54.0           |
| 7349.105000     | 28.0              | 324.5               | H          | 83.0          | -12.5      | 26.0        | 54.0           |
| 14465.290000    | 35.3              | 248.9               | H          | 82.0          | -1.1       | 18.7        | 54.0           |

#### - Calculation Formula:

1. POL. H = Horizontal, POL. V = Vertical
2. Peak or CAverage = Reading (Receiver Reading) + Corr.
3. Corr. (Correction Factor) = Antenna Factor+ Cable Loss –Amplifier Gain
4. Margin = Limit - Peak or CAverage

## 5. CONCLUSION

The data collected shows that the **Product Name: Multi-band GSM/CDMA/WCDMA/LTE Phone with WLAN, Bluetooth and NFC and Model: LM-G900UM** complies with §15.107 and §15.109 of the FCC rules.

## 6. APPENDIX A. TEST SETUP PHOTO

Please refer to Appendix. A and test setup photo file no. as follows;

| File No.            | Date of Issue  | Description     |
|---------------------|----------------|-----------------|
| HCT-EM-2004-FI005-P | April 23, 2020 | Initial Release |
