| <b>Address</b>              | : | 5541 Fermi Court Carlsbad, CA 92008, USA                                                         |

**Test Standard Used:** ARIB STD-T66 Version 3.7/2014-10, Second-Generation Low-Power Data Communication System/wireless LAN System, Article 2 paragraph 1 item (19).

**We Declare:**

The equipment described above is tested by Dongguan Dongdian Testing Service Co., Ltd. and in the configuration tested the equipment complied with the standard specified above. The test results are contained in this test report and Dongguan Dongdian Testing Service Co., Ltd. is assumed of full responsibility for the accuracy and completeness of these tests.

**After test and evaluation, our opinion is that the equipment provided for test compliance with the requirement of the above ARIB standard.**

## Revision History

| Rev. | Revisions     | Issue Date    | Revised By |
|------|---------------|---------------|------------|
| ---  | Initial issue | Aug. 06, 2021 |            |
|      |               |               |            |

## 1. Summary of Test Results

| CLAUSE<br>(ARIB STD-T66) | TEST PARAMETER               | RESULTS |
|--------------------------|------------------------------|---------|
| 3.2 (2)                  | Antenna Power                | Pass    |
| 3.2 (3)                  | Tolerances for Antenna Power | Pass    |
| 3.2 (4)                  | Frequency Tolerance          | Pass    |
| 3.2 (5)                  | Transmission Rate            | N/A     |
| 3.2 (7)                  | Occupied Frequency Bandwidth | Pass    |
| 3.2 (8)                  | Spread Bandwidth             | Pass    |
| 3.2 (9)                  | Spreading Factor             | Pass    |
| 3.2 (10)                 | Number of Carriers           | N/A     |
| 3.2 (11)                 | Dwell Time                   | Pass    |
| 3.2 (6)                  | Spurious Emissions           | Pass    |
| ---                      | Carrier Sense                | N/A     |
| 3.6                      | Process Gain                 | N/A     |
| 3.3 (1)                  | Secondary Radiated Emissions | Pass    |

N/A is an abbreviation for Not Applicable.

## 2. General Test Information

### 2.1. Description of EUT

|                          |                                               |
|--------------------------|-----------------------------------------------|
| EUT* Name                | : HOME THEATER SYSTEM                         |
| Model Number             | : SIGNA S4 SOUND BAR                          |
| EUT Function Description | : Please reference user manual of this device |
| Power Supply             | : AC 100-120V~ 50/60Hz 40W                    |
| Radio Specification      | : Bluetooth V5.0                              |
| Operation Frequency      | : 2402 MHz - 2480 MHz                         |
| Modulation               | : GFSK, $\pi/4$ -DQPSK, 8DPSK                 |
| Data Rate                | : 1 Mbps, 2 Mbps, 3 Mbps                      |
| Antenna Gain             | : 3.8 dBi                                     |
| Serial Number            | : N/A                                         |

Note: EUT is the abbreviation of equipment under test.

| Channel Information |                 |         |                 |         |                 |
|---------------------|-----------------|---------|-----------------|---------|-----------------|
| Channel             | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 0                   | 2402            | 27      | 2429            | 54      | 2456            |
| 1                   | 2403            | 28      | 2430            | 55      | 2457            |

| 26                  | 2428            | 53      | 2455            |         |                 |

## 2.2. Accessories of EUT

| Accessories   | Manufacturer | Model number | Description               |
|---------------|--------------|--------------|---------------------------|
| Optical Cable | TCL          | N/A          | Length: 1.80m, unshielded |
| HDMI Cable    | TCL          | N/A          | Length: 1.40m, unshielded |
| AC Cable      | TCL          | N/A          | Length: 1.40m, unshielded |

## 2.3. Assistant equipment used for test

| Assistant equipment | Manufacturer | Model number | EMC Compliance | SN  |
|---------------------|--------------|--------------|----------------|-----|
| N/A                 | N/A          | N/A          | N/A            | N/A |

## 2.4. Block diagram of EUT configuration for test

AC Mains

EUT

The test software was used to control EUT work in Continuous Tx mode, and select test channel, wireless mode as below table.

Test software: BT FCC Tool V2.24

| Tested mode, channel, information  |                  |             |                 |
|------------------------------------|------------------|-------------|-----------------|
| Mode                               | Setting Tx Power | Channel     | Frequency (MHz) |
| GFSK hopping on Tx mode            | 4                | CH0 to CH78 | 2402 to 2480    |
| $\pi/4$ -DQPSK hopping on Tx mode  | 4                | CH0 to CH78 | 2402 to 2480    |
| 8DPSK hopping on Tx mode           | 4                | CH0 to CH78 | 2402 to 2480    |
| GFSK hopping off Tx mode           | 4                | CH0         | 2402            |
|                                    | 4                | CH39        | 2441            |
|                                    | 4                | CH78        | 2480            |
| $\pi/4$ -DQPSK hopping off Tx mode | 4                | CH0         | 2402            |
|                                    | 4                | CH39        | 2441            |
|                                    | 4                | CH78        | 2480            |
| 8DPSK hopping off Tx mode          | 4                | CH0         | 2402            |
|                                    | 4                | CH39        | 2441            |
|                                    | 4                | CH78        | 2480            |
| Rx mode                            | /                | CH0         | 2402            |
|                                    | /                | CH39        | 2441            |
|                                    | /                | CH78        | 2480            |

## 2.5. Test environment conditions

During the measurement the environmental conditions were within the listed ranges:

| /                 | Normal Conditions                                                                                                                                                                           |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Temperature range | 23.8 °C                                                                                                                                                                                     |
| Humidity range    | 46.0%                                                                                                                                                                                       |
| Pressure range    | 101.4 kPa                                                                                                                                                                                   |
| Power supply      | AC 100V<br>(When the input voltage to equipment fluctuated $\pm 10\%$ , the RF unit circuit voltage fluctuation under 1%, therefore all test performed on the rated voltage for equipment.) |

The measurement result of the voltage fluctuation at RF circuit when AC 100V  $\pm 10\%$ .

| Input voltage | RF module voltage |
|---------------|-------------------|
| AC 110V       | DC 3.84V          |
| AC 100V       | DC 3.84V          |
| AC 90V        | DC 3.84V          |

Voltage regulator circuit diagram of BT module

## 2.6. Deviations of test standard

No deviation.

## 2.7. Test laboratory

Dongguan Dongdian Testing Service Co., Ltd.

Add.: No. 17, Zongbu Road 2, Songshan Lake Sci&Tech, Industry Park, Dongguan City, Guangdong Province, China, 523808.

Tel.: +86-0769-38826678, <http://www.dgddt.com>, Email: [ddt@dgddt.com](mailto:ddt@dgddt.com).

CNAS Accreditation No. L6451; A2LA Accreditation Number: 3870.01

FCC Designation Number: CN1182, Test Firm Registration Number: 540522

Innovation, Science and Economic Development Canada Site Registration Number: 10288A

Conformity Assessment Body identifier: CN0048

VCCI facility registration number: C-20087, T-20088, R-20123, G-20118

## 2.8. Measurement uncertainty

| Test Item                         | Uncertainty        |
|-----------------------------------|--------------------|
| Occupied Channel Bandwidth        | ±1%                |
| Uncertainty for radio frequency   | $1 \times 10^{-9}$ |
| RF Output Power, Conducted        | ±0.6 dB            |
| Power Spectral Density, Conducted | ±1.2 dB            |
| Unwanted Emissions, Conducted     | ±0.6 dB            |
| Temperature                       | ±0.2 °C            |
| Humidity                          | ±1%                |
| DC and Low frequency voltage      | ±0.5%              |
| Time                              | ±1%                |
| Duty Cycle                        | ±1%                |

Note: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 3. Equipment Used During Test

| Equipment                                                 | Manufacturer | Model No. | Serial No. | Last Cal.     | Cal. Interval | Calibration body |
|-----------------------------------------------------------|--------------|-----------|------------|---------------|---------------|------------------|
| <b>RF Connected Test (Tonscend RF Measurement System)</b> |              |           |            |               |               |                  |
| Spectrum analyzer                                         | R&S          | FSU26     | 200071     | Sep. 25, 2020 | 1 Year        | GRGT             |
| RF Control Unit                                           | Tonsend      | JS0806-2  | DDT-ZC0290 | Jun. 01, 2021 | 1 Year        | CCIC             |
| DC Power Source                                           | MESTEK       | DP3010B   | 0025914    | Apr. 17, 2021 | 1 Year        | CCIC             |
| MULTIMETER                                                | FLUKE        | 179       | 11400838   | Sep. 27, 2020 | 1 Year        | GRGT             |
| Test Software                                             | JS Tonscend  | JS1120-3  | Ver.2.7    | N/A           | N/A           | N/A              |

Remark: Calibration conducted in countries except Japan, which shall be equivalent to the calibration conducted by the NICT or a designated calibration agency under Article 102-18 paragraph (1).

## 4. Antenna Power and Tolerances for Antenna Power

### 4.1. Limit

|           |            |
|-----------|------------|
| Limit     | 3 mW/MHz   |
| Tolerance | +20%, -80% |

### 4.2. Block diagram of test setup

### 4.3. Test procedure

- (1) Connect each EUT's antenna output to power sensor by RF cable and attenuator.
- (2) For adaptive equipment, the measurement duration shall be long enough to ensure a minimum number of bursts (at least 10) is captured.

Note: The cable loss and attenuator loss have been put into spectrum analyzer as amplitude offset.

### 4.4. Test result

| Antenna Power                                                                                          |      |          |      |             |                  |        |        |
|--------------------------------------------------------------------------------------------------------|------|----------|------|-------------|------------------|--------|--------|
| Mode                                                                                                   | Ant  | Measured |      | Burst Ratio | Spread Bandwidth | Result | Limit  |
|                                                                                                        |      | dBm      | mW   |             | MHz              | mW/MHz | mW/MHz |
| GFSK Tx mode Hopping                                                                                   | Ant1 | 0.83     | 1.21 | 0.77        | 71.560           | 0.022  | 3      |
| $\pi/4$ -DQPSK Tx mode Hopping                                                                         | Ant1 | -0.55    | 0.88 | 0.77        | 71.810           | 0.016  | 3      |
| 8DPSK Tx mode Hopping                                                                                  | Ant1 | -0.58    | 0.87 | 0.77        | 71.810           | 0.016  | 3      |
| Note 1: Output Power Density (mW/MHz) = Total Output Power (mW) / Burst Ratio / Spread Bandwidth (MHz) |      |          |      |             |                  |        |        |
| Note 2: Burst Ratio = ON Time / (ON Time + OFF Time)                                                   |      |          |      |             |                  |        |        |

| Mode                                                             | Ant  | Stated power | Result | Tolerance | Limit                       |
|------------------------------------------------------------------|------|--------------|--------|-----------|-----------------------------|
|                                                                  |      | mW/MHz       | mW/MHz | %         | %                           |
| GFSK Tx mode Hopping                                             | Ant1 | 0.04         | 0.022  | -45.00    | + 20% $\geq$ and $\geq$ -80 |
| $\pi/4$ -DQPSK Tx mode Hopping                                   | Ant1 | 0.03         | 0.016  | -46.67    | + 20% $\geq$ and $\geq$ -80 |
| 8DPSK Tx mode Hopping                                            | Ant1 | 0.03         | 0.016  | -46.67    | + 20% $\geq$ and $\geq$ -80 |
| Tolerances for Antenna Power Limit: + 20% $\geq$ and $\geq$ -80% |      |              |        |           |                             |
| <b>Verdict : Pass</b>                                            |      |              |        |           |                             |

#### 4.5. Original test data

## 5. Frequency Tolerance

### 5.1. Limit

+/- 50 x 10<sup>-6</sup> or less (50 ppm)

### 5.2. Block diagram of test setup

### 5.3. Test procedure

- (1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Centre Frequency: The centre frequency of the channel under test.

Resolution BW: 10 kHz.

Video BW: 10 kHz.

Span: 1 MHz.

Detector: Peak.

Trace Mode: Max Hold.

- (2) When the trace is complete, find the peak value of the power envelope and record the frequency.

### 5.4. Test result

| Mode            | CH (MHz)   | Result            |                    |                    | Limit<br>(ppm) |

## 5.5. Original test data

## 6. Occupied Frequency Bandwidth

### 6.1. Limit

Permissible value for occupied bandwidth using the FH system, a hybrid system combining DS and FH systems, or a hybrid system combining FH and OFDM systems shall be 83.5 MHz or less, while necessary bandwidth (minimum occupied bandwidth sufficient to ensure information transmission of required quality at a required transmission rate for the system used under specified conditions for a given emission type) using a system other than any of the above shall be 26 MHz or less.

### 6.2. Block diagram of test setup

### 6.3. Test procedure

- (1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Centre Frequency: The centre frequency of the channel under test.

Hopping off:

Resolution BW: 30 kHz

Video BW: 30 kHz

Hopping on:

Resolution BW: 1 MHz

Video BW: 1 MHz

Span: Wide enough to cover the complete power envelope of the signal of the EUT.

Detector: Peak.

Trace Mode: Max Hold.

- (2) When the trace is complete, measure the occupied bandwidth (99% bandwidth) with spectrum analyzer's bandwidth measure function.

#### 6.4. Test result

| Mode                               | CH   | Result | Limit |

## 7. Spread Bandwidth

### 7.1. Limit

In spread spectrum systems, spread bandwidth (which refers to a frequency bandwidth with an upper limit and lower limit such that each of the mean powers radiated above the upper frequency limit and below the lower frequency limit is equal to 5 % of the total mean power radiated; this also applies hereafter) shall be 500 kHz or more.

### 7.2. Block diagram of test setup

### 7.3. Test procedure

- (1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Centre Frequency: The centre frequency of the channel under test.

Resolution BW: 1 MHz.

Video BW: 1 MHz.

Span: Wide enough to cover the complete power envelope of the signal of the EUT.

Detector: Peak.

Trace Mode: Max Hold.

- (2) When the trace is complete, measure the spread bandwidth (90% bandwidth) with spectrum analyzer's bandwidth measure function.

### 7.4. Test result

| Mode                                                                                    | Condition | CH                         | Result<br>(MHz) | Limit<br>(kHz) | Spreading<br>factor | Limit |
|-----------------------------------------------------------------------------------------|-----------|----------------------------|-----------------|----------------|---------------------|-------|

## 7.5. Original test data

## 8. Dwell Time

### 8.1. Limit

Frequency dwell time (time during which radio waves continue to be emitted at a specified frequency) of a transmitting equipment using the FHSS system shall be 0.4 seconds or less.

### 8.2. Block diagram of test setup

### 8.3. Test procedure

- (1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Centre Frequency: The centre frequency of the middle hopping channel.

Resolution BW: 1 MHz.

Video BW: 1 MHz.

Span: Zero span.

Detector: Peak.

Trace Mode: Max Hold.

Sweep: Video Trigger

- (2) When the trace is complete, measure the sending time of 1 burst and the duty cycle of 1 burst cycle.

- (3) Calculate dwell time follow below formula:

Dwell time = (0.4(s) x spreading rate x sending time of 1 burst(s))/(burst cycle(s) x No. of hopping channel)

Spreading rate = Spread bandwidth (actual measurement value)/Transmission rate.

### 8.4. Test result

| Test Mode | Antenna | Channel [MHz] | Burst Width [ms] | Total Hops | Result [s] | Limit [s] | Verdict |

## 9. Transmitter Spurious Emissions (Conducted)

### 9.1. Limit

Permissible mean power of spurious emission of each frequency supplied to a feeder, that is, mean power of spurious emission in the 1 MHz bandwidth at frequency  $f$  other than frequency band used shall be as follows:

a.  $2,387\text{MHz} \leq f \leq 2,400\text{MHz}$  and  $2,483.5\text{MHz} < f \leq 2,496.5\text{MHz}$  25  $\mu\text{W}$  or less

b.  $2,387\text{MHz} > f$  and  $2,496.5\text{MHz} < f$  2.5  $\mu\text{W}$  or less

### 9.2. Block diagram of test setup

### 9.3. Test procedure

- (1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Resolution BW: 1 MHz. Video BW: 1 MHz. Detector: Peak. Trace Mode: Max Hold.

- (2) All the emissions from 30 MHz to 13 GHz were measured and record.

### 9.4. Test result

Note: If spurious emissions are greater than [limit -3dB] in 1MHz RBW, then more detailed measurements are required. Repeat the test in 30 kHz RBW, the spurious emission value using following the formula below:

Calculated Value = (Measured Value + 15.2 dB)

15.2 dB adjustment is derived from the Conversion Factor of RBW

Conversion Factor of RBW =  $10 \times \log (\text{Reference Bandwidth} / \text{RBW of measurement}) = 15.2[\text{dB}]$

Where: Reference Bandwidth = 1 MHz

RBW of measurement = 30 kHz

## 10. Secondary Radiated Emissions

### 10.1. Limit

The limit on secondary emissions radiated from the receiving equipment within which the function of other radio equipment will not be impaired shall be, in terms of the power of a dummy antenna circuit that has the same electrical constant as the receiving antenna, 4 nW or less at a frequency below 1 GHz and 20 nW or less at a frequency of 1 GHz or higher as measured using the circuit.

### 10.2. Block diagram of test setup

### 10.3. Test procedure

(1) Connected the EUT's antenna port to the Spectrum Analyzer by suitable attenuator, set the Spectrum Analyzer as below:

Resolution BW: 100 kHz for frequency below 1 GHz and 1 MHz for frequency above 1 GHz

Video BW: 100 kHz for frequency below 1 GHz and 1 MHz for frequency above 1 GHz

Detector: Peak.

Trace Mode: Max Hold.

(2) All the emissions from 30 MHz to 13 GHz were measured and record.

### 10.4. Test result

| Test Condition | Antenna | Channel | Freq. Range | Result (dBm) | Limit | Verdict |
|----------------|---------|---------|-------------|--------------|-------|---------|
| NTNV           | ANT1    | 2402    | 30~1000     | -71.98       | -54   | Pass    |

## 11. Interference Prevention Function

### 11.1. Measurement system diagram

- 1) When transmitting identification code

- 2) Condition of measuring instrument

Demodulator must be able to demodulate the transmitting signal emitted by test equipment and to indicate the identification code.

- 3) Condition of test equipment the mode of normal use.

### 11.2. Measuring operation procedure

- 1) When test equipment has the function to transmit identification code automatically:

A) Transmit the predetermined identification code from test equipment.

B) Confirm the transmitted identification code by demodulator.

F44EFD2188D6

### 11.3. Test result: The unit does meet the requirements (Good).

Test result: The unit does meet the requirements.

Pass
