Photo 10

A close-up photograph of the internal components of a mobile phone, specifically the GPS antenna. The antenna is a small, gold-colored component with a rectangular shape and a small protrusion. It is mounted on a black printed circuit board (PCB). A red rectangular box highlights the antenna component. A red speech bubble with the text "GPS ANT" points to the antenna. The background shows other components of the phone's internal structure, including a larger black component and some wiring.
