Chapter 1

Introduction

This Chapter provides details of the iCamera2’s features, components and capabilities.

Overview

The iCamera2 has an Integrated Microcomputer and a high quality CMOS Sensor, enabling it to display high quality live streaming video over your wired LAN, the Internet, and for the iCamera2, an 802.11N Wireless LAN.

Using enhanced H.264 technologies, the iCamera2 is able to stream high quality video and audio directly to your PC. The high compression capabilities of H.264 reduce network bandwidth requirements to amazingly low levels.

Furthermore, with the built-in infrared LEDs, the Wireless IP camera can provide illumination around 5 meters long under low light conditions in a simple, economical manner.

Features

- **Standalone Design.** The iCamera2 is a standalone system with built-in CPU and Video encoder. It requires only a power source and a connection to your LAN or Wireless LAN.
- **Dual Video Support.** The iCamera2 can support H.264 and MJEPG video for different image compression.
- **Stream Live Video to Multiple Users.** The video encoder and HTTP server built into the camera generate a ready-to-view video stream. Just connect to the camera using your Web browser to view live video.
- **Suitable for Home, Business or Public Facilities.** Whether for Home, Business or Public Facility surveillance, or just for entertainment and fun, the iCamera2 has the features you need.
- **Multi-Protocol Support.** Supporting TCP/IP networking, HTTP and other Internet related protocols, the iCamera2 can be easily integrated into your existing network.
- **IR LEDs Support.** Each iCamera2 has two infrared LEDs. The LEDs can provide illumination around 5 meters long, that can help to output a better video quality while under low-light conditions such as indoors, on cloudy days, or in the morning or evening.
- **Motion Detection.** This feature can detect motion in the field of view. The iCamera2 will compare consecutive frames to detect changes caused by the movement of large objects. This function only works indoors due to the sensitivity of the CMOS sensor. When motion is detection or some other action may be triggered.
- **Flexible Scheduling.** You can limit access to the video stream to specify times using a flexible scheduling system. The Motion Detection feature can also have its own schedule, so it is active only when required.
- **Syslog Support.** If you have a Syslog Server, the iCamera2 can send its log data to your Syslog Server.
- **Audio Support.** You can listen as well as look! Audio is encoded with the video if desired. With built-in microphone, it is useful for bi-direction voice conversation.
- **Day/Night Switch.** With the day/night switching feature, you are able to view and record better images even in the dark of night.

### Internet Features

- **User-definable HTTP/HTTPS port number.** This allows Internet Gateways to use "port mapping" so the iCamera2 and a Web Server can share the same Internet IP address.
- **NTP (Network-Time-Protocol) Support.** NTP allows the iCamera2 to calibrate its internal clock from an Internet Time-Server. This ensures that the time stamp on Video from the iCamera2 will be correct.

### Security Features

- **User Authentication.** If desired, access to live video can be restricted to known users. Users will have to enter their username and password before being able to view the video stream.
- **Password-Protected Configuration.** Configuration data can be password protected, so that it only can be changed by the iCamera2 Administrator.

### Wireless Features

- **Supports 11n Wireless Stations.** The 802.11n standard provides for backward compatibility with the 802.11b standard, so 802.11n, 802.11b and 802.11g Wireless stations can be used simultaneously.
- **Wired and Wireless Network Support.** The iCamera2 supports either wired or wireless transmission.
- **WEP Support.** Full WEP support (64/128 Bit) on the Wireless interface is provided.
- **WPA/WPA2 Support.** The WPA Personal/WPA2 Personal standard is also supported, allowing advanced encryption of wireless data.
- **WPS Support.** WPS (Wi-Fi Protected Setup) can simplify the process of connecting any device to the wireless network by using the push button configuration (PBC) on the iCamera2, or entering a PIN code if there's no button.
### Physical Details - iCamera2

#### Front - iCamera2

![Figure 1: Front Panel](image)

1. **Light Sensor**
   - This is hardware sensor to detect LUX.

2. **Lens**
   - No physical adjustment is required or possible for the lens, but you should ensure that the lens cover remain clean. The image quality is degraded if the lens cover is dirty or smudged.

3. **POWER/WiFi indicator (Green)**
   - **On** (Green) - Power is on.
   - **Off** - Power is off.
   - **Flashing** - Wifi signal-strength indication.
     - The LED indicates SNR for the first 5 minutes after the camera is powered on. Then it will stay solid to indicate power LED for 5 minutes when wireless setup is ready.
     - Flashing Low at 1/2Hz - WiFi signal is weak, SNR < 15 dB
     - Flashing Middle at 2Hz - WiFi signal is acceptable, SNR 15-22 dB
     - Flashing High at 5Hz - WiFi signal is strong, SNR > 22 dB

4. **Network indicator (Green)**
   - **On** - LAN/Wireless connection established.
   - **Off** - No active connection on the corresponding LAN port, or not associated to Wireless AP.
   - **Flashing** - Data is being transmitted or received.

5. **WPS indicator (Green)**
   - **On** - If the WPS association fails, the WPS LED will be on continuously for 5 seconds.
   - **Off** - WPS function is off.
   - **Flashing** - WPS association is in process. The LED goes off when the connection is complete.
1. **LAN Port**
   Use standard Ethernet cable (RJ45 connectors) to connect your PC to the port for installation and configuration. The port is also used for power connection when the camera is under wireless mode. A customized PoE (Power over Ethernet) splitter, as a Y-cable, for both Ethernet and DC Jack is provided.

2. **WPS/Reset**
   This button has two (2) functions:
   - **WPS.**
     - **WPS PBC Mode**
       1. Turn on the camera without connecting the Ethernet cable.
       2. Wait for three minutes, and then press and release (less then 3 seconds). The WPS LED will start blinking. Press the WPS button on the gateway within two minutes.
       3. The WPS LED will be off and the Network LED will be on if the connection is successful.
     - **WPS Pin Code Mode**
       1. Turn on the wireless camera without connecting the Ethernet cable.
       2. Wait for three minutes, and then press and hold the button for over three seconds (3 ~ 10 seconds). The WPS LED will start blinking.
       Get the pin code in the "WSC PIN Code" field of Wireless screen (camera’s web interface). Enter the pin code on the gateway within two minutes.
       3. The WPS LED will be off and the Network LED will be on if the connection is successful.
   - **Reset.**
     1. Power On.
     2. Keep holding the button down for 10 seconds, then release.

3. **Microphone**
   The built-in microphone is located on the rear of the device.
Package Contents

The following items should be included: If any of these items are damaged or missing, please contact your dealer immediately.

1. iCamera2 x 1
2. Stand x 1
3. Y-cable x 1
4. DC Cable x 1
5. Ethernet Cable x 1
6. RJ45 Cap x 1
7. Power Adapter x 1
Chapter 2

Basic Setup

This Chapter provides details of installing and configuring the iCamera2.

System Requirements

- To use the wired LAN interface, a standard 10/100BaseT hub or switch and network cable is required.
- To use the Wireless interface on the wireless model, other Wireless devices must be compliant with the IEEE802.11b, IEEE802.11g or IEEE 802.11n specifications. All Wireless stations must use compatible settings.

The default Wireless settings are:
Mode: Infrastructure
SSID: ANY
Wireless Security: Disabled
Domain: USA
Channel No.: Auto

Installation - iCamera2

Step 1 - Initial Setup

Initial setup is required when the iCamera2 is used for the FIRST time. It only needs to be done ONCE in order to configure the wireless settings for the iCamera2.

Note: Skip this section if the iCamera2 has been set up already.
1. Assemble the Camera
   a. Hold the metal screw of the stand up.
   b. Face the back of the iCamera2 to the stand and turn the iCamera2 clockwise to attach it to the stand.

2. Connect the Y-cable
   Connect the provided Y-cable (with Ethernet) to the LAN port of iCamera2.

   The wireless and wired modes cannot work simultaneously. It is recommended to first configure the wireless settings of an iCamera2 using wired mode. After configuration, disconnect the wire and power, and power on the iCamera2 again. Then, it will be ready for wireless operation.

3. Connect the Router
   Use the Ethernet cable to connect the Y-cable and connect the other end to the LAN port of the router.

4. Power Up
   Connect the supplied power adapter to the Y-cable and power up. Use only the power adapter provided. Using a different one may cause hardware damage.

5. Check the LEDs
   - The Power LED will turn on briefly, then start blinking. It will blink during startup, which takes 15 to 20 seconds. After startup is completed, the Power LED should remain ON.
   - The Network LED should be ON.
Step 2 - Installation

Figure 4: Installation

1. **Disassemble the Camera**
   Unplug the Y-cable and power off the camera.

2. **Connect the Ethernet cable**
   Connect the Ethernet cable to the LAN port of the iCamera2.

3. **Power Up**
   Connect the DC cable to the Ethernet cable.
   Connect the supplied power adapter to the DC cable to power up the iCamera2. Use only the power adapter provided. Using a different one may cause hardware damage.

4. **Check the LEDs**
   - The *Power* LED will turn on briefly, then start blinking. It will blink during startup, which takes 15 to 20 seconds. After startup is completed, the *Power* LED should remain ON.
   - The *Network* LED should be ON.

For more information, refer to *Physical Details - iCamera2* in Chapter 1.
Wall Mounting

*Note: Please ensure that the iCamera2 is configured and added to the network before permanent mounting.

1. Using hands to remove the plate from the bottom of the stand.

2. Place the plate in the desired position of the wall. Screw three screws into ceiling through the holes of the plate.

3. Attach the stand to the plate.
4. Connect the LAN cable into the LAN port of the device. Turn the iCamera2 clockwise to attach it to the stand.
5. Connect the other end of the LAN cable to the adapter through the holes of the stand. Adjust it to the desired position and secure the iCamera2 firmly.
Chapter 3

Viewing Live Video

This Chapter provides basic information about viewing live video.

Overview

This Chapter has details of viewing live video using Internet Explorer.

But many other powerful features and options are available:

- The camera administrator can also adjust the Video Stream, and restrict access to the video stream to known users by requiring viewers to supply a username and password. See Chapter 4 - Advanced Viewing Setup for details.

- To make Live Video from the camera available via the Internet, your Internet Gateway or Router must be configured correctly. See Making Video available from the Internet in Chapter 4 - Advanced Viewing Setup for details.

Requirements

To view the live video stream generated by the iCamera2, you need to meet the following requirements:

- Internet Explorer 7 or later, Firefox 3.0 or later.

Connecting to a Camera on your LAN

To establish a connection from your PC to the iCamera2:

1. Start Internet Explorer.
2. In the Address box, enter "HTTP://" and the IP Address of the iCamera2.
3. When you connect, the following screen will be displayed.
Figure 5: Home Screen

4. Click View Video.
5. If the Administrator has restricted access to known users, you will then be prompted for a username and password. Enter the name and password assigned to you by the iCamera2 administrator.
6. The first time you connect to the camera, you will be prompted to install decoders. Choose "I accept the terms of the license agreement" and click "OK".
7. Video will start playing automatically. There may be a delay of a few seconds while the video stream is buffered.
Connecting to a Camera via the Internet

You can NOT connect to a camera via the Internet unless the camera Administrator has configured both the camera and the Internet Gateway/Router used by the camera.

See Making Video available from the Internet in Chapter 4 - Advanced Viewing Setup for details of the required configuration.

Also, you need a broadband Internet connection to view video effectively. Dial-up connections are NOT supported.

To establish a connection from your PC to the iCamera2 via the Internet:

1. Obtain the following information from the Administrator of the camera you wish to connect to:
   - Internet IP Address or Domain Name of the camera.
   - Port number for HTTP connections.
   - Login (username, password) if required.
2. Start Internet Explorer.
3. In the Address box, enter the following:
   HTTP://Internet_Address:port_number
   Where Internet_Address is the Internet IP address or Domain Name of the camera, and port_number is the port number used for HTTP (Web) connections to the camera.

Examples using an IP address:

   HTTP://203.70.212.52:1024

   Where the Internet IP address is 203.70.212.52 and the HTTP port number is 1024.

4. When you connect, the following screen will be displayed.

   Figure 6: Home Screen
5. Click View Video.

6. If the Administrator has restricted access to known users, you will then be prompted for a username and password. Enter the name and password assigned to you by the iCamera2 administrator.

7. The first time you connect to the camera, you will be prompted to install decoders. Choose "I accept the terms of the license agreement" and click "OK".

8. Video will start playing automatically. There may be a delay of a few seconds while the video stream is buffered.
Viewing Live Video

After installing the decoders, you will be able to view the live video stream in its own window, as shown below.

![View Video Screen](image)

**Figure 7: View Video Screen**

There are a number of options available on this screen, accessed by select list, button or icon. See the table below for details.

**Note:** The options can only be configured while using IE browser. Other browsers can just view the video rather than configuration.

If the video still cannot be viewed, please install the decoders to solve this problem. You can install it from the following screens:

- View Video Screen (preferred)

![Install Decoders](image)

**Figure 8: Install Decoders**

- Motion Detection Screen
**General Options**

These options are always available, regardless of the type of camera you are connected to.

<table>
<thead>

Chapter 4  
Advanced Viewing Setup

This Chapter provides information about the optional settings and features for viewing video via the iCamera2. This Chapter is for the Camera Administrator only.

Introduction

This chapter describes some additional settings and options for viewing live Video:

- Adjusting the video image
- Controlling user access to the live video stream
- Making video available from the Internet
- Using the Motion Detection feature

Adjusting the Video Image

If necessary, the iCamera2 Administrator can adjust the Video image.

To Adjust the Video Image:

9. Connect to the Web-based interface of the iCamera2. (See Chapter 5 - Web-based Management for details.)
10. Select Administration, then Streamings. You will see a screen like the example below.

![Figure 9: Streamings Screen](image)

11. Make the required adjustments, as explained below, and save your changes.
<table>
<thead>
<tr>
<th>Default Streaming Channel</th>
<th>Select the default channel for streaming from the drop-down list.</th>
</tr>
</thead>
</table>

</tr>
</tbody>
</table>
| Max. Frame Rate | Select the desired Maximum frame rate for the video stream.  
The default value is 20. |
| **User Defined URI** | You may enter the URI up to 32 characters long for accessing the live video from camera through cell phone connection. |
Controlling User Access to the Video Stream

By default, anyone can connect to the iCamera2 and view live Video at any time. If desired, you can limit access to scheduled times, and also restrict access to known users.

To Control User Access to Live Video:

1. Connect to the Web-based interface of the iCamera2. (See Chapter 5 - Web-based Management for details.)
2. Select Administration, then Video Access.
3. Set the desired options for Access.

Access
Select the desired option as required:

- If the User Access is enabled, users will be prompted for a username and password when they connect to the camera for viewing video.
- When Video Access is enabled, viewing video is only available during the scheduled periods, and unavailable at other times. If this option is selected, you need to define a schedule; otherwise it is always disabled.

However, viewing video is still possible by logging in as the Administrator.

See Chapter 5 - Web-based Management for further details about using the Video Access and User Database screens.
Making Video available from the Internet

If your LAN is connected to the Internet, typically by a Broadband Gateway/Router and Broadband modem, you can make the iCamera2 available via the Internet. You will need to configure your Router or Gateway to allow connections from the Internet to the camera.

Router/Gateway Setup

Your Router or Gateway must be configured to pass incoming TCP (HTTP) connections (from Internet Viewers) to the iCamera2. The Router/Gateway uses the Port Number to determine which incoming connections are intended for the iCamera2.

This feature is normally called Port Forwarding or Virtual Servers. The Port Forwarding/Virtual Server entry tells the Router/Gateway that incoming TCP connections on port 1024 should be passed to the iCamera2. If necessary, check the user manual for your Router/Gateway for further details.

iCamera2 Setup

The iCamera2 configuration does NOT have to be changed, unless:

- You wish to change the port number from the default value.

HTTPS Port Configuration

Normally, HTTP (Web) connections use port 80. Since the iCamera2 uses HTTP, but port 80 is likely to be used by a Web Server, you can use a different port for the iCamera2. This port is called the Secondary Port.

The default HTTP/HTTPS Secondary Port is 1025. If you prefer to use a different port number, you can specify the port number on the iCamera2’s Network screen, as shown below.

![Figure 11: Network Screen](image)

See Chapter 5 - Web-based Management for further details on using the Network screen.

Viewers need to know this port number in order to connect and view live Video, so you must inform viewers of the correct port number.
Viewing Live Video via the Internet

Clients (viewers) will also need a broadband connection; dial-up connections are NOT recommended.

Viewing Live Video Using your Web Browser

If using your Web browser, you need to know the Internet IP address (or the Domain name) of the camera's Router/Gateway, and the correct port number.

Enter the Internet address of the Router/Gateway, and its port number, in the Address (or Location) field of your Browser.

Example - IP address:

HTTP://203.70.212.52:1024

Where the Router/Gateway's Internet IP address is 203.70.212.52 and the "Secondary Port" number on the iCamera2 is 1024.
Motion Detection Alerts

The *Motion Detection* feature can generate an Alert when motion is detected. The iCamera2 will compare consecutive frames to detect changes caused by the movement of large objects.

But the motion detector can also be triggered by:
- Sudden changes in the level of available light
- Movement of the camera itself.

Try to avoid these situations. The motion detection feature works best in locations where there is good steady illumination, and the camera is mounted securely. It cannot be used outdoors due to the sensitivity of the CMOS sensor.

**Note:** The Motion Detection settings can only be configured while using IE browser.

To Use Motion Detection Alerts

Using the Web-based interface on the iCamera2, select the *Motion Detection* screen, then configure this screen as described below.

1. Enable the *Motion Detection* feature.
2. Set the area or areas of the video image to be examined for movement. You can define up to 4 areas, and set the motion threshold individually for each area.
3. If using a schedule, define the desired schedule in *Trigger & Recording* screen.
4. Save your changes.

If the Motion Detection feature is enabled, but the related options in the *Trigger & Recording* screen are not enabled, then the only action when motion is detected is to log this event in the system log.
Chapter 5
Web-based Management

This Chapter provides Setup details of the iCamera2’s Web-based Interface.
This Chapter is for the Camera Administrator only.

Introduction

The iCamera2 can be configured using your Web Browser. The iCamera2 must have an IP address which is compatible with your PC.

Connecting to iCamera2

• If using only your Web Browser, use the following procedure to establish a connection from your PC to the iCamera2:
  • Once connected, you can add the iCamera2 to your Browser’s Favorites or Bookmarks.

Connecting using your Web Browser

1. Start your WEB browser.
2. In the Address box, enter "HTTP://" and the IP Address of the iCamera2.
3. You will then be prompted for a username and password.
   • If using the default values, enter administrator for the name, and leave the password blank.
   • Otherwise, enter the Administrator ID and Administrator Password set on the Maintenance screen.
Welcome Screen

When you connect, the following screen will be displayed.

**Figure 13: Welcome Screen**

The menu options available from this screen are:

- **View Video** - View live Video using your Web Browser. See *Chapter 3 - Viewing Live Video* for details.

- **Administration** - Access the Administration menu.
Clicking on Administration on the menu provides access to all the settings for the iCamera2.

The Administration menu contains the following options:

**Setup**
- System
- Network
- Wireless
- DDNS
- IP Filter

**Video & Audio**
- Streamings
- Video & Audio
- Video Access
- User Database
- Pan/Tilt

**Event**
- Motion Detection
- Audio Detection
- E-Mail
- FTP
- HTTP
- Trigger & Recording

**Administration**
- Maintenance
- Status
- Log
System Screen

After clicking *Administration* on the main menu, or selecting *System* on the *Administration* menu, you will see a screen like the example below.

![System Screen](image)

**Figure 14: System Screen**

### Data - System Screen

</table>
Network Screen

This screen is displayed when the Network option is clicked.

Figure 15: Network Screen
Data - Network Screen

<table>
<thead>
<tr>
<th>Network</th>
</tr>
</thead>
</table>
| **Internet Connection Type** | **There are 3 connection types:**  
- **Obtain Address Automatically (DHCP):** If selected, the iCamera2 will obtain its IP address and related information from a DHCP Server. Only select this option if your LAN has a DHCP Server.  
- **Static IP Address:** If selected, you must assign the following data to the iCamera2.  
  - **IP Address** - Enter an unused IP address from the address range used on your LAN.  
  - **Subnet Mask** - Use the same value as PCs on your LAN.  
  - **Default Gateway** - Use the same value as PCs on your LAN.  
- **PPPoE (PPP over Ethernet):** This is the most common login method, widely used with DSL modems. Normally, your ISP will have provided some software to connect and login. This software is no longer required, and should not be used.  
  - **Username** - The user name (or account name) provided by your ISP.  
  - **Password** - Enter the password for the login name above. |
| **Obtain DNS server address automatically** | **If selected, the iCamera2 will use the DNS address or addresses provided by the DHCP server.**  
This option is only available if the IP address setting is **Obtain an IP address Automatically.** |
| **Use the following DNS server address** | **Primary DNS server** - Use the same value as PCs on your LAN. Normally, your ISP will provide this address.  
**Secondary DNS server** - This is optional. If entered, this DNS will be used if the Primary DNS does not respond. |
### HTTP/HTTPS

This sets the port number for HTTP/HTTPS connections to the Camera, whether for administration or viewing video.

The HTTP (HyperText Transfer Protocol) is used for the standard of transferring files (text, graphic images and other multimedia files) on the World Wide Web. The default HTTP port is 60106.

HTTPS (Hypertext Transfer Protocol Secure) can provide more secure communication with the SSL/TLS protocol, which support data encryption to HTTP clients and servers. The default HTTPS port is 1025.

The Secondary port can be used for other service and when more than 2 cameras are in use.

If enabled, you can connect using either port 80 or the Secondary port. You must enter the Secondary port number (between 1024 to 65535) in the field provided.

Note that when using a port number which is not 80, you must specify the port number in the URL. For example, if the Camera's IP address was 192.168.1.100 and the Secondary port was 1024, you would specify the URL for the Camera as follows:

```
http://192.168.1.100:1024
```

### RTP/RTSP

The RTSP (Real Time Streaming Protocol), a standard for connected client(s) to control streaming data (MPEG-4) over the World Wide Web. Enter the RTSP Port number (between 1024 and 65535) in the field provided. The default RTSP Port is 554.

The RTP (Real Time Transport Protocol), an Internet protocol for transmitting real-time data such as audio and video.

Max RTP Data Packet field will let users limit the size of the file. Enter the desired value between 400 and 1400.

Note: RTSP and RTP settings are for cell phone only.

### Multicast RTP/RTSP

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Multicast</td>
<td>Enable the feature as required.</td>

<td>If enabled, the throughput level (for Video and Audio) is guaranteed through QoS (Quality of Service).</td>
</tr>
<tr>
<td><strong>DSCP</strong></td>
<td>Enter the desired value of Differentiated Services Code Point (DSCP). The value must be between 0 and 63.</td>
</tr>
</tbody>
</table>
Wireless Screen

This screen is displayed when the Wireless menu option is clicked.

![Wireless Screen](image)

**Figure 16: Wireless Screen**

**Data - Wireless Screen**

<table>
<thead>
<tr>
<th>Wireless Network</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site Survey</td>
<td>Click the &quot;Site Survey&quot; button and select from a list of available APs.</td>
</tr>
<tr>
<td>WSC PIN Code</td>
<td>It displays the WSC PIN code number for the camera.</td>
</tr>
<tr>
<td>SSID</td>
<td>This must match the value used by other devices on your wireless LAN.</td>
</tr>
<tr>
<td></td>
<td><strong>Note! The SSID is case sensitive.</strong></td>
</tr>
<tr>
<td>Domain</td>
<td>Select your region from the drop-down list.</td>
</tr>
<tr>
<td>Channel No.</td>
<td>• In Infrastructure mode, this setting is ignored. The iCamera2 will use the Channel set on the Access Point.</td>
</tr>
<tr>
<td></td>
<td>• For Ad-hoc mode, select the Channel you wish to use on your iCamera2. Other Wireless stations should use the same setting.</td>
</tr>
<tr>
<td></td>
<td>• If you experience interference (shown by lost connections and/or slow data transfers) you may need to experiment with different channels to see which one is the best.</td>
</tr>
</tbody>
</table>
### Security System

Select the desired option, and then enter the settings for the selected method:

- **Disabled** - No security is used. Anyone using the correct SSID can connect to your network. This is default.
- **WEP** - The 802.11b standard. Data is encrypted before transmission, but the encryption system is not very strong.
- **WPA/WPA2 Personal** - Like WEP, data is encrypted before transmission. WPA is more secure than WEP, and should be used if possible. WPA Personal is the version of WPA which does NOT require a Radius Server on your LAN.
- **WPA Personal (TKIP)** - WPA has solved the WEP problems with better encryption and authentication.
- **WPA2 Personal (AES)** - This is a further development of WPA Personal, and offers even greater security.

### WEP

**Authentication Type**

Normally this can be left at the default value of "Automatic." If that fails, select the appropriate value - "Open System" or "Shared Key." Check your wireless card's documentation to see what method to use.

**Note:** In *Infrastructure* mode, either setting will normally work, since most Access Points can use both methods.

**WEP Encryption**

Select the WEP Encryption level:

- 64 Bit Keys (10 Hex chars)
- 128 Bit Keys (26 Hex chars)
- 64 Bit Keys (5 ASCII chars)
- 128 Bit Keys (13 ASCII chars)

**Passphrase**

Enter a word or group of printable characters in the Passphrase box and click the "Generate Key" button to automatically configure the WEP Key(s). If encryption strength is set to 64-bit, then each of the four key fields will be populated with key values. If encryption strength is set to 128-bit, then only the selected WEP key field will be given a key value.

**WEP Keys**

- Use the radio buttons to select the default key.
- Enter the key value you wish to use. Other stations must have the same key values.
- Keys must be entered in Hex. Hex characters are the digits (0 ~ 9) and the letters A ~ F.
- Click *Clear Keys* to set the Keys to be blank.

**Test Wireless**

Click this button to test the wireless connection.

### WPA/WPA2 Personal

**Shared Key**

Enter the key value. Data is encrypted using a key derived from the network key. Other Wireless Stations must use the same network key. The PSK must be from 8 to 63 characters or 64 hex characters in length.
<table>
<thead>
<tr>
<th>WPA Personal</th>

</tr>
</tbody>
</table>
Many Internet connections use a "Dynamic IP address", where the Internet IP address is allocated whenever the Internet connection is established. This means that other Internet users don’t know the IP address, so can’t establish a connection. DDNS is designed to solve this problem, as follows:

- You must register for the DDNS service with a DDNS service provider. The DDNS Service provider will allocate a Domain Name to you upon request.
- The DDNS settings on the DDNS screen above must be correct.
- The Full HD IP Camera will then contact the DDNS server whenever it detects that the Internet IP address has changed, and inform the DDNS server of the new IP address. (The Check WAN IP Address determines how often the Full HD IP Camera checks if the Internet IP address has changed.)

This system allows other internet users to connect to you using the Domain Name allocated by the DDNS service provider.

This screen is displayed when the DDNS menu option is clicked.

Figure 17: DDNS Screen

</tr>
</tbody>
</table>
Video Access Screen

This screen is displayed when the Video Access option is clicked.

Data - Video Access Screen

User Access

Enable Security Checking
- If disabled (default) - No login required. Users do not have to provide a username and password when they connect to the camera for viewing video.
- If enabled - Require login. Users will be prompted for a username and password when they connect to the camera for viewing video. The camera administrator must use the "User Database" menu option to create the desired users.

Video Access

Enable Scheduled Video Access
- If enabled - Viewing video is available during the scheduled periods and unavailable at other times. If this option is selected, you need to define a schedule. If no schedule is defined, this option is always disabled.
- If disabled - The option will remain disabled until you enable it.

Note that regardless of which setting is chosen, the Administrator can ALWAYS access the camera and view live video.

Access Schedule

Scheduled Periods
This displays all periods you have entered into the database. If you have not entered any periods, this list will be empty.

Delete
Use the Delete button to delete the selected item in the list.
<table>
<thead>
<tr>

</tbody>
</table>
User Database Screen

This screen is displayed when the User Database option is clicked.

Data - User Database Screen

### Existing Users

**User List**

This displays all users you have entered into the User database. If you have not entered any users, this list will be empty. The maximum number of users is 20.

**Edit, Delete, Delete All**

Use these buttons to manage the user database.

### User Properties

**User Name**

Enter the name for the user here.
- Spaces, punctuation, and special characters must NOT be used in the name.
- The name is case insensitive (case is ignored), so you can not have 2 names which differ only by case.

**User Password**

The password for this user.

**Confirm Password**

Re-enter the password for the user, to ensure it is correct.

**Control Level**

Select either Viewer or Operator for the user you plan to add.

**Add Button**

Click this button to add a new user, using the data shown on screen.

**Clear Button**

Use this button to clear the input fields, ready to add a new user.
Pan/Tilt Screen

This screen is displayed when the Pan/Tilt option on the Video & Audio menu is clicked.

![Pan/Tilt Screen](image)

**Data - Pan/Tilt Screen**

<table>
<thead>
<tr>
<th>Pan/Tilt</th>
<th>Select desired option for the patrol function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preset Point Position</td>
<td>Click this button to define the preset point position.</td>
</tr>
</tbody>
</table>

**Set Patrol Sequence**

**Set Patrol Sequence**

This feature determines how the camera will move when it is set to either "Once" or "Always" rotate. You can set a number of Preset Positions; the camera will go to the first position, then move through the list of present positions until it is finished. The camera will stop at the last position in the list.

To create the Preset Sequence, select the desired Preset Position in the left column, and click the "Add >>" button. Repeat until the desired sequence is complete. Note that you can add the same Preset Position more than once; this can be used to make the camera stay longer at one position.

To delete a position from the Sequence, select the desired position and click the "Remove" button.

**Time**

This determines how long the camera will stay at each position while executing the sequence. Set this to the desired value.
Set Preset Position Screen

This screen is displayed when the Preset Point Position button on the Pan/Tilt screen is clicked.

**Data - Trigger & Recording Screen**

**Event Schedule**

| Schedule List | The Event Schedule shows all of the event types currently configured in the Waterproof HD IP Camera, along with various information about their configuration, as listed below:
| | • Name - the descriptive event name set by the user.
| | • Enable - shows the event is enable or disable.
| | • Trigger - shows what kind trigger activate the event.
| | • Actions - shows what kind of the actions will be issued when the event is triggered.
| Add, Edit, Delete | Use these buttons to manage the schedule list. |
Add a new Schedule

![Figure 31: Add schedule screen](image)

<table>
<thead>
<tr>
<th><strong>Name</strong></th>
<th>Enter the name of the schedule.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Schedule</strong></td>
<td>Choose the desired option:</td>
</tr>
</tbody>
</table>
| Schedule | • Always  
• Schedule  
• Never |
| **Trigger Event** | |
| **Trigger by** | • Motion Detection - Movement in a motion detection window can be used to trigger events.  
• Audio Detection - The sound detection can be used to trigger events.  
• HTTP Trigger - If checked, a HTTP CGI command will be delivered to the HTTP server.  
• Periodically - If checked, the events will be triggered at regular intervals of time.  
Interval - Select the desired interval from the list. |
| **Actions** | • HTTP - If checked, a HTTP notification will be delivered to the HTTP server.  
• E-Mail - If checked, an E-Mail (with "Attachment") will be delivered to the SMTP server. (SMTP Server must be configured on the E-Mail page.)  
• FTP - If checked, an FTP upload will be activated to the FTP server. (FTP servers must be configured on the FTP page.)  
• HTTP/HTTPS Post - If checked, a HTTP notification will be delivered to the HTTP post server. |
| Attachment Type | • **Pre/Post Capture** - Select the desired length. The size of the file depends on this setting, and also the Video size and degree of compression. |

Chapter 7

Troubleshooting

This chapter covers the most likely problems and their solutions.

Overview

This chapter covers some common problems that may be encountered while using the iCamera2 and some possible solutions to them. If you follow the suggested steps and the iCamera2 still does not function properly, contact your dealer for further advice.

Problems

**Problem 1:** I can't connect to the iCamera2 with my Web Browser to configure it.

**Solution 1:** It is possible that your PC's IP address is not compatible with the IP address of the iCamera2.

**Problem 2** When I try to connect to the iCamera2, I get prompted for a user name and password.

**Solution 2** You SHOULD be prompted for a user name and password if trying to access the Administration menu. Enter the Administrator ID and Administrator Password set on the Maintenance screen.

If you are just trying to view Video, the User Name/Password prompt indicates that the Administrator has restricted access to specified users. Ask the Administrator for your User Name and Password.

**Problem 3** I can't connect to the iCamera2 using a Wireless connection.

**Solution 3**

1) If a LAN cable is connected to the LAN port, the Wireless interface is disabled. Only one interface can be active.

2) Check that your PC and the iCamera2 have compatible Wireless settings.

   - Mode (Infrastructure or Ad-hoc) must be correct.
   - ESSID must match.
   - WEP settings must match.
   - In Ad-hoc mode, the Channel should match, although this is often not required.

**Problem 4** Video quality may suddenly deteriorate.

**Solution 4** This can happen when an additional viewer connects to the iCamera2, overloading the camera or the available bandwidth. The image size and quality can be adjusted to cater for the required number of viewers and the available bandwidth.
**Problem 5** The motion detection feature doesn't send me any E-mail.

**Solution 5** It may be that the SMTP (Simple Mail Transport Protocol) server used by the camera to send the E-Mail will not accept mail. (This is to prevent spam being sent from the server.). Try using a different SMTP server, or contact your ISP to see if SMTP access is being blocked.

**Problem 6** Using the motion detection feature, I receive E-Mails which don't show any moving objects.

**Solution 6** The motion detection feature doesn't actually detect motion. It compares frames to see if they are different. Major differences between frames are assumed to be caused by moving objects.

But the motion detector can also be triggered by:

- Sudden changes in the level of available light
- Movement of the camera itself.

Try to avoid these situations. The motion detection feature works best in locations where there is good steady illumination, and the camera is mounted securely. This feature can NOT be used if the camera is outdoors.

**Problem 7** The image is blurry.

**Solution 7** Try cleaning the lens, or adjusting the Video Quality Control setting on the Streamings screen. Video created by the lower settings will contain less detail; this is the trade-off for using less bandwidth.

**Problem 8** When is the best time to press WPS button?

**Solution 8** If there is no cable connected, you can press the WPS button after the Power LED starts blinking.

**Problem 9** In some older Window XP systems, it may not be able to see H.264 video streaming.

**Solution 9** In order to view H.264 video streaming in the older Window XP systems, please install the Microsoft .net framework 2.0 or later version, so the system will be able to deploy the built-in H.264 decoder of the camera.

**Problem 10** I use the camera via IE browser in protected mode of Windows Vista/7, there is no local recording/setup feature to be used. Even if I run it with IE browser in non-protected mode of Windows 7, the folder like "Windows" still can not be accessed. (There is no recording files found in this folder as well)

**Solution 10** There will be no local recording files and the setup service of associated folder if the IE browser is in protected mode.

To use the local recording feature, please operate IE browser in non-protected mode.

**Note!** Some folders (ex. “Windows” folder) with high integrity level can not be accessed via non-protected mode of IE in Window 7.

Regulatory Approvals

FCC Statement
This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example - use only shielded interface cables when connecting to computer or peripheral devices).

FCC Radiation Exposure Statement
This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
IC Approvals

CAN-ICES-3 (B)/ NMB-3(B)

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Déclaration d'exposition aux radiations:Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

CE Approvals

This is a Class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
